Source record: 76208

FM is fine for the AB amps, The only thing is that you get beter efficency if you use class C for that mode. Most FSK and RTTY modes are a form of FM in the sense that they can use the class C amps. One problem with using the FM mode to tune an amp is that if there is any audio modulation on the carrier it is not a legal mode (for the most part) below 30 mhz. The RTTY mode will normally put out a single frequency (untuil data is being sent) at the power level the transmitter is set for just as switching to the cw mode and closing the key.

Source record: 76209

On my 756 I keep a shorted 1/4 inch plug in the CW key jack. When I want to tune my amp, I simply hit the CW mode button which sends a continuous string of dits at 60 wpm. When I'm done tuning, I hit the ssb mode button and I'm ready to go. Works great for me.
Please reply DIRECT by removing the words "nospam" from my address

HI All,

I have for sale a nice Yaesu FT-900AT HF radio. Looks and works 100%!! I reciently sent it in to yaesu for check out and updates a few months back. This radio has the built in auto tuner and is very fast and from a non smoking enivironment.

I have the remote mounting kit for it also if you want to remote the head for mobile application. (This has not been used).

$750 plus shipping.

Thanks

Hm. Don't know the FT-920, but DB-25 to DB-15 isn't all that common is it?
DB-15 is pretty much a monitor connector. DB-9, now is a different story,
and is commonly used for serial interfaces.

Little late on this reply but... I picked up a Statpower Portawattz Powerpac
at Sams. It was used at Field Day with good success for QRP work. It has an
18 ah gel cell and also has an ac inverter built in. Comes with charger,
cigarette lighter socket, and auto jumper cables, for about $100. 18ah
should be enough to keep your 706 going for several hours at low power and a
moderate xmit duty cycle.

It's been a long time, but as "I recall" the DTR 2000 uses a voltage doubler in the power supply, so under continuous key down the voltage will drop to something like 2200 or a little less. Maybe even 1900-2000.

The caps could certainly be dried out after this long but you didn't say how low the voltage dropped. However I don't recall any of the old Dentron amps running any where near 3000 volts. (I could be wrong, but I don't remember any that high)

It seems like there was a tune position and when loaded fully there, they worked fine at full power.

Having the manual would certainly help.

I had two of the things on the air, but I was a dealer back then and that was over 20 years back.

> key the amp.

There are two methods for tunning up to get full power out and it depends on the amp.

Those amps that use voltage doublers in the power supplies, need to be tunned in the tune position as the plate voltage and current are such that when switched to full the system will be at full power.

Tunning them at full power, or I should say trying to tune them with key down, steady state allows the PS voltage to drop (substantially) to the point where the amp is not properly tuned for SSB, or recular CW.

For those with good heafty powersupplies that do not use voltage doubling, just stick a straight key in the jack and close it.

I've found that a station monitor scope will allow setting the amp to full power running a string of dits at high speed. the same is true for a peak reading output meter.

Good luck,

Roger (K8RI)

2231. Re: HTX-202 Err2

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-04 00:00:00 UTC
From: Joe Leikhim <jleikhim@nettally.com>
Message-ID: <39622E6E.D6416EF2@nettally.com>
Source record: 76234

Could be the temperature inside the case is elevated by both the PA and the battery charging circuitry. The VCO is temperature sensitive and possibly drifting out of the PLL steering line range. If possible try adjusting the VCO tank circuit when the radio goes out of lock. It would be best to have the service manual handy so that you know what the steering line voltage should normally be.

Randy Thomson wrote:

That wouldn't work to my boom box in the garage though, it only goes to
another stereo. And I don't need to pay for the video, when all I need is an
audio stereo transmitter.

I did find a simple inexpensive stereo transmitter at
http://www.allelectronics.com/cgi-local/SoftCart.exe/online-store/scstore/p-
SB-100.html?E+scstore

But it's probably a single chip design and I'm not sure about the quality or
stability.

Yes, thanks, that appears to be just what I was looking for, except for
possibly the range, as you mentioned. Radio Shack said they didn't have
anything like it when I called. Wonder what the range on these is?

Just searched their site and couldn't find anything about specs on it. I was
looking for output wattage. If it was 100mw, it could work around the
house, with a decent antenna.

It's lower than 100 mw. The specifiactions page on the site lists it
as (-18dBm).

Some time ago I purchased one to use at work. Seems to have a range
of about 24 inches up to 36 inches -- under ideal conditions.
It does one thing really well.. it digests batteries.

Oh.. if you return to their site the catalog number is: 12-2051.

I have some real GOODIES for SALE......Will be moving soon....

ICOM STUFF..............

1. I HAVE A VERY NICE ICOM 756 HF, & 6 METER TRANSCEIVER. S/N 001311
I AM THE ORIGINAL OWNER, AND A NON SMOKER, IT HAS 2 OPTIONAL FILTERS
FL-223 9 MHZ 1.9 KHZ SSB FILTER, & FL-222 455 KHZ 1.9 SSB FILTER.
I HAVE THE ORIGINAL BOX,MANUAL, PACKING, POWER CABLE, AND HAND
MICROPHONE $1399.00 PLUS SHIPPING IN THE US ONLY

2. I have for sale a very nice ICOM 575H 100 WATT 6/10 METER ALL MODE,
TRANSCEIVER, WITH ORIGINAL BOX, MANUAL, HAND MICROPHONE, ALL ORIGINAL
PACKING. I AM THE ORIGINAL OWNER, NON SMOKER, LOOKS AND WORKS GREAT
OPTIONAL VOICE SYTHESIZER, ANDTHE AM FILTER. ... $915.00 SHIPPED, &
INSURED IN THE US ONLY..

3. I have for sale a very nice ICOM 275H 100 WATT 2 METER ALL MODE,
TRANSCEIVER, WITH ORIGINAL BOX, MANUAL, HAND MICROPHONE, ALL ORIGINAL
PACKING. I AM THE ORIGINAL OWNER, NON SMOKER, LOOKS AND WORKS GREAT
OPTIONAL VOICE SYTHESIZER, AND I THINK I ALSO HAVE THE CW FILTER. ...
$915.00 SHIPPED, & INSURED IN THE US ONLY..

4. Icom SM-6 desk micrphone $50.00 shipped

HEATH KIT STUFF.....................

5. HEATH KIT HW-22 40 Meter SSB transceiver. " THIS IS A HEATH KIT
COLLECTORS DREAM RADIO" I bought it from a avvid Heath bulider, that
assembled it used it once , and put it on the shelf, and covered it.
It is in "LIKE NEW " condition, and I have the matching Heath Kit
power supply, Heath hand micrphone(white), and mobile mounting
bracket $185.00 shipped US only

6. HEATH KIT HW30 TWOER 2 meter am transmitter, again this was from
the same guy as the HW-22, assembled used once, and put on the shelf.
It is in "LIKE NEW" condition, with the matching Heath microphone, and

AC cable. $85.00 shiipped US only

7. Heath AM-2 reflected power/swr bridge $40.00 shipped in US

KENWOOD STUFF.............................

8. Kenwood IF-232C interface unit (2) left $75.00 @ shipped in US
Comes with data cabel, and copy of instruction manual
Can be used with the TS-140,680,440,940,850,450,690,950
9. Kenwood IC-10 (chip set) $40.00 shipped, used with the TS-440S, &
R-5000

10. Kenwood TU-6 tone unit for the TH-21,31,41 handhelds $40.00
shiipped
11. Kenwood TU-4C tone board for the TW-4000A $40.00 shipped
12. Kenwood YK-88C 500 hz CW filter for the TS-120S,130S,130SE, 430S,
440S, 530S, 530SP, 670S, 180S, 830S, 660, R-5000 $69.00 shipped
13. Kenwood YK-88CN 270 HZ CW filter for the TS-130S,130SE, 430S,
440S, 530S, 530SP, 830S, 670S, 660, & R-5000 $69.00 shipped
14. Kenwood MA-5 HF antenna 10,15,20,40, 80 meters in great condition
with carrying cloth case with manual $125.00 plus shipping
15. Kenwood MS-1 mobile stand for a TR-2500 handheld $25.00 shipped
16. Kenwood SMC-25 speaker mic for a TR-2500 $22.00 shipped

17. CUBEX matching transformer "new in the box" for a 2 element
cubical quad 10,15,20, and capable of 12, & 17 meters model number is
2229 of maybe its the serial number

PALOMAR STUFF.....

18. Palomar PT-310X preamplifier $40.00 shipped
19 Palomar PT-340 Tuner Tuner $40.00 shipped
20. Palomar Noise Bridge $35.00 shipped

YAESU STUFF.....

21. YAESU YC-500J frequency counter $70.00 shipped
22. Yaesu black speaker that matches the 300 series for $20.00 shipped
23. Yaesu LL-301 phone patch $40.00 shipped

24. Collins 189A-1 phone patch for the KWM-1 $40.00 shipped in good
condition with a very small switch..

73, & Thank You

Just about any computer shop, Fry's, CompUSA, etc. It's just a standard
serial cable with a DB-15 male on one end and a DB-25 (or a DB-15 depending
on your computer COM port connector) female on the other.

Melissa, RadioShack has an item I think will handle what you are
seeking. However, at $99.99 it may not fit in the 'inexpensive'
category.
It's a 2.4 gHz transmitter / receiver package which can be used to
transmit video and stereo-audio from one device to another.
The average range is about 100 feet; that will vary dependent upon
the construction materials between the two units.

The catalog number is: 15-1971. You can see a description online at
<
http://www.radioshack.com/ProductCatalog/ProductDetail/Index/1,2098,,00.html?SKUString1=15
&SKUString2=1971
>

Btw, it's a long URL.
If you go to the RS home page and type the catalog number into the
search box, you will be brought to that page.

Disclaimer: I am not an employee of RadioShack.

Hope this helps.

2251. Keying Linear Amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-04 00:00:00 UTC
From: Dick Hughes <ragoldhughes@worldwingnet.att.net>
Message-ID: <ctq2ms8ojm8vp14pnh527aoqemmmmpjhvv@4ax.com>
Source record: 76290

Years ago, when I wanted to key a linear amp for tune-up, I could just pull the key out of the transmitter and turn on transmit which would key the amp. Today's rigs don't have a closed circuit key jack. The only options I see for my IC-736 are to hold down a hand key in CW, or use the FM position for tune-up. It looks like FM is the best option. AM doesn't have enough power to drive the linear to full output. What do others use today to temporarily key an amplifier?

For Sale: Drake L-4B with Custom Power Supply!

This is a near-MINT Drake L-4B with custom power supply you have to see to believe. The RF deck is near perfect...looks new. The power supply was built by an RF design engineer who spent over $1000 in parts just for the power supply...including a large Peter Dahl power transformer. His craftmanship is beyond compare. He only used the highest quality parts and the case is built like a Sherman tank. This amp can easily exceed full legal power and run comfortably all day. If you're looking for a great amp, this is it.

Asking $1000 plus shipping or best offer.
Includes manual and HV cable.

Take a look at Radio Shack's Wireless CD Adapter. Page 327 of their 2000 catalog. $39.99. Looks like it plugs into the headphone jack on the PC. Seems like I saw one at Wal-Mart too, a few months ago which may have only been around $20.00. You may want to buy it with the understanding that you can bring it back if it doesn't work out for you as I would guess the range for these things is quite limited.

There has been many debates as to "which is better"...FT-100 vs. IC-706.
It would be interesting to read "WHY"...the reasons you would trade
the FT-100 for the IC-706.

> Thanks for any info -Gary

One antenna you might consider is a groundplane for 2 meters.

You take an chassis connector. point the threaded side down and solder a quarter wave wire into the end and solder some stiff wire (coathangers?) into the corners (make these about 10% longer, although the length is not really critical. These wires go in the same direction as the threaded end. orient them at about 45 degrees. Connect the coax and glop it up thouroughly with liquid electrical tape to keep the water out of the coax. Neither the chassis connector or the PL259 on the coax are weatherproof.

You end up with a quarter wave vertical that has a 4 leg stand. Quick, easy, and cheap.

When I was working I made one of these. I set it on top of the shop building and snaked a piece of RG58 down through the airconditioning room and into the shop. That put the antenna about 40 feet above the ground. Even with the rather lossy coax I could easily work 30 miles using my HT from the instrument shop.

We used it to monitor the local repeaters during storm watches.
BTW. Radios were banned in the plant, but I was allowed to keep it due to the rapid updates of weather on the repeaters.

Unfortunately, the last year I was there they got a new head of safety and security. He saw no need for the radio as he had a weather monitor and that, being an official government service had to be the best. <:-)) I never could convince him that in Lower Michigan the weather warnings were generaly about 10 minutes behind the sightings. The average tornado, in Michigan, lasts less than 10 minutes.

How 'bout an audio cable from the line-out of your computer sound card to the aux input jacks on your stereo.
It's not transmitting, but it's cheap and will have better fidelity than any transmitter.

I have an Icom AT-150 auto tuner (line flattener) that matches my IC-735 and it works pretty good within its specification, which I believe are swr below 3.1:1 I think it trips out to protect itself if above that point, or the red tune light does not go out and you are supposed to do some antenna adjustments. I only use it with the barefoot radio and a beam antenna that that is pretty much under 2.1:1 edge to edge on all bands. Other posters were correct in that the heavier tuners, such as MFJ-986, will provide a match to the rig on a wider assortment of mismatched antennas. The SGC couplers will out do the Icom tuners on end fed wires and loops, but I have also had pleasantly good luck with the Icom AH-4 coupler in this regard, and it mates perfectly with my 706's (but gave up 160 to get 6 meters).

Source record: 76111

I have had (and still have) many Astrons. I find that the 'hummers' usually just need a good stiff whack with a rubber mallet to re-seat the two sections of the core, and than a good coat of dope or laquer to hold 'em together. If you look at the transformer, you can see the break where the two pieces come together.

It seems that sometimes, the transformer doesn't get bolted down evenly, or it just plain takes a 'whack' in shipping, and it only takes a little separation to make a lot of hum!

BTW, when you replace your '723's, spend the extra two bucks and put in the metal can chip!

Source record: 76112

Hello, Jerry!

Two things: 1.) Make sure that you're using at least 10 gauge wire from the battery to the rig.

2.) If you have the high-output alternator, it tends to be fairly weak at idle, and if the AC doesn't tell the idle to come up, you'll probably see as little as 10.5 volts at the radio at idle. While the radio 'will' play at this voltage, as soon as you kick into transmit, the additional current draw pulls down the voltage, and the current increases to deliver the same amount of power, and the voltage drops....anyway, you get the idea.

I have found that the easiest cure for this is to add a BIG cap in line with the radio. 1 farad @ 75 volts is pretty successful...just buy them from an electronics supplier and not an auto audio supplier (try MCM).

73!

This is a memory stretch so take it as an opinion with a reasonable
chance of being correct. I believe you are talking about the filter
which is cylindrical in shape with SO239s at each end. I also recall
that there was an adjustable cap for the end sections. I believe these
were intended for use only on the HF ham bands so the upper cutoff
frequency was above 10M but below 6M.

TYPO! It's an SB-220 not 202.

Thanks,
Dan

2278. Tech question - AM/FM digital radio

Newsgroup: rec.radio.amateur.equipment

I'm looking for an answer to a problem that I have had with my last five digital AM/FM stereo pocket radios. All five of them have died the exact same death. Two of them were Radio Shack Optimus radios and three of them were Sony SRF-M32 Walkmans. They all ran on two AAA batteries. The Optimus has a small external speaker (which I never used), and the Sony radio does not. These radios were priced in the $30 to $40 dollar range and performed exceptionally well at first. I used each of these radios for about 3 to 5 hours every day with a variety of quality headphones or earbuds. 95 percent of the time I listened to FM music stations, a lot of the time I had the volume up fairly loud. Battery usage was excellent on all of the radios (using Duracell Ultra's). Now my problem: after about 3 or 4 months each of these radios lost output on the left "speaker". The loss was gradual, but quick, and after a short time the left channel just quit. So of course I am puzzled by this pattern of malfunction. I really need a radio like this for my job, but I don't want to waste any more money. So, first of all, why are my radios konking out like this? And is there a quality pocket digital AM/FM stereo on the market that I can depend on? Thanks in advance for any help.

Martin S. in Arizona.

Lee I had all kinds of trouble with my 2600 losing memory
until I finally connected the power cables directly to the battery.
Seems the radio is real sensitive if the voltage drops much at all.

Edward is right about it being a good idea to turn the radio off
before starting your engine. (But I don't always do this either).

Are there any mods out there for these two small HT's (mtr & 440mhz)

Am looking for extended transmit modifications beyond the stock MARS/CAP mod
to use the rigs with transverters.

Also, anyone tried out the new HTX-245 dual band HT?

73,

Gary N7ARE

From: Tom M <tjmc@erols.com>
Message-ID: <39634383.CC20B952@erols.com>
Source record: 76158

Looking for a CW filter for an Icom 725...They use either a FL100 (500hz) or Fl101 (250hz).

So, anyone have a used one for sale OR can they tell me if the current listing for the FL100/101 is still the same filter from '92.

Tnx
Tom aa2vk

2286. Re: Icom Automatic Antenna Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-05 00:00:00 UTC
From: Reg Edwards <G4fgq.Regp@btinternet.com>
Message-ID: <8jtt3v$5gg$1@neptunium.btinternet.com>
Source record: 76159
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

Although I am quite capable of designing my own manually operated antenna L and C impedance matching networks, I have found over a period of years that the Icom automtic tuners perform according to the manufacturer's specifications. Before purchasing a tuner the specifications should be read and understood.

I use Icom-manufactured tuners because I am too old, incapacitated and lazy to make my own. I have used three different models for 3 or 4 years. There have been no electronic faults in the control system.

It should also be borne in mind I have never exceeded the maximum through-power rating.

I have not the slightest connection with Icom except that I have purchased that manufacturer's equipment without complaint.

There isn;t a single 2" antenna that performs as well as their 7-inch
counterparts.

Just know the limitations - and don't "over-expect" from the stubbies!

They're great for stadiums and malls and parks - just know their
limitations goin in to your use!

2301. Using Grove Scantenna for 2 meter transmission???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-05 00:00:00 UTC
From: Gary Chandler <ggchandl@bellsouth.net>
Message-ID: <3962CE35.A95FB65A@bellsouth.net>
Source record: 76174

Hi,
I am very new to ham and also on a limited budget so my question
is about getting started with a very cheap antenna setup. I have
a Scantenna mounted about 40' up in a pine tree in the front yard
that I use for my scanner and it works pretty well. It is multiband,
from 30-1300 MHz. Just how well would this work for 2 meter
transmission until I can afford a real antenna? Is this just a plain
bad idea and should I go with a homemade verticle dipole instead?
Thanks for any info -Gary

Jerry sounds to me like your not getting enough current, unsure what size wire your using to connect but with long runs you need to check the current loss!

2304. Kenwood TM-D7A(G) same as TM-D7E Version 2 ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-05 00:00:00 UTC
From: Hugo pa4la <pa4la@pi4cc.nl>
Message-ID: <8jv4ka$k20$1@news.kabelfoon.nl>
Source record: 76177

Could anyone tell me if the firmware of the Kenwood TM-D7A(G) the same is as TM-D7E Version 2 (also 9600 bd)

In other words: Do you get the TM-D7A(G) after modifying (diodes) the TM-D7E Version 2

tnx

Hugo PA4LA

Try http://www.nteinc.com/ then pick semiconductors under cross reference.
on the next page key in your part number and your results are NTE
replacements.

All four of yours came up with data.

Well, one never knows, but this Scantenna probably won't be resonant
on 2 meters. If it's some type of amplified antenna, you may burn
something up if you transmit through it.

You say you're on a limited budget -- that's cool, you can build a
dipole for nothing. Two pieces of nineteen inch wire, connected to
coax. Or a j-pole. Or a little ground plane, with 5 pieces of wire
soldered to a coax receptacle. There's lots of ways to go that won't
cost much of anything.

Check the voltage at the radio versus the battery terminal voltage under load when the radio is keyed. That will tell you whether the problem is in the car system or the radio installation.

Does anyone have the spec sheet or the filter ad in the back of an old EFJ rig manual. I need to know the frequency range the filters were rated for (especially the upper end). Any info would be highly appreciated. If anyone has the original spec sheet, I'd love a faxed copy! Pls email me: toomuchstuff@pobox.com . TIA

2317. FS: OptoTrakker Decoder!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-05 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <vnJ85.25054$fR2.226619@news1.rdc1.mi.home.com>
Source record: 76190

FOR SALE:

Like brand new, complete with box, manual, software!
ONLY: $250.00 shipped within the U.S.!

Bill Crocker

Mfg. Site: http://www.optoelectronics.com/optotrakker.htm

The Optotrakker is a communications decoder that when interfaced to a computer, will quickly and easily turn a number of receivers into a trunked radio tracking receiver. The Optotrakker can also interface to virtually any receiver for the decoding of CTCSS, DCS, LTR, Motorola Type I and II, and DTMF, in a non-PC application by displaying data on its two line LCD display.

WHAT CAN THE OPTOTRAKKER DO FOR YOU ?

The Optotrakker used with the supplied TrakkStar Windows software, is the first and only product that can scan multiple types of trunking systems on any frequency band at the same time. The Optotrakker allows you to now scan Motorola 400MHz, 500MHz, 800MHz systems, as well as the 900MHz systems, simultaneously with rapid speed and data capabilities. Using an exclusive pass through technology, interfacing with future receivers will be easy as the Optotrakker requires the use of only one com port. Supports ICOM R7000, R7100, R8500, R9000, R10, AOR AR8000, and AR5000.

Decodes CTCSS, DCS, LTR, DTMF and Motorola talk group ID's
Scan multiple trunked systems simultaneously
All trunked frequency bands supported, including 400MHz, 500MHz, 800MHz, and 900MHz
Interfaces to virtually any receiver when not under computer control
Supplied with TrakkStar Windows trunk decoding software
Built-in Data Slicer for decoding of FSK programs
Two Line LCD display
Interface cables supplied with OptoTrakker

Power 7 - 15VDC
Size 1.8" high x 4.5" wide x 4" deep

Discriminator audio audio modification to receiver may be required.
Software Requirements:
Windows 95 or 98, (Windows 3.11 not supported)
IBM PC compatible, 486/586,
VGA display, mouse and hard drive.
Minimum RAM: 8 megabytes.
One serial port required.

Within the last year there was a good article in QST on how to convert a
D104 to work with a modern rig. Even a kit available.

Based on that article I modified the Astatic mic I recently recieved.

My D104 had the TUG8 base containing an amplifier, which I reconfigured for
"floating" ground and to be powered by the microphone line. I get great
audio reports.

You need to also run the negative lead directly to the battery, not just the positive lead. Both leads directly to the posts on the battery, and 12 gauge wire should be large enough, but 10 gauge would be better. Running the negative lead to the nearest ground point does not gaurentee a good current path back to the battery. Also with a lot of current draw on the battery, the negative battery lead to ground may be dropping too much voltage for your radio to opperate. Most of the radios are designed for 13.2 volts, and not 12.

Tom

Do NOT use either one of these--they are a waste of $!!!! There is a newer antenna that is made by NGC which I think is now Comet or they bought them--sorry--don't know the model number of it--24 something? Anyway, it is about 3" long, SMA mount, soft rubber about 1/2" diameter from top to bottom. This antenna smokes the stubby ones you mentioned, but it does get hot on long high power key downs. It is almost as good as stock and I normally use this antenna and carry the long 20" wimpy little SMA-24 whip tied in an overhand knot in my shirt pocket for farther out. I got the antenna at ComDac in St. Joseph, MI. About $24.00.

2332. Standard C-1208DA problem...?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-06 00:00:00 UTC
From: Mark Wilson <ac892@osfn.org>
Message-ID: <3kv9msc3rhchd4costh37kt3eu894jiugv@4ax.com>
Source record: 76055

Hello everyone...
I have a Standard C-1208DA 2 meter radio.
Anytime I switch bands to receive in either 400Mhz or 800 Mhz,
the ENTIRE display blinks and I can not receive anything...?
This ONLY happens on 400 and 800 Mhz...?

Does anyone else have this radio or has anyone else experienced this ?
I know this radio used to receive in these bands without a problem...
I reset the microprocessor but it did nothing.

I enjoy being able to listen to the local police on 400Mhz...
Unfortunately, I can't anymore...

Other than this, the radio works fine.

Any input or suggestions would be appreciated.

Thanks !
Mark / ka1mla

BEWARE BEWARE

Use caution before sending equipment to Electronics Unlimited in Lake Park Florida.
I sent my ICOM in for repair in late April and cannot get it back. The phone is disconnected and the address is Postal A Express, a drop box service.
It's a shame that ICOM has them listed as an authorized service center.

Any similar experiences/stories would be appreciated. I have filed complaints with Icom the Florida Attorney General and the BBB in West Palm Florida.

The Regency RH256B radio transmits/receives from about 140-155 Mhz w/ 15-25 watts out and PL encode/decode. This radio has been optimized for the amateur radio two meter band (144-148 Mhz). The radio is field programmable by flipping a toggle switch on the back of the radio to the "programming" setting. For more information and photos, please follow link below:

Be careful if interested in this offering.

The PA-6 (according to Yaesu) is intended for 23R-33R-73R, 411-811-911, and the 470 models. Most of these are the older models. If you have one of the newer radios you would be interested in the EDC-5B, EDC-6, or EDC-15.

2350. FS: Icom IC-03AT

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-06 00:00:00 UTC
From: ghopper@eskimo.com
Message-ID: <ghopper-0607002342400001@07-155.009.popsite.net>
Source record: 76073
Cross-posted to:
rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.swap,rec.ham-radio.swap,rec.radio.amateur.equipment

Icom IC-03AT

Includes: Radio, antenna,(2)BP-3 batteries, wall charger and copy of
manual.

$180.00 including insurance and priority shipping to your door in the lower 48.

The radio is in good to good very condition (some wear from use but
nothing more than very minor cosmetic wear) One battery holds a charge but
it is not in "new" condition by any means. I get close to a full day's use
out of it. Battery two seems to be at the end of its life but these
battery cases can be opened without destroying them and new cells replaced
for the old ones.

I'll thrown a non-icom hand mic that was included when I bought the radio,
but I never used. I am selling the radio because I just got a mobile 220
that serves the purpose the HT filled before. Also, I have a copy of the
manual and I thought I had the original but it isn't in its file and no
where in the shack. If I find it, I'll include it (even if it's after the
sale.)

I can provide a picture for interested parties.

Payment via cashier's check or postal money order. The radio will be
shipped the day I get payment.

For the price police: Yes, I know that there are other newer 220Mhz radios
out there. But really have you looked at the construction or what you get
for your money?

email if interested

From: Mike Fallavollita <mikef@microtech.com>
Message-ID: <sm8cmi23gas83@corp.supernews.com>
Source record: 76130

I'm considering upgrading my HF rig from a Kenwood TS-430 to a Yaesu FT-900AT. Would anyone like to express their opinions of the radio? I'm very interested in the possibility of using the separation kit and running the rig from a different room in the house. Has anyone tried this? Is there a distance limitation?

Any opinions would be welcomed.

Thanks.

Sounds like the phones sockets were getting contaminated with dirt.
The left channel on a jack plug is usually the tip, so when you insert
the plug into the radio it sometimes carries in a little muck.
Eventually this will build up in the socket and stop the plug tip
making contact. Solution - open the radio case and clean or replace
the headphoones socket.

To my knowledge, Gary, there are NO Mods for these radios. they were made for Radio Shack to be that way. The pan is based on the old ICOM IC2AT radios and although those were modifiable the Radio Shack models are not to my knowledge. A better location or newsgroup to list this post to would be alt.ham-radio.mods and you might try relisting your question there and might find someone that has actually worked out a mod to this radio.

You didn't read his post... He said the 200, NOT the 202. The 200
is NOT the derivitive of the Icom made by Maxon! And it wasn't the
2AT in any case.

The 202 was not modifiable, I've heard rumors of a few mods floating
around for the 200, but I don't know of any that were 'verified'.

2365. Think twice about buying Larsen antennas. Company has been sold.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-06 00:00:00 UTC
From: Dante <dante@theinferno.com>
Message-ID: <s%%85.32$w4.4144@petpeeve.ziplink.net>
Source record: 76137

I just went to order a new coil for my Larsen 5/8 wave, two meter antenna. I've been buying Larsen antennas since 1979, and would not consider any other brand. Their customer service was top notch, and they went out of their way to make sure that my needs were met if I had a problem. They even shipped parts from the factory if I couldn't find them at the local ham outlet. Their attitude earned my loyalty - every mobile antenna that I own (seven of them) is a Larsen.

Anyway, last week I noticed that the loading coil on the 2 M antenna had cracked in a few places around the bottom of the coil. Wanting to replace the coil before I blew up my finals, I called Larsen, expecting them to replace it under warranty. The last coil that cracked ten years ago was replaced without hassle.

This time, the clerk asked how old was the coil. When I estimated "around 5 years", she quickly retorted that it was out of warranty, and that I'd have to buy another. When I told her to ship me one, she further related that they now had a $100 minimum order, and only wanted to sell to dealers. She indicated that the company had been sold, and that they had implemented new policies.

When I called the dealers that she suggested, they told me that they didn't carry parts, and that I would have to order a complete antenna. After making five phone calls, I still don't have a loading coil.

In short, it seems obvious that Larsen doesn't want to service the ham community anymore, and doesn't stand behind their products. Getting parts is a frustrating experience, and they don't seem to care about customers.

I'd suggest looking at another vendor. Larsen is dead.

2366. WTB Apache Transformer

Seems to me your local Ham store is the problem. The shop local to me has
all kinds of parts and you can buy the parts individually or as a package.
Larson is just trying to treat their dealers right by not cutting them out
of the loop. This is a very common practice and one I applauded. But it's
your right to be displeased and go to another antenna.

Huummm, you using the same headphones with all the different radios?
Being as you are toasting each one in the same way, would seem to
indicate a "load" problem. The load being your headphones. Maybe the
left side is showing the radio a wrong impedance for some reason. If you
use each radios different new headset, then this likely isn't the
problem. MK

Hi,
For sale a very nice condition Kenwood TS-940SAT. 100W ALL MODE
HF rig covering 160-10 meters. Built in antenna tuner. Has
notch filter, variable bandwidth tuning, slope tuning, cw pitch,
tone, etc. Built in 110 and 220 VAC power supply too.
High 5M serial number. Cosmetically/Electrically at least
a 9 out of 10. Non smoker. Moving overseas and decided to bring the
Collins gear, so no room for this HF rig. Dont want to
store it. Priced to move at $850 SHIPPED ! (Reduced)
You wont be disappointed.

Can demo on the air any evening, or come by for a look. Located
in Portland Oregon USA.

Thanks,
Joe K7JOE

All equipment listed comes with Manuals and other documentation...

This is a Kenwood TS-520...
Well taken care of...
Comes with a Shure Handheld Mic...
Powers up and receives not sure about transmit... Never tried...

The Ten-Tec CW Transceiver is in real good shape as well... Powers up
and receives haven't tried transmitting on this either...

Also available in the package is a Dentron Super Tuner...

All this is going to for $250.00 At this price it is a great deal even
if they need some work...
I bought them from a guy that told me everything was in "tip top shape"
and I have no reason to doubt him...

I need the $$$ so have to let them go...

Sold as is...However garanteed not DOA...

Pat!

I doubt you'll find a radio to solve this problem; it's built into the very design of mini headphone jacks. The springiness that holds the circuit in place is built into the jack, not the plug (unlike RCA jacks, RJ11s, coax, etc.) The jack is difficult, complicated and expensive to replace, usually requiring soldering.

Annoying enough on a Walkman; they make 'em to die on $300 shortwaves and MP3 players just the same.

The honest solution among manufacturers would be to acknowledge that headphone jacks are really consumable items, and design them to be unscrewed from their sockets, with replacements available at Radio Shack. This will happen with headphone jacks the day it happens with your portable's whip antenna.

Hello. I am thinking about replacing the 2M mobile I use
at home as a base station with a dual band mobile, so I
can cross band repeat to it from around the house and neighborhood.

One question I have is, with the dual band radios that have
built-in duplexers (now I've never even seen a dual band up
close before...), can you still hookup separate antennas for
VHF/UHF?

The way I understand it, the older rigs had two antenna jacks,
and you either hooked them up to separate antennas, or hooked those
two jacks up to a duplexer and then into a dual band antenna.

I am looking at older dual banders (that I can get cheaper),
and the FT-5100 caught my eye, I think I saw one for around
$200. Anyway I looked it up and saw it had a built in duplexer,
I wonder if that means it only has one antenna output?

The main reason I want to have two antenna outputs available
is because I don't have a dual band base station antenna
right now (but do have a 2M ringo ranger that works great),
and, I don't need (or want) the UHF side to go very far.
A block will be enough range most of the time. I could
probably hook it in to a dummy load for that matter, but
really I was just thinking of hooking to a mobile mag mount
whip located in the shack.

Long post, sorry. Thanks for any info on this and any comments
about the FT-5100 or other inexpensive dual band rigs that
have crossband repeat.

Ryan

I am trying to use a baycom modem with my PC to make a "base-station" APRS station. I have downloaded WinAPRS and the AGW Packet Engine. But cannot get the Baycom to do anything. I am running Win95.

Also, I have used the Baycom, cable, and radio on a very old, DOS based computer and it works. So I know the baycom and radio etc. work.

Any help is greatly appreciated. Thanks!! (e-mails preferred) -Chad

Buy the radio!!!! The FT-5100 is a excellent choice!!! I have mine and
still after many years of use it still puts out 43+ Watts on high
power. I really haven't had any problems with it whatso ever, but if
you want to use it as a cross-band remember to ID every 10 minutes
somehow!!!

You are correct in that there is only one antenna input. A good Dual
band/Tri-band antenna ought to do the trick. I picked up a brand new
one at a hamfest (Diamond) for only $20.00. You just have to look
around for one.

Yeah, the real problem is that you can't a part quickly through a dealer. Really, you shouldn't have to go direct to get a part. As for getting a part free after 5 years, well, I don't think anyone should expect that. Never the less, you have every right to be upset about the situation. Doesn't sound like you were treated too well by anyone. I'm not real happy to hear all this as I bought a Larson 2 meter antenna and it really is a good one. Hopefully they will have the parts situation straightened out soon.

We use a combination of a Plectron (2-tone decoding radio), 1-minute timer, and our normal base radio. When we get a call on our dispatch frequency, it trips the Plectron and retransmits all traffic onto our fireground channel for a period of 1 minute. The timer trips and resets the Plectron after that time.

I don't know why I never thought of it before, having seen probably 500 re-runs, but what sort of station is that in Radar's office on "MASH"? I have heard the suggestion that the transmitter on top of the switchboard is a Hallicrafters, but it doesn't look like any I can find described in the Dachis book.

What is the transmitter (gray, with twin meters)? What modes, bands, and RF power were used?

What is the receiver, and where is it? I have been watching twice a day this week, and can't locate it in any of the shots, though the TX PS seems to be on top of the bookcase to the left of the transmitter itself.

What sorts of antennas would have been used?

As for the crank-up field-phone setup that Radar often uses to contact his buddy "Sparky", I-COR, and the 8063rd MASH, is that strictly a landline circuit, or radio? Did they use low-VHF in those days for such short distance communications, either AM or FM?

Thanks,

de Will KD7BFX

P.S. there used to be a web site devoted to ham/military/HF radio/CW in the movies and on TV. Does it still exist?

Now here is how you can make Millions of $$$$s or =A3=A3=A3=A3=A3s or =
any currency in the world!!!=20

PRINT THIS PAGE NOW OR YOU WILL BE SORRY!!!!=20

Now you probably have been scanning different news groups to find out =
which one is the best, haven=91t you? I certainly did. But don=91t leave =
just yet. You=91ve probably seen newsgroups which start =90 I was =
looking through a newsgroup, just like you are now=91 =90I was sceptical =
at first=91 and =90I=91ve spent more than that on lottery tickets=91 I =
have seen many of them around. Asking for you to send $6 and you=91ll =
receive $15,000.=20
Well I=91m asking you to send $10 and receive well over $5,000,000 (5 =
million bucks).
I know it sounds crazy but here is what you have to do. Follow the =
instructions CAREFULLY.=20

1) Get 10 $1 bills and wrap them in separate pieces of paper each saying =
" Add me to your mailing list Please." Also your name and address.=20

2) Put these separate pieces of paper and put them into separate =
envelopes, sending each one to the names below. You should now have 10 =
envelopes with each $1 in and with your name inside.=20

3) Now you need to send this message to 200 newsgroups on the Internet. =
What you do is put your cursor at the top and highlight it all and =
select =90copy=91 then open up =90Word=91 or anything to write on and =
select =90paste=91. Now all you need to do is place your name and =
address on the number 10 spot and move everybody up a place, so 10 =
becomes 9, 9 becomes 8 ect, ect, now knock number 1 off the top, so 2 =
becomes 1.=20

4) Here are the names you need to send the money to.=20

1) R L Enterprises, P.O. Box, 808 Festus, MO 63028, USA=20

2) W.C. Daniels, 5910 Transit Rd. Depew, NY 14043, USA=20

3) Chris Adkins, 127 Cupsaw Dr., Ringwood N.J. 07456 USA=20

4)Simon Belgian, 1212 Viola Ave., Glendale CA, 91202 USA=20

5) Creative Consulting, 4302 N. 16th Ave., Phoenix, AZ 85015 USA=20

6) M L Enterprises 27-1300 King St. E. Box 135 Oshwa Ontario, Canada L =
1H-8J4=20

7) S. Soudakov Elmshurst House Bromsgrove School Worcs B61 7Du England=20

8) S. Kerr 21 Serpentine Rd Selly Park Birmingham B29 7HU=20

9) Ewan MacTaggart 10 Cordingley Close Churchdown Gloucester GL3 2EN =
England.=20

10) Sikhness Enterprises, 441 Avocet Ave. Davis CA 95616 USA

Now this is how it works.=20
As you post this, to 200 newsgroups and people read and think =90 Ah I =
will join up to this.=91 And let=91s say only 5 people reply (a very low =
number)=20
That is $5. Now those 5 people send out 200 news groups and follow the =
instructions as your name is at number 9. Lets say 5 people answer to =
each 200 news groups, then that=91s another $25. Now if they follow the =
instructions carefully, your name is at number 7 and you get $125. Now =
if those 125 people send out 200 news groups you receive $625. And again =
your name moves up to 6 and you receive $3,125. They now post the news =
groups and your name moves up to 5 and those people reply you get =
$15,625. Now this is where the newsgroups I was speaking about earlier =
finish, that=91s it. $6, 6 places. But now your name is now sent out at =
your name at number 4 and you receive $78,125. Your name has still got 3 =
more places to go yet. So now with your name at no 3 you get a whopping =
$390,625. Once again your name moves to 2 and you are going to receive =
$1,953,125 (1 million nine hundred and fifty thousand, one hundred and =
twenty five dollars!!!!!!) But wait, you=91ve got one more place to move =
up. Number 1. You will receive $9,765,625. Can you grasp how much that =
is Nine Million. Oh no, your name had drooped of the list, oh well just =
start again and get some more MILLIONS rolling in. These numbers have =
only been calculated, if only 5 people respond to each 200 newsgroups, =
just think of how many people are on the net!! It has been estimated =
that 20,000 to 50,000 join the Internet every month!

The reason why you must send off the money in the first place is that =
you create a legal service and this is not fraud. If you did NOT SEND =
THE MONEY then you would be committing FRAUD and can be put away, =
because you are using other people=91s name for your own good.=20

Please play fairly and send the money and you will receive tons, in the =
next few weeks!!=20

Any similiarity between what was used duirng the Korean war and what is
used as a prop for a TV show is more than likely to be a coinsidence.
What you see may well be a cardboard box with some knobs glued on.

Field telephones are wired. The crank is a generator which activates a
"drop" on the field switchboard or ring if hooked up directly to another
field phone.

Greetings, Heathkit buffs!
(you must be a green freak, since you're reading this posting)

I am parting out a Heathkit HW-2036A 2m FM transceiver. Before you ask, I'll state that this is not a restorable set. It was not working when I got it; it lit up and give a brief "pop" in the speaker when I turned it on, but that's all. I've used the speaker, knobs, and microphone to repair my own HW-2036A, but the rest of the radio is present. The front panel and S-meter face are in good shape. In fact, if it wasn't so much work, I would use them on my own rig. Both the top and bottom of the cabinet are dented and the paint is rough, so they're likely of little use (unless yours are missing altogether). The set is fairly clean inside and the circuitry has not been hacked up. The rear panel has been hacked (a previous owner installed a BNC jack for the antenna connection, and did it poorly). What parts do you need? Could I interest you in the whole thing, since I've gotten all that I need from it? Drop me a line.

FOR SALE:

ICOM IC-R8500 Communications Receiver, purchased BRAND NEW May 31, 2000 (I have a receipt) Original box, AC Power Supply, 12VDC Power Cord, and Manual. All in "exactly like new" condition!

Paid: $1458.00 (with tax), selling for: $1200.00

Also have optional Icom RS-8500 PC Control Software, with RS232 interface cable, and Icom SP-21 Speaker, that I can give you a good price on, if interested.

Thanks,
Bill Crocker

Frequency Coverage:
0.10000 - 823.99999 MHz
849.00001 - 868.99999 MHz
894.00001 - 1999.99999* MHz (*guaranteed: 0.1 - 1000 and 1240 - 1300 MHz)
Mode: SSB (USB,LSB); AM (Normal, Wide, Narrow); WFM; FM (Normal, Narrow); CW (Normal, Narrow*) (*optional filter required)
Number of memory channels: 1000 (plus 20 scan edges and 1 priority channel)

Quite true.

Not totally true.

I'm a little hazy on the date of fielding, but the integration of field phones and radio was around in the early '60s at least.

While the field phone is/was mostly used in hard wired circuits, the Army has had the equipment for 12 channel radio links for a long time now.

Radio links aren't usually used at less than a battalion HQ, so it would be unlikely for a MASH unit to have one, even if it were fielded during the Korean conflict.

For the detail obsessed, the equipment of the time would have been a CV-1548 telephone signal converter, TD-352 multiplexer, TD-202 multiplexer, and a GRC-50 or GRC-60 radio set. This was a whole van full of equipment and required a full time operator to keep it running.

The field phones are still used, but the van full of equipment is now a couple of boxes (still in a van, but you have to put it somewhere).

Yes, I'm using the rubber duck. I'll try a different antenna.

Musing a little... It's curious that this only happens with the battery
and an external 12V supply attached. I can understand why not with
battery, lower power, no external wire attached, etc. but, I would think
the same thing would happen with only the 12V supply attached and no
battery, but it doesn't. Of course, RF is a strange and wonderful thing...
The battery may be providing an additional path for RF, and the two
combined...

I have had it operating in the above setup before, without PLL desynch,
however:
a. It was quite a few months ago, because the battery went dead on me.
b. The new batteries are a larger, third party battery.

Thanks a lot for the response,

Randy - K5MW

Hello Mark. Name is Rich. I had the same problem with the C-5718. The problem occurred as the radio warmed up. It is a problem with an oscillator module. The repair shop in Michigan replaced the module and the radio has been in service since that time. I don't think this is a field repair.

Hi Gang,

I have for sale a Kenwood TS-120S HF Transceiver. It covers the 80, 40, 20, 15 and 10 meter bands. It works fine and would make a great mobile rig. The front panel is in good shape but the cabinet has scratches. It comes with the mobile mounting bracket, users manual and a copy of the shop manual. You can see a picture at: http://members.home.net/ke3ok/My_Photos/000417-003.jpg $250 firm plus shipping from 50315. Payment by US Postal money order only. No trades or COD's. Personal checks will be returned un-cashed and the transaction cancelled. Thanks and 73,

Al

KE3OK@aol.com

2427. Warning! -- SONY SUBSTANDARD SERVICE

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-08 00:00:00 UTC
From: An_American_Consumer@uywr.edu
Message-ID: <B2C1CCC1FBA32.twzvffbf@ettfucmpvw.com>
Source record: 75954

Anyone considering the purchase of a Sony peripheral for their computer
might want to give it some further thought. There clearly is not a
reciprocal relationship between what they sell and what they service.
-
I purchased a CD-RW drive back in April that just recently went bad
(won't read). When I called Sony service, I was told that I could not
get a replacement and that I had to ship it across the country to be
"repaired" (and we all know what that means...) - with a three (3) week
turnaround. Assuming that they keep their 3-week commitment, with
shipping both ways, I'd be without the use of the unit for at least
five weeks!!!
-
I hardly think that's reasonable or fair.
-
Compare this to HP, who under the same circumstances would simply ship
you out a replacement unit and issue a call-tag for the old one.
-
Sony is a behemoth in the marketplace and as such, they have an
obligation to scale their service facilities to meet demand. To not do
so is an indication of their lack of commitment to customer satisfaction
and an unwillingness to stand behind their products.
-
Buyer be ware!

>> the Korean conflict.
>>

Well, no. There would be radio links at "higher" HQs. There just wouldn't likely be radio links at the unit level, i.e. at the 4077th MASH.

They would have tactical radios, but they wouldn't be connected to the phone system.

A typical scenario would be: A person picks up a field phone at a unit and cranks it. The unit switchboard (a small one) would answer the ring and patch the call to the Battalion switchboard (a bigger one). The link from the unit to Battalion is most likely wire. The Battalion operator would patch the call to a higher HQ, such as Corp or Army. This link could be either wire or radio depending on the situation. At this point, the call would go by radio state side. Once state side, the call would get patched into the commercial phone system and dialed by the state side operator.

That's for an "official" call from the field phone to a state side commercial phone.

Personal calls via the MARS ham system are different.

You would go to the MARS shack and you would be directly talking into a radio with the MARS operator handling the controls. Small units usually didn't have a MARS station unless there just happened to be some motivated hams in the unit and some equipment available to them. In larger, battalion and above, units there would likely be an officially supported MARS station.

Keep in mind MASH is a TV show. If it were reality, they would have a First Sargent doing most of the stuff Radar and the CO were doing. You ever see mention of a First Sargent on MASH?

Jim Pennino

2429. ICOM IC-2340H

Source record: 75956

Hello everyone,

I have a question on this model Icom. I have been out of the hobby for
2-3 yrs now so I would like to sell this dual band unit. It is in very good
condition
and used for only the first 6 months or so of buying it. It has sat in its
original
box untouched until some 6 months ago when I made sure it still worked.
This thing really is in almost perfect condtion.
Someone offered me $75 for it...I think this might be too low, is it?
What would be a fair price for this radio?
Here is a link to the specs on the radio

http://www.icomamerica.com/archive/IC-2340H.html

Thanks in advance for any help!

James

Hi all,

I'm trying to obtain Service and Owners manuals for the old Trio
2200G and the slightly later Trio 2300 2m radios.

If anyone has any manuals they would like to sell or even photocopy
for me I'd be very grateful. All costs met of course.

Alternatively. just the alignment instructions for the sets would be
very useful.

If you can help, please E-mail me at:

TF.Electronics@virgin.net

Many thanks,
Nige,
Oxford, England

What you'd probably end up with would be one more NG for the cross posting.
With 4 established groups, people would just add the new one to the list.

What happens is that people want to hit any crowd that might be interested
in their equipment. Or any group that might have the equipment in which they
are interested.

I'm answering this post on "boatanchors", I most likely will not even see
any remarks on any of the other newsgroups to which you've posted. So,
cross posting does have some disadvantages.

Indeed it would be preferable if a more lasting design were introduced. But I was suggesting a mechanism that would preserve backward compatibility.

1/8" jacks were OK for their time...they were on small Sony portable radios at least 35 years ago for occasional use with those ridiculous little thimble-sized one-ear earphones people used back then.

But then they had to come up with a compatible stereo version of the jack/plug, which further tightened the angles, materials and contact surface area. Remember, the design doesn't just have to route the signal, it also has to cut off the speakers.

Nowadays people really stress those jacks with sports use, taping, etc. They're subject to corrosion and metal fatigue.

One way or another, the design needs to be improved, especially on units like the $750 Personal Jukebox.

Hi,

I have what you want (I think). It is probably a 100 watt, 600 ohm resistor. The length is 18 inches and the diameter is one inch. There is a hole going down the center that is approx. 1/2 inch in diameter. The ends looks to be tinned for about 1/2 inch. The manufactor's stamp on the resistor says Globar Type CX, 600 ohms. In reality, it measurs 580 ohms.

Let me know if this is good for you

I've noticed this problem with many of my Walkman portable / pocket AM/FM radios. Part of the problem seems to stem from poor quality headphone input jacks. They tend to weaken and loosen to the point where the electrical contact can be lost inside the jack itself.

The tips below are pretty straight forward, and are sure-fire relief from this problem.

Thanks
gbowne

With the single output rigs, you must put in an outboard duplexer to
separate the 2 and 440, then you can put whatever you want in either line.
Of course there is some loss through the PL-259/SO-239 junctions. With the
FT8000 or 8100, there is a pin in the pc board right near the output and
removing this and installing another pigtail for the 440 side, disengages
the internal duplexer. I don't know if you can do this to the 5100

For Sale a Yaesu VX-5R in perfect condition. This radio was bought in Oct. 99 and is a late version, serial number starts with 9I. The radio is in like new condition with very little use. In comes complete with the original box, manual and all of the original acc. I t also includes a Yaesu black soft case CSC73, a 2X AA battery case FBA23, and a microphone/packet adaptor CT-44. I will sell all for $250.00 plus shipping to lower 48. I will ship on receipt of a Postal MO or if a check I will wait for the check to clear. I am selling this handy because I have 3 talkies and I am using my Kenwood D7 with the built in TNC the most.
I am in the Phoenix AZ area.

Message-ID: <3966B6C0.79E7145D@bellatlantic.net>
Source record: 76036

Thanks for the info!

So you use only 1 LO - neat! And I misspoke -
the two XTALs I use are 22 and 24 mhz.

I didn't even know the radio had CTCSS
capability! I'll see what I can find on that -
if I have anything, I'll send it along. I have the
book for the 2510 - I may also have the 2600
book. I reduced the power via the pots inside.
I didn't think of killing power to the final. I'm
surprised that works! But it's great - gives me
another thing to experiment with.

I also have the 2510, and the trace to pins
34&35 was already cut, and there is a 10k
pull up resistor (but none added the resistor
is original in the radio). But that one
goes to 29.699 too. I read somewhere
on the web that some 2510's go to 29.999
when the trace is cut - others go only to
29.699

2477. Help with Knwd TS770

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-08 00:00:00 UTC
From: Marco Eggert <m.eggert@arcormail.de>
Message-ID: <3966F472.F8C9CF63@arcormail.de>
Source record: 76038

Hello!

the good news: I bought a used TS770E for less then 250$
the bad news: ....it has some minor problems I hope I can fix.

1) The freq. display is only partitially lit up, or shows nothing. after an hour or so of warm up, I turn power off and back on...there ya go: display works..

2) The FM center display seems to be not properly adjusted. If I center in, I about 2khz off frequency.

3) The ALC instrument does not work on 144/145 Mhz. However, it does work on 430-440 Mhz...strange, huh?

4) When transmitting in SSB, the AGC is too slow, so I miss the first words when qsoing with a weak station

Any suggestions, tips or hints are welcome...thank you very much for your help....!

: Reply to: relaxn at frontiernet dot net, remove "deletethis".

The problem, as others have noted, is generally the jack....not so much
that it wears out, but that it's terminals get detached from the circuit
board.
In most cases, the jack is only held in place by the soldered connections
themselves(and sometimes by a plastic pin or 2(which do nothing to solve
the real cause of the problem).
Solder is intended to make a electrical connection, not a mecanical one.
(standard solder is WAY too soft to do this well).
Things to do:

1.don't use LONG headphone plugs....they act like a lever, and pull the
jack off the board.(if you are buying a new pair...DON'T get one with a
1/4" plug...the 1/8 adapter is trouble for the same reason.
If you have to use a adapter, use a right-angle one(trust me, it DOES
help).

2. try not to yank the headphone cord....if it is too short, then use
a extentsion cable to lengthen it.

3.if possible, use a headphone with a right-angle plug(or get a right-angle adapter).

4.get a inexpensive soldering iron, a small pack of solder, and a set of small screwdrivers, and take the time to learn to resolder the jack terminals back onto the circuit board...it's NOT that difficult!
A hint:if possible, a bit of contact cement or silicone sealant(urethane cement should work too) BUT NOT hot-melt glue...it pulls off the board too easily, and thus becomes useless!), put on the circuit board under the jack(keep it away from the contacts, of course!) will help anchor the jack in place, taking some of the stress off the terminals).
Don't use super glues either...too thin, and the fumes can oxidise the jack contacts.

Btw, some jacks ARE better than others..some of the Sony ones seem better than most. but they STILL fail quickly at times.

I've resoldered MANY jacks over the years, with excellent results in almost EVERY case.

HI All,

I have for sale a nice Yaesu FT-900AT HF radio. Looks and works 100%!!
This radio has the built in auto tuner and is very fast!!
I have the remote mounting kit for it also if you want to remote the head
for mobile application. (This has not been used).
Reason for selling is I have other interests @ this time.

$700 plus shipping.

Thanks
Gary N7GB

The critical component of a UX-14 is a custom-programmed microcontroller which "pretends" to be an EX-309 to the radio and speaks CI-V on its serial line.
If you HAD a UX-14, it might be possible to read out the program, then if the controller line hasn't been discontinued and there's a field programmable part, you could clone it.
If not, you would have to develop and debug a new implementation for some current part like a PIC-8 or Basic Stamp. If you had to pay someone to do it, you could have your new UX-14 for $10,000!

The EX-309 is much simpler, it's basically a couple of buffer and latch chips for an 8-bit parallel I/O handled by the main radio processor. Unfortunately nobody supports the CI-IV software interface - though I did at one time manage to find source for a program to talk to it somewhere on the web, but that was the only documentation I ever found.

It would be better when manufacturers would acknowledge that the design of
the jack plug was not a really good idea, and design a replacement plug
that allows headphone connection without wacky contact.

Unfortunately it is not simple to design better connectors while at
the same time miniturizing them.
And of course manufacturers see very well that a worn-out connector is one
of the first reasons to replace an aging piece of equipment, which they
need to keep their business running.

Source record: 75852

I have a Millen model 92200 transmatch for sale. It is in nearly perfect condition. It has three SO-239 on the back, one for transceiver input, one for antenna output "10 - 500 ohm", and one for "Low Impedance Pickup Modulation Monitor". I am asking $150.00 for it. The imperfection is that one of the knob pointers is broken. This is a thin piece of flexible bakelite or other PC board type of material which could easily be replaced. E-mail to n6kb@juno.com

Get a better newsreader. In Both Netscape News and Newswatcher once a message is read in one group, it is marked as read in the other groups it is cross-posted to (and doesn't appear, if you have your preferenes set that way).

For improved contact while preserving (mechanical) backward compatability,
I once used a thin cable that passes through the hole in the connector,
soldered it internally to the PCB (on a soundcard), then used a set of
european (DIN) speaker connectors to connect the speakers. This solved
an ongoing problem with the ground connection (sound suddenly
"disappearing", all that is left is a differential (R-L) signal at 180 deg
phase.

Have an old KW rig that is in desperate need of repairs. I have manual; but can't seem to find anyone around that will work on it.

Got some cheap coax and wired up an antenna and ended up loading into an open (coax didn't take the solder). As well, the VFO knob needs to be refitted with the string to tune.

The rig was my first rig purchased by my parents for me back some time ago.

2496. INVITATION TO 3 ANTENNA REFLECTORS (LISTS)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-09 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20000709091642.02311.00000253@ng-cb1.aol.com>
Source record: 75900

QST--

You are invited to join one or all of the following lists on e-groups(formerly onelist). All these reflectors are e-mail based, friendly, objective, and moderated ,so that no spam, porn, off-topic, or personal-offensive posts are sent out. You will receive no off-list e-mails by subscribing: again; no spam.

These lists (with average recent subscriber sizes) are:

ANTENNAS@EGROUPS.COM 180 members
CROSSFIELDANTENNA@EGROUPS.COM 67 members
FRACTALANTENNA@EGROUPS.COM 265 members

Please review the descriptions at:

http://www.egroups.com

Please note the CFA list specifically deals with this antenna in an objectively critical fashion and no posts will be allowed that make grandiose claims without supporting data presented. To date, no data has been presented which requires the extraordinary claims made by some pundits: there is no evidence for better performance than any other small vertical antenna (and that performance is poor).

To subscribe to any list, either go through the process at egroups, or to skip the process (and some say 'annoying questions') just do:

---------- -subscribe@egroups.com

where the ---------- is the name of a given list (such as 'fractalantenna')

If you have a specific question on this post, please e-mail me off-NG at chipn1ir@aol.com.

73,
Chip N1IR

I have not used the separation kit, but I have used the radio for about a year and couldn't be happier. It works particularly well for the digital modes and has all of the necessary input/output jacks for digital. The auto-tuner I have found to be very efficient and will tune up almost anything. I run a 10-meter dipole on 10,15,17,40,80 meters. Go figure. Runs cool and has a nice quiet fan too. I think you will enjoy the rig.

The only thing I see that does this is to set the reader to "delete Messages
when read" and I don't want to delete them, just not show them.

I have it set not to show read messages, but the ones in other newsgroups
still show.

Have forsale a Mosley Dipole Conversion Kit model TA-40-KR. this kit converts the TA-33 and TA-36 to operate on 40 meters.this kit is in great shape with all parts , screws , and manual.you may have to replace some of the guy ropes since the kit was installed and rope was used and cut it is to hard to work with when you add the kit to another beam since rope may be to short for your application. I will put all pieces of rope with kit. asking $120 shipped in the u.s. via u.p.s. John w3ayt@arrl.net

2514. F.S. Icom 765 Hf. xcvr

I have forsale a Icom IC-765 hf ssb tranceiver. this radio has built in power supply, built in antenna tuner and 250hz, 500hz, 2.3 kc, and 6 kc filters .excellent receiver that covers from 1.5 mhz - 30 mhz transmit and receive. comes with modified SM-6 microphone, power cord and operating manual and service manual and original shipping carton. asking $1125 shipped u.p.s. in u.s. John w3ayt@arrl.net

modified means has replacement electret element in SM-6.radio has some minor scratches but over all is a good looking radio and operates perfectly.I used it for 24 hrs on fieldday on 75/40 meter ssb/cw without a single problem.

Randy,
Took me a while to find this, but check this link on 202 mods. There is a comment in there about using external power while the battery is installed. I think this will explain your problem.

Message-ID: <43thmso6nbj6lim8saao2k4um439qava4c@4ax.com>
Source record: 75931

I'm getting ready to replace one of the final amp rf modules in my Kenwood TM-741A. The actual job doesn't look too daunting, but I am concerned about static damage during the process. I can't afford the kind of equipment we used in aerospace manufacturing, so need advice as to the suitability of what I have. I know I should have a grounded soldering iron/station. I have an older Weller TC202 solder station with the TC201 pencil iron. It is also known as the WTCP series. It doesn't claim to be a grounded system, but I measured the tip to line ground (3rd pin) to be 1.4 ohms. Even expensive stations today only claim to be less than 2 ohms. I wonder if this one is safe to use on sensitive components? I plan to use a grounded work mat and wrist ground strap. Is that enough?

Dick Hughes

Why not get a simple "extension cable" from Radio Shack or wherever that has a 1/8" stereo plug at one end and the corresponding jack at the other end. Plug it into the radio and leave it there - do not stress the radio connectors by removing and replacing it, ad infinitum. Plug your headphones into the cable jack and let that take all the abuse from repeated operation. When the connector starts wearing out, just replace it.

Now, I know that this does nothing to alleviate the problems of using the radio jack to turn the radio speaker on and off. But, if headphone operation only is tolerable, this ploy would at least minimize the wear on the delicate radio connector.

2555. Help with locating information (and advice) for building a remote

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-10 00:00:00 UTC
From: ghopper@eskimo.com
Message-ID: <ghopper-1007001558270001@07-138.009.popsite.net>
Source record: 75799
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I am starting to look for projects for the winter months so I can get my parts orders together. One of the things I am interested in putting together is a multi output remote controlled switch. The most common design I recall seeing is via DTMF control. A company down in oregon sells an 8 or 16 output switch that uses a 4 digit DTMF security code and a 4 digit code to turn on and off the outputs (or in some cases, just cycle the output like a momentary switch). I don't remember their name off the top of my head, but the point is that I would like to design and build something rather than just buying it.

I recall an older QST article on the subject, and I believe that radio electronics had an article too. I haven't located either yet, but I'm looking for pointers to ANY information on designs (or just ideas) for design of something like this.

Any help is appreciated!

I have an old Trio 2200G and the manual that I have is of a Drake TR-22C. This describes the unit pretty well. It includes Operation, Theory of Operation and Maintenance. It does include schematics and board layouts with part ID. Let me know if I can help.

2576. Need help setting up repeater

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-10 00:00:00 UTC
From: ak6tdesert@san.rr.com
Message-ID: <MPG.13d3902e7ed06079989688@news-server>
Source record: 75863

I would like to set up an open repeater on 6 meters or 1.2 ghz, these are the only bands in San Diego that aren't completely full. I've searched for a few nights now on the web for information on how to set up a repeater site. I can't find good info, does anyone have any good sites they know of? I have a good location to set up a repeater at my house, but I'd like to know how to get a mountain-top location. How does one do this and what do they charge? I found a site about a 1.2 ghz setup that used Kenwood 541's, bandpass filters, and a repeater controller. This seems like an easy setup. I could probably use some monobanders for a 6M setup as well. I'm thinking a 6M repeater may be good repeater to put up since with all the Yaesu VX-5R's being sold, there may be some FM activity finally on this band.

Any help is greatly appreciated.

73,
Travis - AK6T

Source record: 75864
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,triangle.radio

Yaesu FRG-100 receiver with KP-100 keypad and PA-11B AC adapter. Receiver is like new condition with no defects at
all. Not even the slightest scratch on this receiver. The original box is also in excellent condition. The French
made KP-100 keypad is also in like new condition and allows direct frequency entry into the receiver. The manual is
also included. It receives from 50 Khz - 30 Mhz. USB, LSB, CW, AM, Clock, 52 memories. The FRG-100 has the CAT
System if you want to control the radio via your PC's serial port (cable and ScanCat Gold for Windows software
included).

Used very little by a non-smoker. Bough a transceiver with a general coverage receiver, so now this radio
isn't really needed.

$465.00 shipped to the 48 states.

Money Order or Cashier Check Only

My FRG-100 looks just like this one:

Greetings,

I just finished building one last night. Works great!

Here is the URL for the site that will give you details:

http://www.plicht.de/ekki/civ/

Some where in those pages is link to a cool company that makes
PCB for these type of projects. The sell this PCB for $3.50.

All toll, the project cost about $15.00.

I have been thinking about building these for resell. What
do you think would be a fair price for these units? Would
there be an interest buying kits? One stop shopping type
of thing.

Thanks for any input.

It was made by Maxon. It and the HTX-202 were built by Maxon
under contract with Tandy. There really isn't much in the way
of mods for either of these radios. They're actually notorious
for their being unmodifiable. Just good radios for what they
were made for and nothing more.

2596. Newbie questions re: Yaesu FT-207R

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-10 00:00:00 UTC
From: Chuck Welborne <welborne@purdue.edu>
Message-ID: <835kms4frdbm91ui68i4431sov2pvgufoc@4ax.com>
Source record: 75883

I just picked up my first portable, a Yaesu FT-207R 2M unit. Seems to work well, and I think I found some manuals for it on the web.

Has anyone owned one of these? Could you help me figure it out?

It does not appear to have CTCSS capability, but it does have a numeric keypad. I think there might be room to add a tone board if I can figure out what to wire it to.

Also, it has a 9-socket flat plug inside, anyone know what it might be for? Or is it not a standard item, somone else added it?

Almost last, it has a jack on the bottom where the battery terminals are. I'm assuming that I can plug a DC adapter into it. It's wired into the same circuit as the btty terminals, and has a diode on it (to stop current from the charger reaching the jack?).

Finally, it has an external mic jack, but the jack takes SIX pins. And the 'Ear' jack is separate. Any idea if a speaker-mic might be available?

Thanks for helping a newbie, I'm looking forward to learning about this radio...

Source record: 75884

Chuck, this is a fairly old unit. I had one when they first came out
and I think it was introduced around 1980. It was one of the first
synthesized 2 meter digital rigs on the market. As my memory serves me
(ironically the rig was known as a "Memorizer"), it runs around 10 watts
out and only has 1 or 2 memory channels.

If you decide to wire a ctcss encoder into it, that would probably be
better installed inside the rig tapping into the deviation pot.

Not sure what the 9 pin socket is for.

I am not familiar with the plug you mentioned that hooks into the
battery contacts. This may have been added later on as some sort of
battery backup for the memory. As I recall, the power was brought into
the rig via a 2 pin microphone type connector.

The six pin auxillary connector on the back is an auxillary PTT, audio
in/out. This is commonly used in packet and digital applications.

I think I may have gotten my Yaesu models mixed up. The one I was
thinking of was the FT227R and not the FT207 that you mentioned.
Sorry for the mixup.

I owned an FR-208R.

If I recall, the FT-207R used a red LED frequency display and
battery life was short due to the high current drain.

Yaesu made some of the Wilson portables and you might try a remote
mike for the Wilson Mark IV if you cannot find the Yaesu version.

>2 to 4%? Give me a break!
>Bob

I don't find this hard to believe. This figure most likely came from someone close to the business. When laymen learn of the retail mark up on an item, they are usually shocked that the price is raised that much. However other things must be taken into consideration. When a retailer expresses "profit margin", it usually means free and clear profit. That is, after rent, utilities, payroll, insurance and so on. The cost of operating a store with 1,500 square feet of retail space and 3 or 4 employees can be extraordinarily high. and probably requires at least $3,000 to 4,000 of profit per week, before overhead expenses to stay alive. Rent can go between $1,500 to 3,000 per month on a store this size. Utilities can run as high as $200 - 400 per month. Figure in what wages go for in your area.

All of the above is the reason why the HRO's and the AES's are successful. They have the buying power of several stores combined so they make more profit per sale. They also lower the cost of some of incidentals of doing business. They slowly buy out the Mom and Pops radio stores and either absorb their stock in an already existing store, or put one in the area. Usually though, it's just absorbed. These stores are doing a growing business over the net, thus lowering their overhead even more and increasing the profit margin. The longer they do this, the harder it is for an enterprising ham to open a store of his own because he can never compete with their prices and internet presence. In ten years you will be hard pressed to walk into a store and buy a radio, unless it's an HRO or AES store.

Can you imagine how many drives they'd be giving away, if they sent
replacement drives prior to receiving the bad one?

Your best bet is to buy local and make sure that they have a replacement
policy. Some stores do, but most don't. For those that do, the limit is
usually about the same as the warranty. Out of warranty and you are on your
own.

Darned if I know. I refuse to even look at ebay due to their practices even if some one has something I want. Too many cases of people running up prices and other illegal practices.

I even have them filtered out on the newsgroups.

I think people do go to the auctions because they are allowed to set a minimum price and then hope (or have) some one will run it up. So they may be a good place to sell, but I'd be leery of buying there.

Very nice, trim, high-gain AS high-grade aluminum J-pole. Bought new and used less than one year, then stored inside. Excellent condition. Currently has extra last radiator section added for 11-meter operation. Antenna had slightly more gain than best 11-meter omni antennas when tuned on 11 meters. Excellent where wind resistance/obtrusiveness is a concern. Asking $105.00 shipped CONUS from 91406 (Van Nuys, CA) or will negotiate if local pickup. Pls. respond via email: toomuchstuff@pobox.com THX, Jon

I don't know about you all, but I won't buy anything on e-bay. Secret reserves, proxy bids and last minute snipers along with up to 7 days wait to see what you have to pay to deal!!!! Who the hell needs it.
Have bought lots of stuff from the NGs and am willing to negotiate and pay a fair price for what I want. What really irks me are the listings in these NGs referencing items people have just placed on e-bay. Seems to me if you list something on e-bay, leave it there, or deal directly with the NG folks and get a fair price without paying the middleman. As a bonus there will be less useless clutter on the NGs.

Thats just my opinion, I could be wrong.

2620. Re: 6 Meter Mod for AL-80A ???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-11 00:00:00 UTC
From: John / NS1Z <ns1z@agate.net>
Message-ID: <3c6nms87hd8isqg6nkrabj2pu5dbh7p1a1@4ax.com>
Source record: 75758

I'm that guy and I sent him email with the details. For others who might be interested: the KB9JJA Heathkit website has my construction notes listed under SB-1000 6 meter modification. As many already know, the AL-80A was "kitted" by Heath and called a SB-1000.

I have been thinking of putting the construction notes, with pictures, of my SB-220/221 conversions on a web page. Anyone interested in this type of information?

On Tue, 11 Jul 2000 12:10:57 GMT, Gary Danaher <gdanaher@home.com> wrote:

Roger;

Beg to differ, but rec.radio.SWAP is for items FS (For Sale)
or Trade.

rec.radio.equipment is supposed to be for discussion of gear and
problem solving, etc.

Check the descriptions posted on 15th of each month by Jeff.
This is posted to rec.radio.swap in response to your reply to
Murray.

I bought an FT-900 from a friend of mine around Christmas time. Prior to that I was using a TS-430. You'll be very pleased at the difference. The only thing I did to the 900 was add the INRAD 2.1kHz filter. Keeps the QRM down a bit.

2635. Radio CPU code hacking (TM-V7A & others)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-11 00:00:00 UTC
From: cj <cj_johansson@hp.com>
Message-ID: <396BA8BF.6BBA@hp.com>
Source record: 75773
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I haven't seen any threads on this so I figured it'd be interesting to start one...

In the early days of computer controlled devices, if we wanted to make the thing do various things that were never intended by the manufacturer,
we'd get into the thing, dump the ROM, disassemble it and figure out how the thing was programmed. Then, figure out how to reprogram it so it would do all sorts of whizzy things we wanted.

Now, it seems to me that doing this with these fancy new computer controlled marvels would be a great endeavour, but I've never heard of anyone doing this. Why? Are these things just too complex? Are the CPUs too proprietary so you can't get any info on the instruction set? Are people just not into "hacking" any more? Have HAMs just gotten to the point where the only mods they feel like doing consist of cutting a wire or removing a resistor?

I don't know. In my own case it's mainly the fact that I hardly have time any more to talk on the radio, let alone figure out mods and hack code. But, it's sure be fun to really get into the guts of these things and really figure out how they work.

Has anyone ever heard of anyone doing this? Does anyone have any inside contacts at Kenwood, Icom, etc. who might know about the design and programming (doubtful since these NG's seem to be mainly North America and Europe based, but there could be someone out there)...

An old hacker gettin' the bug again...

Well, it would be No Great Feat to crank out a perl or REXX progam
to do such a posting -- on a ng-by-ng basis.

I think I've even seen such postings where the software takes
the last full 'word' of the ng and 'works' it into the Subject:
As in:
Subject: All you need to know about equipment
for rec.radio.amateur.equipment ^^^^^^^^^
and so forth, und so weiter.

In truth, they most common processor units used today are called PICs

PICs have the capability of having a flag burned in them that makes them
unreadable, hence they cannot be dumped to hack them.

Many uP mounted ROM arrays (eg. some in the MicroChip PIC series)
are un-dump-able now-a-days.

Another option is intercepting the control strings as they go by, and use another PIC to change the values 'on the fly'. This is how I use my /\/\ mtx-900 on 900 megs...

Message-ID: <IERa5.1601$LB3.9943@news1.atlantic.net>
Source record: 75782
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=380314974

Yaesu FT301D for auction. This HF unit (which includes 11 meters which was installed by previous owner) was returned today from Yaesu USA. I sent it off to have it tuned up and aligned so I could put it up for auction. Radio is within all Factory Specs. I just hooked it up and connected to a dipole with a tuner and made 3 contacts with 3 attempts on 20 meters. Radio is putting out a little over 200 watts on 20 meters USB and 50 on AM. Although this radio is aged a bit, I always thought it had one of the better front end receivers of all the Yaesu's. It's reception is even a bit better than on my new FT840.

Source record: 75784
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc

>Drake R7

The R-7 is worth anywhere up to $850 if it's in pristine shape, with the noise blanker, 6 kHz filter, and 1.8 kHz filters installed. Add $50.00 if you have the box, service manual, and original instruction manual. Without the noise blanker, it's worth about $75 less. Lack of the 6 kHz filter subtracts about $60. Lack of the 1.8 kHz filter subtracts about $40.

These are highly desirable among shortwave broadcast listeners and they are considered one of the best receivers around for shortwave DX'ing.

>Drake TR7

The TR-7/PS-7 with a full complement of filters in pristine shape with the noise blanker is worth about $700 maximum. Add $50 for original packaging, instruction manual, and $25 for the service manual. Subtract about $50 if the TR-7 doesn't put out at least 60 watts on 10 meters. There's a couple of switching diodes on the front of the high pass filter assembly that go bad quite often and reduce the power output on 10, 15, and sometimes 20. Although they're easy and cheap to replace, the value of the TR-7 suffers if they're bad. A bare-bones TR-7/PS-7 with only the SSB and CW filters goes for about $500.

It would be even better if you told what RCKARA stood for, which country you were it, etc. Even under the Club Informatin there is no clue as to what planet the 'rckara' is on.

other than that, pretty good site -- nice html. I like the buttons on the side -- that is a very good way to navigate!

now, where are you?

cheers

Congratulations!! Nice going, Scott.

I remember "dit-dit-dash dash learning" by using time that is otherwise
lost. In my case, I would practice/learn while driving, by attempting
to "send" the road signs in my mind before passing them.

Hope you'll find Morse as surprisingly easy as I did.

Does anyone recall the radio used on the Sky King TV show?

I remember the show aired in the late '50, early '60's.
It was a Western starring Kirby Grant, a flying cowboy who fought the
bad guys by flying a plane instead of riding a horse.

The radio was on a desk in this living room and was used to
communicate with various pilots and the law.

The show also featured Sky's nephew, who was pretty dense,
and his niece, Penny, who was quite a dish.

I have for sale my Yaesu FT-2500M two metre FM transceiver. It is in perfect condition. This rig is built to military specifications and is extremely rugged, well built and the controls are easy to use. Perfect for use in 4WD and pick-up trucks. Includes CTSS, DTMF, keypad mic, mobile mount, power cord and manual.

I am selling this radio only because I have lost interest in 2M FM. My price is USD $150 plus shipping. Please email me direct if interested.

Motorola UHF GP350 HT
16 Channels on 464 MHz now. 430-470MHz
It comes with battery,ant,desk charger. They all were new in the
middle of 98.
Looks and works very Nice! They all have a small number on
lower bottom of HT.
I have about 10 of these.
250.00 each.
And they will not be dead on arrival or money back.

Some guy has been selling old Heathkit parts on eBay that are left over from these type of conversions on SB200-220 amps. Check for these parts sales and track him down tghat way. I would imagine he could tell you what you want to know. The AL80A isn't all that different.

2677. VX-5R Antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-11 00:00:00 UTC
From: Jeff <jswanson@bigfoot.com>
Message-ID: <QMFa5.725$4U4.50168@paloalto-snr1.gtei.net>
Source record: 75838

I bought a new antenna and a SMA/BNC adapter for my VX-5R, but am worried the antenna and adapter will cause additional stress to the SMA connector/mount on the radio. Can the factory SMA antenna connector on the VX-5R be removed and replaced with a BNC type, and if so, how hard is it to replace? Also, if it's possible, where can I get the new BNC mount? Thanks in advance...

I am trying to home-brew a linear amplifier. I sent Amidon Assoc. an E-Mail and tried calling, three times, for a recommendation for what size and core material to wind a power transformer out of. This is not something exotic. The local electronic store has a box of 12V 5A toroidal transformers surplus and Baltimore Transformer has been making this type of transformer since at least the late 1970's. They have yet to have been able to answer this question, " What do I need to order for a 350W 50/60Hz power transformer?"

Yes, I have been to their web site. They list sizes, but not core material to order. We are only talking about $20, so it is not a big order, but it is not like I will need to spend weeks or months savings up for it. For them it was basically a guaranteed order, I just needed to know what to order. If they take plastic, I would probably order right there and then.

In my opinion, find an old microwave oven and rewind the power transformer. As for rf cores, buy from their competitors, at least they will answer E-mails.

2682. Kenwood TS-450S memory backup battery?

Source record: 75845

FOR SALE: ICOM IC-745 HF transceiver 160-10m; includes gen coverage
(0.1-29.7 MHz) receiver. Dual VFO, 16 memory, 100 + watts out per band.
9 of 10 cosmetically, 10 of 10 operationally. Requires external
12 vdc power supply (as do most rigs nowadays). Used extensively in past
2 years, mainly on ssb and psk-31 modes.

For more info, e-mail and I'll get right back to you.

I don't need 2 rigs, so I MUST sell this to help offset cost of the new
rig I just
bought. $450 OBO (REASONABLE, pse), and I will pay shipping lower 48.

Thanks and 73,
Bob

I do do eBay occasionally, and have got some terrific deals, but I agree with what you say. Ebay isn't even really an auction. The length of bidding period is ridiculous. At a real auction, all bidders are present from start to finish, unlike eBay where the snipers pop up at 4:30 am at the last minute. The reserves are nuts too. Start an auction at the mimimum you are willing to accept for it, and don't waste everyone's time by starting it at $10.00 when you set the reserve at $500.00! Please! However, to be fair, eBay's cut for being the "middleman" is pretty small, about two bucks to list, plus a small percentage of the closing price.

eBay is just what its users make of it.

I've gotten some good stuff there. I've also seen some things go for ridiculous prices, but that happens at real auctions too. Try attending an estate auction, for instance.

As far as the long bidding periods go, this isn't as weird as you think. Stamp collectors, for instance, have been conducting auctions by mail for a hundred years or so. Sometimes the bidding period for those is SIX WEEKS. And the bidding is completely blind. You put in the maximum amount you are willing to pay, and hope it is higher than anyone else. You trust the auctioneer to reduce your bid to the lowest amount needed to overbid the runner up. The eBay system is very similar.

I agree that "reserve" prices don't make sense in most cases. Items should be offered with a starting bid that meets the seller's minimum requirement. I don't know about the current rules, but originally the seller was allowed to make one bid on his own item. That would be another way to avoid keeping the thing from going "too cheap", and seems more reasonable to me than the secret reserve price business.

Say what you like about eBay, but there is one very good reason for its success. Suppose you were looking for an "Ediphone" or an "Instructograph". You could haunt antique dealers and surplus places for the rest of your life and never even see one. The sheer mass of eBay means that one will probably appear there within a few days. Like it or not, that one element is what has guaranteed the continued growth and success of eBay.

Lets try this again. I think I hit the send button before finishing. I ordered a power supply from some company and it was shipped UPS (yuck). Two weeks later my XYL ask me what that package was in the back seat of the car (in the garage). I said I don't know, opened it and found the power supply. It appears that one day the garage door was open and the UPS man/woman, whatever must have opened the back door of the car while it was in the garage and put it in there. I don't know about you folks but seems like that would be a good way to get shot.

I know a friend who is about to put his absolutely mint IC-756 up for sale (he just got the 756Pro). I have had extensive experience with this rig myself, and it is an awesome radio, both for CW and (if he ever needs it SSB). It has a built in memory keyer, and the display is great for figuring out pileups. Anyway, I think he is going to be asking about 1300 or so for it, with a service manual, and both the 500Hz and 350Hz filters installed as well. It is truly in flawless condition. I sold mine for $1200 without the service manual or any optional filters (I also got a Pro, I wouldn't have parted with the 756 for anything else), so I think his price is pretty fair. Just a thought...If you might be interested, I will pass on his email address...Otherwise, I also would expect that both the Kenwood and the TS-570 would be FB rigs as well. Good luck, and congrats to the new op!

Retuning the front end will improve things a-lot. { Be sure and read the
manual regarding tuning procedures especially if it is a dual front end
radio, denoted by the presence of two preselectors.)
Each Preselector has a apx 5 mhz bandwidth. The programming software will
give you suggested hi and lo tune up freqs when you program it. Reprogram
with the two tune up channels The high one will tune only with the one
preselector and the lower will tune only with the other, Then re-program the
other channels back into the radio and make minor adjustments to balance
everything out if oine channel is numb. Pay attention to not adjust the
wrong preselector when doing this otherwise you will go backwards.

The [HI SWR] light stays on all the time not just when I transmit and receive on my ft-920 even when I don't have my antenna hooked up. I never transmitted with out an antenna or dummy load. When I turn off my power supply and turn it back on it doesn't come on till I push my tuner button. Then it comes on and my [tuner-tx] light comes on for a split second and goes off . My [tuner-tx] light doesn't stay on like it normally does. What could be wrong and how do I fix it ? Thanks for the help, Sam , KG4HEB alphacentauri@i-plus.net

In working order, depending on cosmetic and electrical condition and
options/filters installed, it's worth maybe $400 to $600.

If the receiver ain't working, who knows? Probably depends on what it
would cost to get it fixed, or whether an average ham can fix it...

I wasn't trying to be a wise guy I just wanted more info on what he wanted to
do.
I had my VX5R with me when I was in europe this year and was able to set it up
for repeater operation in France and Italy. I think you can use the USA version
in other parts of the world with a little bit of preprogramming.

>allowing
>upgrades/bug fixes somewhere down the road.

There are PIC versions that have program code in flash memory. Some of
them can even write to their own flash, so they can load new code on
the fly. At the same time, they have a "code protect" bit, and if it
is set you can't read back the memory contents from an external
programmer. You can *erase* the memory and start from scratch, but you
can't read the code that's there initially.

But you're right, high-volume production may well use ROM parts
which are not modifiable.

Dave

HMM. I notice stores such as HRO advertise that their current inventory is $ 8,000,000.00 .. I bet the Owner could do better if he invested in the stockmarket like my 401 K plan and if he makes 10 % average then he can sit on his ass and not deal with the hassle of running 8 or so Ham radio Stores. I think the Owner is fairly smart and knows he is really making MUCH more than 10 % profit ! To say he is making 2-4% just make me think he is an idiot. I get 10 % in all my mutual funds and I am no big investor.

You obviously haven't been paying attention. 2-5% is normal on a "NEW"
radio. Now ask about the margin on "Accessories" Then you begin to
understand the picture.

You'd probably have to do it this way as many of the EPROMS have a fuseable
link and burning the link to prevent reading the code is quite popular. That
only leaves recording the control strings as they go by.

Or...reverse engineering the thing, treating it as a black box, figure out
what kind of outputs it has to have to do something with what kind of
inputs, draw the logic diagrams for each and then using Boolean algebra,
simplify the equations to get the final configuration.

Neither are easy for any one who has not done them several times at least.
You also need the background to be able to interpet the information. It's
definatley not intro to comuters 101<G>

I had one class that ran two hours twice a week for one whole term and that
was pretty much all we did. Boy, what an exciting way to spend four hours
in class and about eight studying per week

I had one class where all of the programming was done in machine code (not
assembly, but pure Hex) and some of the programs ran several K. They were
keyed in from a numeric key pad and we had to be able to run them, exit
gracefully and then rerun them (we had volatile storrage). If it didn't
exit gracefully you had to key the entire thing back in.

Hi Mike

I have a Kenwood TS-60 All Mode 6M transceiver for sale!
It puts out up to 90 watts and can be used as a mobile or a base
It operates off 12vdc and comes with pwr cord , mic amd manual.
Asking $550.00 US and I'll ship.

73, Randy

howdy all

looking for info on a mobile radio that can be materd to a laptop so that the functions of the radio can be controlled via the laptop. the radio must be uhf (450-470/512)

i am working on bulding a patrol unit for my company and i am trying to symplify the control console and save some space as the vehicle is not all that large that i have to work with. but i need to put both the radio and the laptop in the car.

i don't know if there is anything like that on the market but i woluld appreciate any info at all.

thanks
please reply in email and place computer controlled radio in the subject
thanks in advance

You misunderstand cores. The cores amadon sells are for RF not 60 Hz.
A torroid for 60 Hz is usually a tape wound core of silicon steel.
Amadon does not sell that type.
So your question is like asking a Ford dealer about Mazda parts.
I have had excellent results buying from Amadon for many years now.

I don't remember the radio, but I do recall the airplanes that
he flew. He started out with a Cessna Bobcat (a WW-II surplus
trainer known as the "Bamboo Bomber due to its largely wooden
structure), then moved on to a more modern Cessna 310.

Several months ago UPS delivered a GAP challenger to my house, my wife was home at the time. She said that the driver rang the door bell but by the time she got to the door the driver was driving off in his truck and the antenna was laying on the porch. When I got home from work I found that the shipping box was damaged, upon opening the box I found that the two (2) lower sections (and the thickest) were bent. It was my impression that it took a great deal of force to bend these sections of the antenna, almost as if they used it to play tight rope walker.

On a second occasion several weeks later they left my brand new Kenwood TS-570SG on the front steps without ringing the door bell (I was home). There was no damage but the radio sat on the steps for several hours before I went outside and found it.

I complained to UPS about this and ever since then the driver does not ring the bell or leave the item, now they just leave the yellow ticket advising me I have a package.

I for one will NOT use UPS for any of my shipping if I can help it. I am going to be selling some ham gear in the near future and plan to use alternate services.

I
> think the Owner is fairly smart and knows he is really making MUCH more
than 10
> % profit !

Probably not. there is very little mark up and lots of competition in
selling ham gear. (I used to be a dealer)

You make the money on turn over. If you can sell three rigs at 10% in one
month that is 30% for the month. Course to make 30% a month that is on your
entire inventory and your fixed costs (over head) have to be small enough
to allow that kind of margin.

Prior to some where around 1980 there was very good money in ham radio
sales, but since then it has taken a lot of work to be successful.

> To say he is making 2-4% just make me think he is an
> idiot. I get 10 % in all my mutual funds and I am no big investor.

Taking 4% per sale and 10% on funds per year is mixing/compairing apples and
oranges. 4% per sale *might* add up to 100% for the year, but I doubt it.
It *should* make 10-30% though, if it's mainly the type of equipment that
has a rapid turnover.

BTW the average of funds over the the last 10-12 years has been around
18-22%. Last year (1999) they averaged closer to 30% while in 1998 they
were even higher. Over the last 40-50 years they have averaged 11% or very
close to it.
Being retired, the market is where I get the major portion of my income so I
tend to follow it rather closely.

>

Nope. 'Tain't that simple. The mike plug/jack is an Amphenol
two conductor coax type. It carries only audio signals, no
provision for a keying line. From the schematic, it looks like
you need to trip the VOX circuitry, but I see no simple way to
do it. Certainly not as easy as just grounding a line or
applying a bias. I've seen references to "the HT-37 PTT mod"
so I know there was a commonly accepted way to do it, perhaps
even provided by Hallicrafters themselves (as they also provided
an FSK mod for this rig, I have that one.)

The panel switch that manually activates transmission is a
multiple circuit wafer switch that shifts many lines in the
unit. No easy way to duplicate that.

I have an IC-R7000 communications receiver which is considered by many to be top of the line,the rig is in excellent condition and comes with the original manual.
IC-R7000 specifications:
Frequency range= 25-1000MHz,1025-2000MHz
Frequency control= CPU based digital PLL synthesizer.Direct frequency entry.
Memories =99 tunable memories store frequency and mode.
Scanning=full scan,programed scan,mode selected scan,selected scan,memory channel scan,auto write programed scan & priority scan.
Frequency readout=7 digit fluorescent.
Frequency resolution=SSB,FM/AM,owner selectable 100Hz,1KHz,5KHz,10KHz,12.5KHz,25KHz all modes all bands.
Frequency stability==+or- 5ppm @-10c to +60c
Power supply=117 or 240 VAC
Receiving system=25-1000 MHz FM-N/AM/SSB triple conversion,FM double conversion:1025-2000 MHz,FM-N/AM/SSB quadruple conversion,FM-W triple conversion.

I will ship to the lower 48 for $700.00

Regards
Bob Stamper

Hello! Just programmed a pair of UHF MCX1000 radios on some ham frequencies (441-449MHz). The radios work well except for extremely poor receive sensitivity. (incoming signals rarely break squelch/turn on the yellow busy light). Radios were previously used in the 453MHz area, but I can't believe that the front end would be that "deaf" just slightly below there! (The radio is the 440-470MHz version). Any suggestions would be appreciated. Thanks for your help!

Well, that would make life more difficult. I haven't actually pulled my radio
apart (yet) to see what they use for a processor (TM-V7A). I guess I was kinda assuming they did something similar to what we do with many of the products we make where I work (HP), putting the code in flash thereby allowing
upgrades/bug fixes somewhere down the road.

That would add cost though, so I can see where they might just get the firmware to a point where they decide it's "bug free" and ship it in some
un-dumpable form. Any upgrades/fixes if ever necessary would require returning
the unit for part replacment as opposed to simply downloading new code.

Ah well, too bad if that's how they're doing it. There are a few things I'd
sure like to change...

Greetings, Hallicrafters fans!

I am parting out a Hallicrafters S-107 receiver. No knobs,
no glass dial, no speaker, no tubes. Otherwise appears to
be complete and not rusted/corroded inside. I guess I ought
to note that this is a Mark II model (uses 7- and 9-pin mini
tubes as opposed to the earlier models which used octals).
What do you need?

73,
Dean, K5DH

Message-ID: <396c964f.4400066@news1.coam.net>
Source record: 75736

This radio has seen some use. Cosmetics is a 6 out of a 10. The letters dj580 have rubbed off. The key pad is like brand new so you can see the numbers just like it wasn't toched.
The battery has been rebuilt. I took out the 7yr old nicads, that's right lasted 7yrs, and replaced them with NiMh ones and it last twice as long. There is a piece of plastic on the side that broke off while I was rebuilding the battery, but that doesn't impare the use, it still locks in place.
I have the alkaline pack so you can use regular batteries. I replaced the stock antenna, which is a piece of junk, with a Yaesu dualband one and the performance is better. Standard wall charger. You have to charge the new NiMh batteries a full 24hrs with this charger, but they last longer. You also know, no memory effect with this type, so you can top off when you want.

Price: $100 shipped prepay, COD or PayPal service.

I bought a cable/sw from AES a few months ago. Just took apart the db-9 connector to look and see. There is a little PC board in there with about 5 surface mount transistors, 10 or so surface mount resistors, a couple of surface mount caps, etc.

The TMV7 and TMG707 (kenwood) had a similar deal, took a while but someone came up with a schematic. It is too small and compact for me to trace out.

good luck

From: ns1r@aol.com (NS1R):
>".... I bet the Owner could do better if he invested in the stockmarket like my 401 K plan and if he makes 10 % average then he can sit on his ass and not deal with the hassle of running 8 or so Ham radio Stores. I think the Owner is fairly smart and knows he is really making MUCH more than
>10% profit ! To say he is making 2-4% just make me think he is an idiot. I get 10 % in all my mutual funds and I am no big investor 73's Tim".....
This subject thread seems to come up every few months or so & as an Amateur Radio store dealer I was going to resist but.....here goes:
Statements like "makes me think he's an idiot" actually show your ignorance to how retail & business work. As far as the actual radios go, most informed people know that dealers are Lucky to get 10% gross profit on the sale. Take your incorrect "informed" "mutual fund" example: Say YOU put $200 in your "10% no-hassle" mutual fund, & I on the other hand buy a 2M/440 HT for the same $200 & sell it for $220 (10% gross). At the end of the year you end up with a total of $220, and assuming I Only sell 3 radios a month (keep the $20 profit from each & use the original $200 to buy another radio etc..) I end up with $920 ($720 profit) vs the $20 from the "no hassle 10%" mutual fund at the end of the year, with both of us only tying up an original $200. So guess who's the REAL idiot at the end of the year??. Most Amateur dealers shoot for 10% gross on radios, but credit card fees & the nature of the hobby that has most customers calling every 800 number coast to coast to find the lowest price in the country & try & save an extra $7 bucks on an $800 radio, before they walk in the store, in most cases makes it much lower than 10%.....
Imagine, for a minute, if another industry, such as "Garden supplies" , worked like the ham radio mentality. Guess what would happen if almost no one bought a hose, fertilizer, shovel or rake locally before flipping thru pages of gardening magazines & then calling every discount mail order house coast to coast for the "best" price, even if it were only $10 cheaper than a local store. Soon, there would be very few places locally that carry Garden supplies, many US mfgrs of equipment would dissapear, & profit margins would drop drastically for the dealers still in the business, as their price would have to be in line with the lowest mail order discounters or they would get very little business.....Sound familiar??

I hate the shilling, baiting, and other bogus activity that goes on on on eBay, but I admit I do browse there often, and have bought about 5 items since 1997. If you want to *buy* from eBay, the key is to bid low and often. If you see something you like, put in your maximum bid and sit back. Don't re-bid if someone else goes higher. Just go on to the next thing. You will lose 90% of the auctions you bid in, but if you are persistant, you *will* get some nice deals. I got a very nice Hallicrafters S-120 for $11, a nice Drake T4X-B for $68, and a Bencher set of paddles for $18. It took me about a year, and I missed about 50 other auctions, but I am very happy with what I got, it is all working fine. I do it casually, but if you are more systematic than me, and check the listings every other day or so, you could really pull off some wicked deals.

I don't know which number you have called, but be sure you are using the correct technical support line, not the sales or general number. Most companies (with the notable exception of Bill Frost at Drake) will not answer technical questions by email, unless they are very, very simple (ex: what is the permeability of core-X?). Amidon probably received several hundred emails, at least, of this type daily, so it is impractical to answer them, and as we all know, you are not likely to get the best answer via email.

Source record: 75789

Everyone may wish to consider using USPS Registered Priority Mail with Insurance and Delivery Confirmation for shipping. I've used the post office exclusively for the past year and a half, selling and buying, without any damage claims. Shipped an Omni-C, VFO, and PS to a fellow in central PA from my QTH in central Illinois last fall - mailed the three boxes Saturday morning, and he received them Monday afternoon! And, you receive this service at a rate typically equal to or slightly less than UPS Ground! Registering the Priority Mail deliveries ensure that the goods will be delivered securely with a signature - no parcels left on the porch in rainy wx! I don't work for the post office, just a vy happy customer who has used Priority Mail very often and with great satisfaction. For example, I just bought a pristine Kenwood TS-520S and had it shipped via Priority Mail. It arrived (the outside shipping container) without the slightest deformity, and the rig inside was perfect. And, as most of you probably know, the old 520s weighed in at around 40 to 45 lbs.

I will defer to the other post with a URL. SWL means "short wave listener"
and 146 MHz isn't really short wave. There *is* a lot of activity there and
you should have fun depending on your location- vhf is local.

I hope that url in the other post gets you on your way.

Once triggered by high SWR, the indicator light will stay lit until the next time the transmitter "sees" an acceptable SWR load. If the SWR load is way off (greater than about 4 or 5:1) the tuner will instantly detect this and not even try to tune the antenna, the high SWR indicator will light and the tuner will stop.

I would suggest you hook the rig directly to a 50 ohm dummy load and check it with both the tuner in and out of line. If it checks OK, then it's time double check your antenna(s) and feedlines. One other point, make sure that you are transmitting into the right antenna port (A or B) depending on where you have connected your feedline at the back of the rig.

If all of this checks out, then it maybe time to give Yaesu a call, but more than likely it is an external problem.

Good luck and 73 de W6DKN

Source record: 75600

All that information should be in your manual you got with the receiver, in the "receiving ATV" section... Just hold the function key and hold the multi-key to the right until a setting comes up, you will be able to scroll from -63 to +63. These numbers don't seem to mean anything, but if I recall, 6 MHz was approximately +3. I am quite sure you can only get into this setting when in the FM-TV mode "FTV", as AM-TV broadcast is 4.5 MHz.

Source record: 75601

Only comments I have about the IC-Z1A is that I thought it was a neat idea when I first saw it, however I know of a few people that got rid of the Z1 they bought because they found the speaker audio was terrible. When looking at the radio from the side, it scared me when I saw that the radio without battery and display on it looks like this...

```
||
||
||
||__
||
||
||
```

Looks like it would snap in the middle, though I've not seen it happen...

As far as I know, aside from the crappy speaker audio, the remote control functionality works just fine.

I was interested in getting one after selling my Yaesu FT-530 years ago, in which I had Yaesu's MH-29A2B speaker mic, which had a display and a few controls on it. The Icom solution had more controls on the remote, and was ultimately cheaper, but "sounds" like the Yaesu was the better system. The MH-29A2B speaker mic also works on the FT-51R...

The software is CE -5 and maybe you can order it(I think they sell it
only to dealers)from YAESU parts.
As for the cable is just a level translator.I have made some discrete
component units for me and some other service technicians for field
use.It's use is to bring the RS-232 level(+15V/-12V approx)to a TTL
5V level used buy the uPC.Also puts the RXD and TXD signals of the
RS232 port at one pin of the RJ connector.The selection between TX/RX
is controlled buy the uPC when you press PRI or A switches.For more
infos send e-mail at sotris@aspisys.com.

2790. MFJ 9040 vs 9020

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-13 00:00:00 UTC
From: Fred Alvarez <fredalvarez@hotmail.com>
Message-ID: <Xjgb5.30535$aB6.142877@typhoon.hawaii.rr.com>
Source record: 75605

I am interested in buying a complete QRP solution, but I am having difficulty figuring out what is the best option.

What is the difference between the MFJ 9040 with a CW module and the MFJ 9020?

Which rig works/performs better?

What else would I need to purchase in order to have a "complete package"?

I was informed that the 9040 with a CW module will not perform well (cw dxing), is this true?

What does the 9040 lose that the 9020 provides?

Is 20m a good freq for CW and SSB?

How much are your package deals?

Why would I need a filter for my rig, do I really need it?

I plan to use my rig outdoors, will they support my plans?

I ordered a microkeyer (iambiac paddles) will they work with these rigs?

Thank your for taking the time to answer my questions.

Thanks
WP4BXS

You can buy the cable and ALL of the software from AES or HRO. The part number is VPL-1D and the cost is $125. That gives you the level convertor and two adapters. It will program the mobiles and MOST portables. An additional cable is needed for the FTH2070.

2805. GE Ranger Low Band Tranceiver Manual

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-13 00:00:00 UTC
From: L&RK <jewel89@innova.net>
Message-ID: <sms4o319nd630@corp.supernews.com>
Source record: 75620

Anyone have an extra service manual or even a copy of the schematics for a GE Ranger Low Band Transceiver (100 watt). I'm in dire need of one. Jerry at jewel89@innova.net .

2806. ICOM IC-2400 failure - HELP

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-13 00:00:00 UTC
From: Giovanni Mazzola <g.mazzola@tin.it>
Message-ID: <8kl3iu$3rs$1@nslave2.tin.it>
Source record: 75621

A friend of mine needs to repair his radio. It suffers an extremely reduced sensitivity on the VHF band, so I think that the failure may be on the front-end.
Since we do not have the schematics of this radio, if anyone could kindly scan the VHF front-end section of this gear and e-mail us we would be grateful.

Thanks in advance and best 73's.

Giovanni, IT9XXS

If it's FM repeaters you want to hit, you might start by getting a copy of the ARRL's Repeater Directory. That'll tell you what repeaters are located in your city, which bands they cover, and whether the repeaters are open to all or require special access tones to get in.

If you're in a big, major city, you'll have plenty of repeaters to choose from on each and every VHF band. But if you're in a smaller city, you're choice could be more limited, and you may end up buying a rig and discover there's no repeater around for it to hit.

Having said all that, the hand-held rigs from Yaesu/Icom/Kenwood all work pretty well, if you're close enough to repeaters for milliwatt power levels and a built-in duckie antenna. Otherwise, the mobile rigs from Yaesu/Icom/Kenwood with, say, 10 to 50 watts of power, plus a separate antenna, may be what is needed.

If the manufacturer did not provide a way to install a tone board, why does my FT-207R instruction manual have a picture of and instructions for a PB-2062 Tone Squelch Unit? To change the tone frequencies required the changing of two resistors R501 and R502 on the tone board.

Hi,

I'm looking for a functioning scanner so that I can monitor the
CFS in my area (very prone to fires). A large chunky unit is OK.

Also, I hear the CFS units are switching to the police
frequencies - does anyone know anything about this?

Source record: 75690

Chuck, you are correct - the 207R did not contain a CTCSS encoder. That vintage radio typically required the installation of an SS-32 dip switch programmable encoder board (which was usually a do-it-yourself proposition since the manufacturers did not at that time provide a way to install a tone board).

I can't help much on the internal connector. I owned a 207R some years ago but I don't recall ever opening the case.

The six-pin screw lock speaker mic connector was relatively common on radios of that era. At hamfests I've seen some Yaesu mics that would fit that radio so you might want to keep your eyes open. Be aware, though, that mics from other manufacturers that used the same connector typically did not wire the mic the same way as Yaesu did for the 207R.

Jeff,
I don't think it is possible to replace the SMA connector with a BNC without doing major surgery to the radio. I suggest you buy an antenna with an SMA connector already on it (if I'm not mistaken, COMET has one).

73,
Frank

Another nice feature to look for is being able to remote control the
rig from another radio via DTMF. My Alinco DR600 doe sthat, so does the
Kenwood TM733, probably many others. Comes in handy when you want to be
able to change freqs you are cross-banding through.

Thanks Bob!

I am in Houston, so there are probably a lot of repeaters to hit.
By the looks of your e-mail, you are in TX also!

I guess I will have to be on the look out for a used unit someone maybe
getting rid of.

Thanks again!

I'm in San Antone, but I used to be in Houston. It's a great city for repeaters -- there's dozens, perhaps hundreds, and they're on all bands, from 6m up through 1240 Mhz.

You might try http://www.bfwweb.com/hars/ for a local ham store.

Go to this URL and read for yourself:
http://www.eham.net/reviews/detail/418

My comments are on page 2 and list the differences between 756 and 756 Pro.

The radio does indeed have a signal (DSP filter) blow-by problem on CW.

IMHO to answer your question, YES. Despite the radio weaknesses.

2852. **"Paddles" for Paddle Switches: TS-520SE (Kenwood)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-14 00:00:00 UTC
From: xtx99@aol.com
Message-ID: <20000714150355.20914.00000564@ng-fs1.aol.com>
Source record: 75562

I recently purchased a used Kenwood TS-520SE (I'm new to this...am taking my first test next week). The left side of the front panel has 5 paddle switches including "Send Rec" and "Off Slow". The switches appear to work but it seems that the plastic "paddles" that apparently pop into the switches are missing on these two paddle switches. For me to work the switches I've inserted the end of a pencil into them. I've called several Kenwood parts retailers with no success. The Ham that sold me the transceiver said I'd have no trouble finding the "paddles" for the switches (he's since moved). Any suggestions are appreciated.

Source record: 75563

Alinco and Pyrme both have 6 meter FM rigs, also Cherokee made one recently, but bowed out of the market. 6 meters FM is a little spotty, but any major city should have a couple, and the open terrain coverage is better. The Alinco DRM06(?) is the only one I have seen but never used.

For "all mode", in the used market, Kenwood has made several radios. The TS-6xx has a whole family of rigs.

The TS-600, is a 6 meter only, 10W.
There HF/6meter that also run 10W on 6 meters which are the TS-660, 670, and 680.

The TS-690 ran 100W as well as the current TS-60 6 meter only.

The TS-600 should run $300 and up, with price increasing as you move up the model line.

There are also the a few VHF/UHF "modular" rigs such as the all mode TS-790 and the FM only TM642/742 the 6 meters can be added as an option.

Yaesu and ICOM both have similar rigs.

And of course, most manufactures have all band rigs now, i.e. ICOM IC-706mkIIg, Yaesu FT-100, etc.

I would consider something that covers other bands as well as 6 meters. If you find less activity than you like, you have other bands to switch to as you want. The TM-642/742 with 6 meters may be a nice choice. The 742 has 450MHz and is slightly less expensive and the 220 642. There is also a 1296 version, but I don't remember the model. Again, check you the competers.

Dear OM:

The grey plastic paddles (one used for the Heater switch in the TS-520S) are discontinued, but the black plastic paddles are still available, and the part number is K29-0370-00. As you know, the Heater position was changed on the TS-520SE as the "Wide/Narrow" filter selection switch and all plastic paddles are black.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-14 00:00:00 UTC
From: Scott <w7rfi@mindspring.com>
Message-ID: <8ko3o8$5nt$1@slb7.atl.mindspring.net>
Source record: 75572
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

For Sale: DB Products Model DB430-C 450-470MHz, end-mount Yagi, 6 element antenna. I am presently using this type antenna on UHF Packet at 439 MHz (9600bd) with very little standing wave. Boom is 38" in length and elements are 3/8" welded aluminum. Feedline pigtail is 24" of RG-8 type terminated with an Amphenol N male connector. A similar picture of this antenna can be seen by clicking on the photo at <http://www.decibelproducts.com/30799/db432/db432.html> The DB430 pigtail comes out the rear of the boom and not adjacent to it like the DB432.

The DB430-C originally retailed for upwards of $250. Price is $75. Buyer to pay actual shipping.

PSE contact me direct at <w7rfi@arrl.net>

Source record: 75574

I'm setting up a club station at my school and I'd like to know if anybody has a used Kenwood TM-2?1 (221, 231, 241, etc) 2-meter rig in fairly good shape for sale at a reasonable price. Must be unmodified and have PL transmit capability. I don't care if it has the PL (CTCSS) receive decoder or not.

You'll make a lot of kids who are currently studying for their tickets awfully happy if you've got one you will part with. Or, what would you like in trade?

Need to know the kind of final amplifier transistors used in the Tele-Tec V175 linear amplifier. This is the 2-meter amplifier. The manufacturing company has gone out of business and can't find a repair facility. The transistors are unmarked. They are stipline-type transistors with a case like the Motorola 316A01 case. It has been a good amplifier and sure do want to repair it. Any information will be appreciated. K5DZM

Pardon me for this blatant commercial plug [grin], but my firm's AR-147 is priced below $200. at Ham Radio Outlet stores. Details on the unit are on our Web site at

http://www.pryme.com

Feature highlights:

-A FULL 60-WATTS OUT!
-AM air receive direct frequency entry
-BOTH CTCSS and Digital Coded Squelch standard
-TX Range: 144-148 MHz
-RX Range: 118-171 MHz including AM airband
-MARS and CAP capable (permits are required)
-3 power settings: 60, 10, and 5 Watts (H/M/L)
-80 memories plus a CALL channel
-All memories store any offset or tone
-Auto Repeater Offset
-9 DTMF autodialer memories PLUS a built-in redialer
-Programmable band and memory scan modes
-User programmable Time Out Time
-DTMF paging
-Dual frequency watch
-Direct frequency entry using multi-function DTMF microphone
-PC programmable (with optional programming software)
-Auto Power Off
-Frequency or channel display modes
-4-step display dimmer
-Power line over/under voltage protection
-Size: 1.5" (H) x 5.5" (W) x 6.25" (D)

And if you need anything from us - we're right over the hill from your home - You're in Diamond Bar, we're in Brea!

Actually, Scott is in Houston, where 6 meter activity can be a little
tricky, what with NBC/Channel 2 being in the 56 Mhz region. He might
be better off on other bands, depending on his neighbors.

Dear Joe:
Thank you for your inquiry. We sincerely apologize for the condition in
which your merchandise arrived. We will be happy to enter a Damage
Inspection Report. Please forward the following information in addition
to that which you have already provided:

- shipper's name, business name, address, ZIP Code and phone number
- receiver's name, business name, address, ZIP Code and phone number
- shipper's UPS account number
- tracking number
- ship date
- weight of package
- invoice number, purchase order number, package ID number (if applicable)
- value of damaged merchandise
- a detailed description of the damaged item (including model number, color, size, etc.)
- discovery date
- disposition of the package (whether it is with the shipper or the receiver)

I use the MFJ 9420 with cw board and it's a real nice
portable rig. Right now I use it in the car and it still surprises me.
For me a 9420 is a better choice especially when you get both worlds (cw
and ssb).

I have a computer business and my time is worth $25 an hour. It's not worth
my
time to bid and rebid to try to get a good deal on eBay. Examples: I wanted
an MFJ-922 Keyer Combo, going for about $60-75 on Ebay. Bid a lot of times
up to about $60 and quit. Found one in excellent condition at Little Rock
hamfest for $35. I wanted an MFJ-945E Mobile Antenna Tuner. Looked
everywhere, here, QTH.Com, etc. No one had one at a decent price in
decent condition. Bought a new one with warranty from R&L in Hamilton,
OH, for $89. Not worth my time to spend a couple hours looking for a deal on
anything worth less than $100. If you have the time and nothing else to do,
good luck. Jst my $.05, ($.02 adjusted for inflation).
73,
Darryl, KK5IB
PS HF gear is on QTH.COM and eHam.net

Source record: 75590

One of Uniden's all-time most popular scanners! Hasn't been manufactured for over 6 years, but still a favorite today. Features 200 programmable channels plus one-button weather to quickly access NOAA weather frequencies active in your area. Frequency coverage: 29-54Mhz, 118-174Mhz, 406-512Mhz, 806-823.9875Mhz, 849.0125-868.9875Mhz, and 894.0125-956Mhz. This unit has not been modded but I understand that there are some interestesting mods for this one. This 200XLT is in very good condition for it's age, I has normal wear but not all beat up and has been in it's protective case most of it's life. Comes with stock rubber antenna, Bearcat AC adapter/charger and carrying case. I do not have owner's manual with this but not much to it and i'm sure if you really wanted one, you could find one on the net!!.
I will take $160 plus some help with shipping.

>What is the difference between the MFJ 9040 with a CW module and
the MFJ 9020?

I am guessing you are thinking of buying the SSB rigs and using
them with the CW option. They will both work fine on CW with the
options. If you went with just the CW models the CW filters are
probably narrower.

>Which rig works/performs better?

Probably about the same.

>What else would I need to purchase in order to have a "complete
package"?

An antenna is a good start. 8-) Power supply, SWR meter, coax,
tuner if you use a multiband antenna.

>I was informed that the 9040 with a CW module will not perform
well (cw dxing), is this true?

40 meter DXing is a little harder than 20 meter dxing due to
getting the antenna up to a decent height. You need more room for
a 40 meter antenna as a half wave dipole is 66 feet and you want
it up that high if possible. You can either have to go with a 40
meter 1/4 wave vertical or get your dipole up really high around
66 feet. You can use a commerical vertical but they won't perform
all that well on 40 meters in spite of what their ads say.
Lot's more DX activity on 20 meter CW. Dipoles only have to be up
34 feet and 20 meter dipoles are shorter (34 feet). All around
easier to work with.

>What does the 9040 lose that the 9020 provides?

Not sure probably not much. They are very similar radios.

>Is 20m a good freq for CW and SSB?

YES! I consider it to be the band for CW/SSB domestic and DX.
Always seems to be open somewhere.
40 meters is strictly local and is only open to about 600 miles
or there abouts during the day. At night is when it is possible
to work DX on 40 meters.
If you want to work DX then 20 meters is the way to go!

>How much are your package deals?

????

>Why would I need a filter for my rig, do I really need it?

A fitler really helps when the bands are crowded. Invariably there will someone close by when you want to really work someone. The filter reduces the adjacent noise quite a bit. Also when the bands are noisy it will help the signal you want stand out a lot more. Get one!

>I plan to use my rig outdoors, will they support my plans?

Yes! Make or get a portable antenna that you can put up easily. Simple wire dipole is best. Put it up in a inverted vee and you will be on the air easily. Get a 7 amp hour gell cell too!

>I ordered a microkeyer (iambiac paddles) will they work with these rigs?

Yes!

>Thank your for taking the time to answer my questions.

You are welcome!

Also if you really want to get into QRP join the QRP-L mailing list. It is a high volume mailing list dedicated to QRP. An excellent place to answer your above questions! ARCI QRP club keeps copies of the messages on their web site. Goto http://www.qrparci.org

Hope this all helped in some way!

Most high-volume electronics (ham or otherwise) use ROM, or even
mask-programmed devices (economical when you want a couple hundred
thousand...). You can't change them, you almost certainly can't
read them, and even if you did, you don't know how the processor
works. Doesn't leave much room for fun. :-(

The stuff I do for a living boots from flash and uses
processors that are 68k derivatives. But that's different,
and a far cry from the brains of a 2m handheld.

>**********
>to send direct email remove "fake" from address

If you go to a good paint store, they can computer-match any paint color. They have a computer that will scan a piece of the object which your are painting, and the computer figures out what color the piece is, and writes a paint formula for the exact color.

In your case, I'd suggest you take the whole Icom cabinet in, and have them scan right off the cabinet. Then they can then make up the custom paint, and they can make up a paint that is appropos to the metal housing, and it will work well.

Only downer, there's usually a 1 or 2-gallon minimum on getting custom paint made up. Which is way more than you really need. On the other hand, you can probably get on e-bay with your leftover paint and sell "computer-matched custom paint for the Icom 735!!!!!!!!!!!"

(And, since I have an Icom 735, I may want of a viel of your leftover paint, for touchup purposes.)

(Or, hey, contact Icom; they may have something in stock.)

Best of luck,

Bob

2892. Re: DTMF codes for repeaters?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-15 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <39710641.3DD61C90@dialpoint.net>
Source record: 75449

The tones are usually set to a default by the specific controller being used. The repeater owner then sets them up to whatever code he wants them to be within certain limits. The best way is to cnotact the person sending the tones and ask him who or what club is funding the repeater. Then offer to help out with the funds. Then ask for the codes if you join the funding.

Hello,
Right now I have a ADI AT-600 and want to depart with it for another dual band unit. I am looking for an HT to add to my collection. I would like a dual bander that will rx alot. I need it to cover AIRCRAFT and from 138-174 range and 440-470 at least. I would like a name brand (Icom, Yaesu, Standard, ADI, Kenwood) and a resently made unit. 98-00 Does anyone have what I am looking for?

If you do please email me back.

Jeffrey - N9MXT1@AOL.COM

2906. APC Smart UPS 2000 schematic needed.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-15 00:00:00 UTC
From: Tony <tony@newbiehack.com>
Message-ID: <lbRb5.44139$i5.580197@news1.frmt1.sfba.home.com>
Source record: 75508

I have a dead one, and APC will not give me the schematic. All their service centers have them, but they want me to "trade in" my unit and spend $700 more dollars. No way....

If anyone has the schematic, please email me to arrange. I'll pay for copies, etc..
tweak my email to reply directly.
tonykara@nospam_home.com

Thanks,
Tony

It requires the purchase of two parts to get the memory functions but there
is a keyer out there that utilizes the Bencher paddles which are some of the
best I hvae ever used and felt.

Guys:

I am still looking for a trade for my Kenwood TS-940SAT. It is in superb condition and is loaded with the optional AM filter, CW filter, and VS-1 voice synthesizer. It looks beautiful and operates the same.

I am looking for a really clean TS-850SAT. No beaters or smokers or dings or scratches please! Please email description of radio or call to discuss a trade.

I will also sell the TS-940SAT. Because of the radio's age and condition I am asking $1000 plus shipping. I will consider removing filters and VS-1 and selling the TS-940 for $850 plus shipping. Remember this is a 20 mil radio, the last production run of 940's with all updates and engineering changes.

You can see the TS-940SAT by clicking here:
http://www.netohio.com/ebay/940.jpg

I am currently building the Fireball 40, but I don't think that it will meet my needs. I was looking at the MFJ 9020 CW package that MFJ offers, it includes the transceiver, tuner, antenna, powerpack. I can also purchase a filter and iambiac keyer board for another $70-80. Therefore, about a $430 investment. I am concerned that I may not like the MFJ or that it will not perform well. So you think that I should get the SSB version and get the CW module? How is your CW QSO's? Is the module for straight key or paddles?

NEW: Pay 50% now, 50% after filing! You won't get THESE arrangements anywhere else!

We'll NEVER throw you that tired old line which states: "Payment in full must be received BEFORE services will be performed..."!

We are now accepting applicants for the second LPFM filing window. We will only accept a limited number of applicants for the second LPFM filing window. To be one of the clients for the second filing window (Connecticut, Illinois, Kansas, Michigan, Minnesota, Mississippi, Nevada, New Hampshire, Puerto Rico, Virginia, Wyoming), go to our credit card acceptance page or contact us by whatever method you prefer from our contact page.

Some lessons soon to be learned by LPFM applicants: At LEAST four of the applications which will be returned as "flawed" are from applicants who assured me, personally, that they "can file this application without having to pay for any technical help"... Looks like they fell into an NAB sponsored(?) "dis-information" trap...

While needless damage can and does occur during transit, your bigger problem is the shipper. They should not be sending out anything of value with no-signature releases.

Even if you receive a damaged package on your doorstep, (1) call UPS before you open it or (2) call the shipper and have them initiate a claim. Then, too, the shipper might need to do a better job of packaging (like a fiberglass or cardboard sleeve around your antenna) so tell them about that.

Tell your shipper to NOT use the no-signature release. This used to be the only way UPS worked, but they opt for (or default to) no-signature because hardly anyone is at home during the day.

UPS is very service-oriented and if you ask, they will make good on every legitimate claim. The drivers will bend over backwards for you too, if you ask them for help,

(No, I don't work for them)

I've got an ICOM T-81A, which I like (despite their gawd-awful pseudo-alphameric display and the goofy "thumb" button). It is conveniently small and performs pretty well (except for 6M where it only does AM or FM and is about as sensitive as dental-fillings).

It runs mid to upper $200 range for price, so it's above what you asked for but it's probably your best bet in the "small" form factor. It puts out 5 watts.

Is your company using the VX1R on Ham bands? Or are you using them illegally on commercial bands? Hmmm..either way is illegal
Any of course you are not just using them as receivers as you want a high power output.

Life is good huh?

Neither of those "problems" bothers me as much as the thin/weak audio
output. It's not just the internal speaker - it's on any speaker-mike.

I have the following manuals forsale. all prices include postage to any address in the u.s.

1) Original Johnson Viking Valiant operating manual. $40

2) Original Hammarlund HQ-145 tech description and operating manual. $30

3) Original Drake TR-3 instruction manual. $20

4) xerox copy of TR-3 manual. $7

5) xerox copy of Drake T4XC very nice and bounded. $12

6) Original Collins 32S-1 instruction book as new (from surplus sales) $22

7) xerox copy of 32S-1 manual. $7

8)3 xerox copies of the Johnson Ranger 1 (dated 1-55) bounded $12 each

90) xerox copy of National HRO-7 manual. $7

10) xerox copy of Johnson Pacemaker operating manual. $9

I have for sale the following:

1. TS-520. Cosmetically a 9, electronically a 10. 5 hours on new finals installed 2 years ago, then stored in my closet. No mic, used strictly CW less than 50 watts. Original service manual is in great shape, the original operations manual sucks. $275.00 plus shipping from 90706.

2. Unbuilt Ten Tec 1340 (40M) QRp transceiver. Never opened, just like I received it from Ten Tec. Built 3 of these, no time for this one. $75.00 plus shipping from 90706.

Thanks much,

Norm/KQ6SD

Yeah, right.

2940. DTMF codes for repeaters?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-15 00:00:00 UTC
From: Robert Joshua Chen <rjchen@Stanford.EDU>
Message-ID: <8kqk4h$8or$1@nntp.Stanford.EDU>
Source record: 75542

I've been monitoring repeater activity in my area for about
a week now. Occasionally, I hear somebody doing a signal test in which
they would type in a two tone DTMF code and the repeater would respond
with an s-report. I'd like to be able to do this also since I'd like to
use least amount of power I can get away with and still hit the
repeater. The question is, are these tones standardized for all
repeaters? or are they specifically programmed according to the repeater
operator's preferences? If they are standardized, then where can I find a
list of these codes?

Thanks,
-RObert

Source record: 75544

The Icom 2100H is still a good one and for the money can hardly be beat.
Last price I saw was $179. Probably being replaced by a newer transceiver
soon. I've used Icom 2 meter mobiles for many years and they have been good
with parts and service. Intermod is always a question with any radio. I've
never had bad problems until I was in the lion's mouth and then only for a
mile or so. Just depends where it will be used.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

Well I have never heard anyone brag about owning an ADI mobile. The one guy I know that owns one says it is terrible for intermod but it was cheap to buy. I own a Yaesu 2600M and I never have had an intermod problem but it costs a little more. I have owned a ICOM 2100H and it wasn't has good with intermod as the Yaesu.

You get what you pay for simple has that!

I have for sale a Kenwood PS-430 power supply in very good condition.......The front face has a very small scratch and the top cover has a few small scratches not really noticable.....It works fine and will take $100 plus shipping.....I can be reached at (508) 821-2993 or e-mail.....
WZ1U Steve / Lakeville, Ma.

2948. Help - Naval Academy ham radio club in danger!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-15 00:00:00 UTC
From: k3for@aol.com
Message-ID: <20000714223137.20048.00000252@ng-fj1.aol.com>
Source record: 75596

Help!

I am looking for other Naval Academy graduates or US Naval personnel who can assist me in saving the amateur radio club at USNA.

I have been the officer rep for the past 2.5 years, but a decision was just made in the past 48 hours (over the summer while the mids are conveniently out at summer training or on leave) without notice or discussion, to disestablish the station W3ADO (also Navy MARS station NNN0NNN). Perceived lack of participation, lack of knowledge of our various missions and accomplishments ("oh, ham radio is dead..."), and funding probably played a role.

Mailing address for support letters:
Captain Sam Locklear, USN
Commandant of Midshipmen
101 Buchanan Road
US Naval Academy
Annapolis, MD 21402

cc me at:
Ryan "Skip" Johnson
510 Norton Lane
Arnold, MD 21012
k3for@aol.com
if you can

Or if you can't write a letter, please email me something and I will forward it to the Deputy Commandant by email.

Thank you ! I only hope its not too late -- I have to run down there and see if they've thrown out the gear already...

FS: IC-2350H

IC-2350H 2M/440 MHz Dual Band Mobile

Dimensions: 5.5 (W), 1.6 (H), 8.1 (D), 2.6 lb
2 M (50 W) 440 MHz (35 W)
Wide Band Rx (118 MHz - 174 MHz)
110 Memory Channels
PL Encode Built-in
Built-in Duplexer
Auto Repeater Shift
Seven Scan Modes, including Fast Scan

IC-2350H SPECIFICATIONS

GENERAL
Frequency Coverage:

VHF:
Transmit: 144.00-148.00 MHz
Receive: 118-174* MHz (*guaranteed 144-148)
UHF: 440.00-450.00 MHz
Mode: FM
Number of memory channels: 110 (100 regular, 2 call, 4 scratch pads and 4 scan edges)
Antenna Impedance: 50 ohms (nominal)
Power Supply Requirement: 13.8 V DC+/-15% (11.5 A)
Usable Temperature Range: -10°C to +60°C; +14°F to +140°F
Frequency stability: Less than ±10 ppm
Tuning step increment: 5, 10, 12.5, 15, 20, 25, 30 or 50 kHz
Current Drain (at 13.8 V DC):
Transmit at high power: 11.5 A (VHF); 11 A (UHF)
Receive: 1.2 A (squelched); 1.8 A (max. audio output)
Dimensions (projections not included): 140(W) x 40(H) x 204.5(D) mm, 5.5(W) x 1.6(H) x 8.06 (D) in
Weight: 1.2 kg; 2.6 lb.

TRANSMITTER
Output Power:
VHF: 50 W, 10 W, 5 W selectable
UHF: 35 W, 10 W, 5 W selectable
Modulation System: Variable reactance frequency modulation
Max. Frequency Deviation: ±5.0 kHz
Spurious Emissions: Less than -60 dB
Microphone Impedance: 600 ohms

RECEIVER
Receive System: Double conversion superheterodyne
Intermediate Frequencies:
VHF: 1st 17.2 MHz; 2nd 455 kHz
UHF: 1st 30.85 MHz; 2nd 455 kHz
Sensitivity: Less than 0.16 ΅V (typical) for 12 dB SINAD
Squelch sensitivity: 0.13 ΅V (at threshold)
Spurious and Image Rejection Ratio: More than 60 dB
Audio Output Power: More than 2.4 W at 10% distortion with an 8 ohms load.

This one is used but never abused (8+ easy). I bought it new four years ago and it has functioned exceptionally well ever since.

No mods have been applied

Reason for selling. Make room in the truck for the FT-100

$295.00 plus shipping if needed

e-mail me at km5bh@swbell.net

I can't speak about ADI mobile radios but I can certainly say that my AT-600 HT is the best of the recent crop of HTs in terms of intermod rejection. I tried a number of HTs at my local dealer and came away with the '600 for that reason. I've been very happy with my selection ever since. If they would just produce a more practical (read: larger) size HT with a better speaker...

Motorola UHF GP350 HT
16 Channels on 464 MHz now. 430-470MHz
It comes with battery,ant,desk charger. They all were new in the
middle of 98.
Looks and works very Nice! They all have a small number on
lower bottom of HT.
I have about 10 of these.
250.00 each.
And they will not be dead on arrival or money back.

Source record: 75410

Hello!

While you can physically USE a scanner for a repeater receiver, it would not work in the real world.

In general, ALL scanners are, of necessity, broad as a barn door. In other words, they pick up EVERYTHING around them. Even installing a set of cans or some very tight filters won't help that, since the typical repeater site is shared with many commercial users whose transmitters would overload almost ever stage in the scanner.

Even dedicated ham rigs...especially the modern, wide-receive ones, have a problem with intermod and overload.

Some repeaters still use the venerable old Icom 22-a or 22-s units, although even they need some additional shielding and filtering.

A better choice is a commercial receiver strip, Motorola, GE, or the like. These radios are designed for single-frequency operation, and their cases are designed to keep most unwanted signals out...although you may still need some filtering...especially against the paging operator who runs 500 watts directly to his antenna through RG-8 without band-pass filters.

You can usually find these for even less money than used ham rigs!

One other option, short of going to a pre-built repeater, is to purchase modules, such as those available from Hamtronics...the shielding and filtering still apply, but if you're handy with a soldering iron, and know your way around a bench, this can be a fun choice!

Good Luck!

Bill WA3RA / EI4VSH (ex KS3Y, KA3DXN)

Mostly cons. Unshielded, tuned circuits too wide so they pickup some of the transmitter noise, probably not as sensitive as a receiver designed for the frequency you want to receive. Probably no easy to pick off the cor/squelch circuits. The IF is probably too wide so that you pick up adjacent frequency transmissions.

From: gbowne <gbowne@email.msn.com>
Message-ID: <uwn9Uh67$GA.287@cpmsnbbsa09>
Source record: 75417

I have an interesting chance to purchase some nice RCA AM transmitters from the 1940's to 1950's (and possibly earlier) in various stages of completeness very, very cheaply before they are broken up for parts and surplus.

First of all, does anyone know what models were made in that era and can give me the numbers and data?

I need manuals ; i.e. ; Parts, service, mainenance, owners, installation, etc.

Are original parts and tubes still available? If anyone has anything that will work with these transmitters email me with what you have and prices.

They will be made to go back on air by a local non profit AM radio station.

Thanks,
Gregory Bowne

"mdonovn" <mdovovn2@bellsouth.net>
shared these priceless pearls of wisdom:

->Mr Wier,
->
->Define Idiot.

To start with, Captain, somebody who can't spell my name right when it requires nothing more than a snip and paste.

I see a Captain referred to along with Mr Ryan Johnson, who
->happens to be a Lieutenant and not a Commander, plea for help in a mater
->that should interest any amateur radio operator.

Did they teach you how to spell "matter" at the Academy, Captain? Damn but we wasted a lot of taxpayer money on you.

->
->I for one see ANY plea to fellow HAMs to aid in any school club station a
->positive step in promoting the art of Amateur Radio.

As do I, sir, but sure as hell, not in an "equipment" heading. Learn how to use the 'net, sir.

->I am impressed by VP, A&P and CFI but just to let you know ....

And to let you know...
->
->Jake Donovan
->Captain USN
Means that you've got more stupidity stripes than good sense

->Fleet Carrier Pilot F-4, F-14
->Test Pilot F-14 & F18
Commercial, Instrument, CFI, and probably more hours than you've got at the Oclub bar.

->Carrier Suitability Trials T-45
->MSSE MIT 1985

If this was meant as MSEE, I rest my case about your intelligence or sobriety. In any case, you wanna trade academic credentials, I'm your boy. We'll start with college prof and work our way up.

->Amateur Radio since 1969

1957. MARS, Extra, and all that good crap, don'cha know.

2973. alternative for Yaesu VX-1R

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-16 00:00:00 UTC
From: john koh <johnkoh@netvigator.com>
Message-ID: <8kq2cf$3j42@imsp212.netvigator.com>
Source record: 75452

the VX-1R is great, i have bought eight for the company
but is there a better alternative ??
something almost as small, but with bigger power output
and still within the same price level (or 20% more ?)

thx

thanks, i am not sure about the legality in your country
i am using it on the authorised frequencies in mine
which are 20 channels in the 149MHz area

the walkie talkies are used for various construction sites
and my company seems to have a fair share of ladies
so i was looking for small radios in close distances

thanks, Clint,
no software, so i am not limited on brands

the VX-1R was chosen because it offered FM radio too,
and also TV channels, which was good to monitor weather reports
there is no weather channel here :-(

also the VX-1R was 500mW which was the licensed maximum here

I have a Kenwood TS440SAT for sale / swap.Unit comes with manual,up/dwn
mic.a couple of small scratches on top edge facia [match head size]
otherwise excellent condition throughout.regularly serviced since new.This
unit puts out full power on ALL bands/modes.PRICE is $1100 AUS + shipping
OR will swap for multiband mobile rig + cash either way.
Im going touring soon and need something small but MULTIBAND hf/vhf/uhf
amateur bands. or a TS50s maybe.
contact me on rredbeak@netscape.net please,73 VK4XI.

2979. Price needed: Cushcraft 40-2CD

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-16 00:00:00 UTC
From: jronline@hotmail.com
Message-ID: <39710130.11409872@news.earthlink.net>
Source record: 75458

Does anyone know what a new, in-the-box Cushcraft 40-2CD 2-element 40 meter beam (minus assembly instructions) is worth? I think the antenna is about 12 -14 years old, but has never been out of the box. If memory serves me correctly, it seems when it was new, it sold in the $300 to $400 range.

I'm not looking for lowball figures, just fair, honest value in today's market.

TIA

Jack K2RS

2981. WANTED: shopping list for apartment HF operation

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-16 00:00:00 UTC
From: jason_hsu@my-deja.com
Message-ID: <8kr2ta$29k$1@nnrp1.deja.com>
Source record: 75460
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I just passed my 5 wpm Morse Code exam this morning, and I will be an Amateur Extra within weeks.

Here is the equipment I have so far for HF (from a relative who has not been active on the bands in years):
Kenwood TS430S rig (In a few years, I will probably replace this with a newer transceiver that operates on VHF/UHF as well as HF.)
Kenwood PS430 power supply
Kenwood SP430 speakers

I must note that since I live in an apartment and expect to operate at home, big antennas are not an option for me. I want a shack that offers good performance, compact size, minimal interference, and all-band capability (40 m to 10 m, including WARC bands).

I am compiling a shopping list for the HF side of my shack. I want to know what I should shop for at the upcoming hamfest (Berryville, VA on August 6th, where I will take the General exam as well).

Some questions:
1. What exactly do I need? I understand I need to acquire a microphone, straight key (for my early days on CW), electronic keyer (for CW after I can copy and receive 15-20+ wpm), antenna tuner, low-pass filter, SSB filter, CW filter, and antenna.
2. Should I buy MFJ products? I have heard people say that MFJ products tend to be of lower quality.
3. Is the Bugcatcher my best option for an antenna? From what I have heard, the Bugcatcher is the best mobile HF antenna for performance, Hamsticks are cheap but offer poor performance, and Outbackers are built for ruggedness rather than performance.
4. How do the various types of Bugcatchers (I think there is a Texas Bugcatcher and Carolina Bugcatcher) differ from each other?
5. Can I cheaply and SIMPLY homebrew an effective apartment HF antenna that is as good as any apartment HF antenna on the market? My tool set is very minimal (little more than screwdrivers and socket wrenches), and I don't want to buy a soldering iron.
6. Are there better options than a Bugcatcher? It seems to offer the most bang for the buck for multiple band operation.
7. Any opinions on the Tape-Tenna I have seen advertised in QST?

My apologies. My memory of the 207R must be a bit 'fuzzier' than I thought. Other HTs of that vintage did not provide tone capability and I did not remember the 207R having such an option. In any case you appear to have good information. You may able to find the tone board by checking the used equipment lists from various dealers.

Source record: 75476

KENWOOD TH-D7A DUAL BAND TRANSCEIVER - BRAND NEW!!! Only two months old. Looks and operates like the day it came out of the box. This is not only a dual band transceiver but it also has a built in TNC which conforms to the AX.25 protocol. Just add a portable computer or laptop and you have an instant Packet station. Will also directly connect to your GPS Receiver for an APRS station. This unit is capable of receiving packet data on one band and audio on the other. 200 memory channels, each one can be named up to 8 ASCII characters. Large LCD readout makes reading it very easy, also has backlight. Receives out of band on both bands. You can view this rig for more info on the Kenwood website. The unit comes with the original box, AC charger, antenna, new battery, belt clip, warranty papers (never filled out), 2 manuals (one in english the other in foreign languages). With the supplied battery (PB-39) the unit puts out Approx 5 watts on both bands. This belonged to a non smoker! Now the fine print. Seller reserves the right to refuse any offers made by an eBay customer with excessive negative feedback. Buyer will pay $5.00 for shipping via USPS Priority Mail. Seller will pay any shipping charges over the $5.00, if necessary. Sells only to US customers. If you pay with a money order I will ship the unit out the next business day. If you pay by personal check I will hold unit for 10 business days (at sellers dicretion). GOOD luck and start bidding - Check my feedback - you won't be disappointed.

Here is a piece of early broadcasting and ,recording history up for
auction. Prior to the introduction of tape recordings in the
early 50's. radio stations and studios cut their own records,
know as soft cuts. A diamond cutting head was used on a lathe, the
depth of the cut monitored, and the number of lines per inch
selected by the operator. This here ,the unit of choice was a RCA
Type 70-D Cutting Lathe and turntable Model MI-11801-B, serial
number 1586. This lathe is a one owner lathe from one of
Canada's oldest radio stations , and is in very good condition.
Considered very rare, this is your chance to own a piece of
broadcasting history, with a low reserve. Anything with the logo
RCA is continuing to increase in value, especially the very
rare items, and you can bank on this vintage collectable as
well!!
The unit's are not as heavy as you may think, so shipping
shouldn't be too much of an issue. If you have any questions,
please feel free to contact me before you bid. Happy Bidding
See and bid at

I am selling my FT-757. Has 160-10 meters, all mode including FM/AM, built
in keyer, 600Hz CW filter, comes with Heil Cartridge inside original mic.
Been mobile, front looks okay, sides worn.
Updated with the new switching diodes (a real problem with the 757) about
a year ago. Works perfect.

This is not a club un "danger." Being in "danger" would mean an outside threat or improper governmental ruling that would negatively affect the club's operations...

You have a club whose governing body made a decision. As an "officer rep" for "2.5 years," you should have seen this decision coming. Or, your membership elected a bunch of loons as board members. Whatever ... you sound completely out of control, and it appears as if you didn't perform your "officer rep" duties the past 2+ years very well.

> ...assist me in saving the amateur radio club at USNA.

Sounds like the club needs disbanding. Get some fresh folks in there. And submit your resignation immediately - you are obviously too busy to stay in contact with its daily affairs.

3006. FS: Heathkit HW5400 HF Txvr w/matching Power Supply

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-16 00:00:00 UTC
From: fireman604@aol.com
Message-ID: <20000716124606.04451.00000014@ng-fm1.aol.com>
Source record: 75485

I moved to an apartment and can't use a full power tranceiver, so I am selling my Heathkit HW5400 with matching HWA5400-1 power supply. I bought them used and assembled about 2 months ago...both are in excellent shape, work great. I have wired a hand microphone to the radio, which I will include. Radio is 100W output on 80-10M SSB/CW, power supply is operated by turning on radio, so it won't work with any other...power supply has built in 24 hour clock...I have the assembly manual for the radio, but none of the other manuals.Selling both together as a package for $400 OBO. I can be contacted at my e-mail address, please don't respond to the newsgroup as I don't check that every day...my e-mail address is fireman604@aol.com I will include UPS shipping.

Peter,
Thank you for your inquiry.

This particular upgrade is for the DSP-599zx only, because the DSP-59Y does not have the external connections necessary for some of the new features. We have not ruled out the possibility of some sort of partial upgrade for the DSP-59Y at a future date.

I have a friend that used Sherwin-Williams "KRYLON" # 3502 Hunter Green
Satin.

When I saw the 735 I first thought he had obtained a new cabinet! He
then told me that he had sprayed the thing with the "KRYLON" spray
paint. It was less than $2.00 US for the can.

I am just getting a new Icom IC-2800H installed in my vehicle. I would eventually like to have it hooked up to a GPS receiver & display a map on the 2800's screen.. Has anyone done this already and/or what GPS manufacturer & model do you suggest. ? Any other hints or tips about hooking up a GPS to the 2800 would be appreciated.. The EAA air show is coming up fast (7/26 - 8/1) and there are lots of good deals on GPS units at the airshow if one knows which one he wants.. Tnx

The Waco event also symbolized something about the
present state of the Constitution: instead of the
balance of power, we live under a de facto executive
dictatorship. The White House never felt the need to
ask permission of the Congress before it undertook
the raid, and the Congress never raised a serious
challenge to the White Houseï¿½s assertion of complete
sovereignty. Our elected representatives provided the

illusion of participatory government, while Reno and various anonymous and unelected underlings held the reins of government in reality.

I will go with the" LETS SUE THEM"

I also have had CRAPPY service with UPS. If any one wants to see my pics. of a duplexer that I received around the first of the year, let me know. It came in THREE pieces. It was a DB Products, 4 cans, in a heavy metal cabinet. Can you believe they tore it up !!! Left it on my doorstep while I was away. Did not even leave a note as to whom to contact for damages.

I just went by Fed Ex this morning, and to my surprise, they are now shipping GROUND. They were cheaper than UPS and I have have NEVER had a problem with them.

Owen,

FedEx purchased RPS (Roadway Parcel (or Package?) Service to gain a foothold in the ground shipping market. It is now known as FedEx Ground.

Also, you may want to give USPS Priority Mail a try. I've shipped a number of transceivers by this method with excellent delivery times and no damage!

I have a question and for all of your Motorola Fans. Will a VHF Micor be able to accept Alphanumeric paging information and transmit it without errors? I have been told that although it is direct fm modulation in the transmitter exciter, it might not be able to handle the Alphanumeric information. Is there any modification that can be done to correct the problem, if there is a problem? Please reply via email. Thanks Don Smith KB6GQA

My experience is tht they aren't as sturdy as the Svetlana 572's, but if you are going to use them for replacements for 811's then I think they should do just fine. They will never be taxed to produce to their limits.

Message-ID: <8l03fe$rp5$1@bob.news.rcn.net>
Source record: 75364
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

Hi all, I have two Motorola NMF6050C Public Safety style speaker-mikes for sale. The connector fits the side port of a MX series Motorola HT.
They have the standard MX thread ANTENNA SOCKET on top of the mike, and a two position TOGGLE SWITCH on the bottom next to the cord, which is about 2 ft. 3in. long, spring reinforced at mike and connector, and is NOT COILED.
The mikes have a ratchet rotatable clip on the reverse side, commonly seen clipped to a policeman's shirt epaulet to get the antenna up away from the body.
One mike has a mini phone jack on the right side (earphone ?)

The pair are in good physical (easy 8 out of 10,) and perfect mechanical condition, with all parts intact and working. I do not have a working MX series radio to test them, so are sold as is.

Only $10 each shipped priority mail!!!! $15 for the both of them!!!!!

Thanks for looking......Joe

By adding many program shortcuts, my Desktop has become very crowded! Under Windows 3.X I could assign an Icon (like Photography) a name and drag other Icons to it. That way I could click on a single Icon and have access to many shortcuts under the same heading. Is that possible under Windows 98 SE??

3038. icom ic-02 (E or another version) mic&sp jacks

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-17 00:00:00 UTC
From: Marco Campaioli <marco.campaioli@tin.it>
Message-ID: <3973788A.F2473ED1@tin.it>
Source record: 75367

who know electric contact of an ic-02 icom trx?
Only i know that 3.5mm jack is external mono speaker connector (good for headset, baut it's not important - i must connect it to e Soundblaster) and 2.5mm jack is a 'pseudo' external mic input. I think 2.5mm is a mic input in external part of a male jack, and internal part is a PTT contact. Isn't true?
Please help me, I would connect ic-02 (E version) to a packet node via SBlaster....
Thanks in advance.
Marco

NB: if you like answer me to marco.camp@iol.it.

3039. Help with Ham reciever

Hey guys...I need your expert help.

I'm looking for a portable HAM bands reciever. It could have more than just the ham bands, thats Ok, but I'm primraily interested in just the Ham bands.

It has to be portable so I can take it to the beach, and I would rather not spend a fortune.

What can you guys suggest? Is there a chinese or Japanese sort of knock-off that gives decent performance?

Any help would be appreciated. Please email me directly at mikey1@pipeline.com

I thank you very very much. Hams are the greatest people on earth, in my opinion.

Mike

3040. Re: Newbie questions re: Yaesu FT-207R

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-17 00:00:00 UTC
From: David Rich <kgous@swbell.net>
Message-ID: <3973CF76.EC52982A@swbell.net>
Source record: 75369

Hello Chuck,

I have a FT-207R that I bought new back around 1979. I since have bought a FT-530 and FT-51R but keep the FT207R around for standby operation. The FT207R does run the batteries down quickly if you use the memories. I have found that the batteries last a very long time if I keep the top rotary switch in the BU OFF position when not in use. This effectively turns off and erases the memories. When I use it I hand type in the frequency using the touch pad and rotate the top rotary switch to the appropriate +/-600 offset. I then need to remember to turn it back to the BU OFF position when I am done using it or the battery will run down quickly. This may be a hassle for some but it is no big deal to me and it really saves on the battery. I also try to use the DISP OFF switch below the touch pad to turn off the display when ever possible.

I do not know if it would be worth the $50 bucks or so to replace the battery if it ever went bad. I am not sure I would invest $30 or so for a after market tone board either. As the other gentlemen said, that money could be used to buy a much newer and nicer HT.

Good Luck
Dave Rich

Will all new shipments of DSP-599zx's also have this upgrade?

Thanks,
Bill Crocker

Hello Bill,

Yes, we will send all of the dealers new eproms for the stock currently on the shelves. Any new units shipped will have the upgrade installed.

NOTE: Any DSP-5999zx sold 1/1/200 and later can apply for a free upgrade to the 5.1 upgrade just announced. We need a copy of the receipt and the serial number of the unit. For those who want to check their current revision and serial number, do the following:

1) SHIFT + MODE
2) SHIFT + MODE (Unit now shows SETUP mode (and light))
3) Turn left knob to "About"
4) Depress left knob and read serial number and current firmware revision level.

I have two corrections to the above (Hit SEND button instead of SPELL CHECK)
sri

1) The upgrade level is 5.0, not 5.1

2) The qualifying date for free upgrades is 1/1/2000 NOT 1/1/200. (If you have
one purchased in the year 200, Please contact me as soon as possible).

Any questions, see the web site <http://www.timewave.com> for the latest news
and the manual supplement, which will appear shortly.

Mr. (and I use the term loosely) Weir ,
Just how much time have YOU spent in the service of your country? And never mind the MARS service, I'm talking about putting on a uniform and living the job 24 hours a day, 7 days a week, 365 days a year. Laying YOUR life on the line for a lot less money than a bus driver makes in the civilian world. A man who has made Captain in the U.S. Navy, is carrier-qualified, and is a military test pilot is a MAN who deserves a lot of respect. The crack about "more stupidity stripes than good sense" says more about you than it does Capt. Donovon. As for the misspelling of your name, I take it you've never made any mistakes?? Move over, Jesus! You complain about the misposting in an equipment forum, I (and many others, I imagine), saw it as an effort to reach the widest possible number of hams who could possibly help. If you didn't want to help, you could have just disregarded the post, rather than stoop to flaming. And as strange as this may seem to you, typing is not a requirement to fly an F-14 in combat, just for chairwarmers in offices.

You complain about two misspellings, yet you were unable to get the original poster's rank correct. Didn't they teach you reading comprehension at that school you went to? Damn, but your parents wasted a lot of money on you.

> Commercial, Instrument, CFI, and probably more hours than you've got at the
> Oclub bar. Yeah, you've apparently been spending more time at the bars than the Captain has. But I doubt your flight credentials are better than his.

I don't normally stoop to the same low level on these newsgroups as people like you, but your (apparently) normal behavior brought out the worst in me. My apologies to all the sane, decent hams out there.

Mark K5MAR
No fancy initials, I don't have to prove anything
Proud to say my father was a Lt. Commander in the U.S.N.R. during W.W.II
(Squadron Commander, commercial multi-engine, instrument and C.F.I., carrier-qualified, advanced combat instructor)

P.S. I've seen more fools teaching college than I've seen flying combat fighters.

Dave;

Eight (8') feet "Oversize Length" is max for UPS, so 10 ft.
tower sections ship expensive truck freight.
I suggest an inquiry on your local packet network.
In the Charlotte, NC metro area, used 25G is $40. per stick in
good condition, on the ground.

Check around for a GOOD TV parts supplier or a TV antenna installation company in the more rual areas, i.e. 50-100 miles from NY or Philly area.

Also, I will be ever flamed, watch Yahoo and E-Bay auctions. I see towers in there on a regualr basis. NJ/NY is not too uncommon.

Chuck,

Having owned a '207 years ago, I have some advice for you. Dump the '207 and get yourself another radio. The '207 is ancient technology, a real battery eater by today's standards, and is probably unrepairable if it breaks. Depending on what you need, you can buy a brand new 2m HT (or even a 2m/440 dual band HT) for under $200 and come away with more features, better battery life, smaller/lighter foot print, more power output, and built-in tone.

Put whatever money you're willing to spend on the '207 accessories (if you can find any) toward a new radio, or a later model used one. You'll be a lot happier in the long run.

73, Jim

Hey, in it's day, it was a 'brute force' quality unit. I've had over
the years a 500, 500c, 500cx,and 700cx. I still have a 500c
out in the garage with external VFO and the semi-breakin CW
or vox module, and the DC settup with the chopper on the
extra power supply brick.

Great unit in it's day. But it's day is long gone.

However, if you want 'more power', they can still hold their own.
On 40m, my 500c would actually out 400+ watts into a cantenna.

A friend picked up a Kenwood TS-820. Now, part of it may be
he didn't know how to use the thing, but I swear my Swan could
hear stuff he had no hope of hearing, and he'd have interference
issues with stuff I'd have to move the dial to even know there was
something else nearby.

As a first radio? Kind of difficult to operate, but not bad....

Mike

Is anybody aware of an online feature comparison "grid" (or the like)
for all (many, most, some) current HTs from the major vendors?

I picked up my 20 year old ICOM IC-2A last night and decided that it's
REALLY time to get something new.

Before I spend hours visiting all the manufacturer's Web sites trying
to figure out what all their radios do, I thought maybe somebody has
done some of the work for me.

Mr Weir,

I truly hope your comment about spending more time in O'Clubs than my flight hours was a poor attempt at humor as I spend very little time in O'Clubs. You may be correct about flight hours as I know many CFI's who rack up incredible flight time who couldn't last 5 minutes in the environment I fly in. 90% of my logged hours are in tactical, multi engine jets, with over 800 landings on aircraft carriers and in cutting edge test aircraft such as the YF17, YF22, several only described as "testbeds". The other 20% (about 2000 hrs) are in small planes like C180' s, Beechcraft, T28's.... .

If you were ever military, then you know the problems Lt. Johnson faces and how they could come to be without his knowledge until after the fact. To educate you a little further, most decisions that effect the active duty military personnel come from civilians, who dictate what is to be cut and what is to be saved. I have had several tours in DC and can say this with confidence. Most of my time has been spent defending this country to provide a safe and free environment like the one you live in so people like you can share your opinions with anyone anytime.

I was using the internet before it was the WWW and did so in the days when you had to have some computer expertise to do so. BTW, You may want to complain to Microsoft too as their spell checker indicates your name is spelled incorrectly.

BTW MSSE is Masters of Science in Systems Engineering.

To the readers of this Newsgroup, I offer my appologies as this is off subject. Mr. Weir, if you would like to discuss this any further, please do so via email.

Jake Donovan
Capt USN

Spend your time and efforts helping and aiding rather than finding fault with anything you can. It will make yours and everyone's life around you richer.

Good advice, but

1) it cost me $10, plus the btty.
2) just bought a mobile, don't have $$$ left.

I'll upgrade later, for now I have a portable that
works if I need one. And I can always use it as
a 'project'...if it breaks I'm not out much.

Hello. I was wondering if any of you have used the Taylor (Chineese) 572B's in your amp and if so what do you think of them. I will be placing them in a Ameritron 811H. My 811's (USSR) are over 5 years old and still good, just looking for a more rugged tube than the 811.

3069. ft-920 fan noise

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-18 00:00:00 UTC
From: Bill East <beast@pcs.mb.ca>
Message-ID: <PI9d5.6176$Rz1.51023@news1.mts.net>
Source record: 75197

two questions for this group....

what`s the correct operation for the fan on the ft-920.?

My fan runs each time you transmit no matter what power setting is
selected..... 10/50/100watts.
Or should it run ONLY when the sensor says to run to cool the PA.

Have been trying to set both SSB and FM output power levels the
same on the Ft-920, can this be done ?
What I want is 10-12 watts on SSB voice peaks and key down on FM
about the same power too..
If I set the menu to 50 watts and back off the RF output control
for 12 watts the FM side is a whopping 40 watts. Not too good for
10 -14 watt brick amp.
Got any ideas , or did I miss something in the owners manual.

thanks,
Bill

i don't know of that sound card but if you have the driver for it just
go under control panel, add new hardware,click next,next again, then it
will ask you install from list below,click no then next, then windows
will ask you if you would like windows to fine it click no then next
the next window you will see look for the hardware you are trying to
install which is the soundcard click it or "if you are trying to
install a modem" and windows will bring up a data base when this come
up click hard disk if you have the driver on a 3 1/2 disk this will
take you to the 3 1/2 disk just click the driver you need it should
install the driver at this point. first i would let windows try to
install it. windows program will config the driver if you are not sure
on how to do this fine someone who know about install driver or config
them they will know what to do .

What about tips? For example, I see radios with one band and radios with dual. Is the 440 area a band I'll be interested in anytime soon? I've heard it's pretty elitist/closed. What about little features like full duplex, power selections, max power, etc? Not having operated these things, I just don't know what's worth paying extra for.

I already own a BC-245 scanner and use it regularly to receive VHF wherever I am. So as far as actual QSO's, I think I'd like a mobile rig to start with. Several hams in my club seemed to think an HT was a better starting point. Thoughts?

With apologies to Tom K4IIJ, the following email response I got from my original post contained way too much great information on this subject to not be shared.
==========
On Fri, 14 Jul 2000 00:50:57 -0700, you wrote in rec.radio.amateur.equipment:

>What would be a good mobile transceiver for a newbie, not too expensive, >maybe a couple or three hundred. Secondhand/eBay is fine. Any suggestions >and tips are very much appreciated!

Gee, that's a question with NO globally correct answers. What follows is MY experiences and are completely subjective.

First, I have had fantastic experience with both ebay and purchases from the newsgroups. I started looking in earnest at ebay since I was away from the hobby for 12 years [career, family, other interests] and have bought

Yaesu FT-726R
Yaesu FT-736R
Yaesu FT-920
Yaesu FP-1023, SP-8 & B&W LP filter
Yaesu Md100AX8 desk mic
Comet GP-15 6/2/440 vertical
Cushcraft R7000 vertical
Vibroplex keyer
Heil Micro-Pro boomset
Yaesu Md100AX8 desk mic
plus some small items

I continue to wait to get stung but thus far I have saved a LOT of $ and received the purchases in the conditions stated. Plus I have made some new friends. For the "nay sayers", you are more likely, IMNSHO, to get burnt at a ham fest flea market than on ebay or the newsgroups. Only negative was UPS delivering a high $ purchase to my neighbor's garage!

Her's a URL to check used prices

http://pages.prodigy.net/classic48/usedham.htm

Here's a great site to see what the rigs look like

http://www.qsl.net/sm7vhs/radio/

There will come a time when you may want to move up from VHF to HF. With the new licensing guides and the 5wpm Morse code requirement, there's a lot new activity in the digital modes and its taking place on HF <http://www.westmountainradio.com/>. Having said all that, your decision will be whether you want to invest in a strictly VHF/UHF mobile rig [which can be moved back & forth to the house], VHF/UHF handheld which can be mounted in the car/truck/space shuttle/whatever, or a combination HF/VHF/UHF transceiver which can go between with house/mobile adaptability.

Having droned on with all that, I would recommend a dual-band rig [very little difference in $] with mobile & home adaptability with the most features [adjustable power output, automatic power management, built-in CTCSS decoder/encoder, yada,yada,yada].

Since I am a loyal Yaesu <www.yaesu.com> fan, I tend to lean in that direction. However, if you are looking for the "biggest bang for the buck", I have to recommend the Kenwood <http://www.kenwood.net/> TH-D7A. I have this one, bought new. The neat features about this handheld is

1. has a built-in TNC so you can hook it up to your PC/laptop for packet. Info on packet is available at http://www.packetradio.com/

2. has a port to hook up a GPS so you can get on APRS with minimal headache. With the appropriate APRS software, you can do real-time tracking of your own mobile as well as other hams! I monitor other ham APRS stations on my Garmin GPS III+ screen. If there is an "I-Gate" station retransmitting your packets to the internet, your position can be monitored on the internet! Did I mention sending a short email via APRS to the internet?

3. with the programming software, you can change frequencies via the PC and save that particular set for repeat use. For example, I have a group of repeater frequencies I download from the PC to the -D7A when we make out "every 2 month" run down I-95 to Orlando. Sure beats having to manually input each time.

The -D7A has been upgraded to the (G) model for around $60 [haven't sent mine in yet]. The new (G) model is on the shelves. The sale of used -D7A's has been minimal since no one is ready to turn loose of a truly unique rig yet. If time is NOT of the essence, you could monitor ebay and bid accordingly. I did that with my FT-920 and got it for about $200 less than I had bid & lost on other bids. Patience wins.

My second choice is the Yaesu FT-8100R. I have mine remoted in the car and will soon install the cabling to use it in our Yukon XL. Downside on this rig is that you have to purchase the CTCSS encoder board separately [decoder built in]. However, used models will probably have the encoder since its a "must have" since a majority [my encounters] have tone access requirements. Doing a quick search of TravelPlus for Repeaters v.4a <www.arrl.org>, the following repeaters appear to be within 20 miles of Diamond Bar [note the CTCSS requirements]:

If you find a particular model that you are interested in, the ARRL Member site has product reviews. If you are not a member, I'll be glad to forward the reviews as Adobe .pdf file attachments. My other recommendation in the "homework" department is to check out

www.egroups.com for listservs pertaining to the radios in which you're interested. You can scope out the archives and might find some information that will either convince you of the rig's positive worth or send you running for the hills to avoid it.

Now to your original question with some caveats:

There is no such thing as an "inexpensive" ham radio. There is the antenna, cabling, power supplies or 12vdc adapters, mounting brackets or desks, headphone/mic configurations, memberships [since you're using someone's repeater], and the spending goes on.

There is no "be all, do all" transceivers. If there were, I wouldn't have so darn many.

Involving the wife in your hobby can have positive and negative results. She'll either not be interested and wonder what the fascination is that holds your interest and spare time/money. She'll be interested and you'll get the used radio and she'll have the mondo gosso state-of-the-art rig.

For more information on APRS, check out the following sites
http://www.aprs.net/
http://www.webring.org/cgi-bin/webring?ring=aprs;list
http://joe.mehaffey.com/
http://www.radiohound.com/2000upgrade.htm

Good luck with your search. If you have other questions, I'll be glad to help.

Source record: 75203

I have a question for all of you who are running the FT-100 with ATAS-100 mobile. Can you think of any reason why I would be able to get the antenna to tune up and work beautifully on 40, 20, 17, and 15 meters, but can't get it to work worth a darn on 10 or 6 meters? I have the antenna mounted directly to the bed of my truck near the tailgate on the top of the sidewall. Thanks for any help you might be able to give!

Hi Mike,

Contact Yaesu via email at amateurtech@yaesuusa.com or give them a
call at (562) 404-2700 (tech dept).

They'll be able to tell you what may be wrong and how long a repair will
take...

Best of luck,

John

Body handling: Binary attachment payload not displayed: helper.vcf

Dear Specialist

I have a important question about recevice the satellite imagery and

weather chart by wireless method, I need to looking for the wireless

Radio have All-In-One function, that mean is Transmit HF/VHF/UHF

frequency Include (SSB Morse Code Transmition) and Recevice the All

band even NOAA Satellite Imagery ,I found that NOAA Satellite normally

transmit - SSB Band with Frequency between 137-138MHz .

Finally , I found the Yaesu HF/50/144/430 ALL MODE TRANSCEIVER

(Satellite Version), the Specificationas show as below...

http://radioinfo.co.nz/ft847/ft847spe.htm

http://www.macawelectronics.com/yaesu/ft847.html

I GUESS this model can coverage the satellite signal,but I have some

question still....

1. Does it(Yaseu) suitable for Recevice Satellite Imagery from NOAA?

2. Can I use the Qualifilar Helix Antenna and Yaseu to recevice

Satellite Imagery ?

3. Also,Do I need more Accessories except Antenna and Recevice ?

Please Help and Suggest.

Thanks very much.

Hey Guys,
I've been pretty much inactive for a while now, but am looking and cranking it up again. I'm looking at getting new equipment, etc. What are your thoughts on who (i.e. Kenwood, Yaesu, icom, ...) make the best equipment -- HF primarily -- and you experiences with them and which manufacturer or rig is the best bang for the buck! I know that's kind of an open questions, but any input would be helpful!

Thanks,
KAC

>without errors? I have been told that although it is direct fm
>modulation in the transmitter exciter, it might not be able to handle
>the Alphanumeric information. Is there any modification that can be
>done to correct the problem, if there is a problem? Please reply via

standard POCSAG speeds are 512, 1200 and 2400 baud; FLEX speeds start at 1600,
and theoretically go up to 9600, although only 6400 has been reached.

Issues are overshoot, risetimes, waveform, etc.
Stick to 512, and you might be OK. Pager has to be 512 capable (internal
design).
Most 1200 pagers also do 2400 (programming issue)

FLEX pagers adjust to whatever speed is sent out.

Just out of curiosity, why do you want to replace the ADI AT-600? I have
their 2-meter AT-201 and am very pleased with it. I had thought the 600
was an excellent value, and it seems to meet all of your stated criteria
for your desired new HT. If there are problems with the AT-600 Ishould
hedge my recommendation of it to friends.

Dave,
I can't give you a specific brand name, but a number of years ago
there were a few 'controlers' advertised in QST for remote control
via a 220 or 440 link. At one time there were a number of hams using
440 handy talkies to control their HF radios. If nothing else, you
might rumage through some old QST's for the ads. As I recall, doing
this was never simple, and never really 'cheap', but it did work.
You still hear them using these 'links' occasionally.
'Doc

Source record: 75326

For those interested.....
Radio Shack will be soon offering a new 2M mobile. Currently sold in Europe as the Dragon SY-540, it will be re-labled for radioshack & it is a slim 25W unit with 10 memories + 1 call channel & ctcss. It is made by the same company in the orient (Dragon) that makes the HTX-10 10M mobile , as well as similar Titan, Magnum & Roadforce mobiles. They also make the 10M Titan/Eagle all mode handheld & base unit, as well as CB equipment. The new 2M mobile is built in the same "shell case" as the Cherokee CM-5 small CB, so if anyone can pull a picture off the web of a CM-5 you are pretty much looking at the new mobile.....

Where to get 2nd hand prices?

I am trying to sell some old radio gear and looking for some prices. Does any one know of a web page which sells this sort of gear?

The gear I am trying to sell is:
Yaesu FRG-8800
AOR AR-8000 scanner

Many thanks
Brendon

There was an article in QST a few years ago about this very thing. As I recall, the op had a station in CT which he could operate from NYC. I took a look through a few years' indices, but I didn't find it. Maybe a request to tech support at ARRL would get you some info.

Good Luck. 73, CJ K0CJ

FS:
Yaesu FRG-100 receiver with KP-100 keypad and PA-11B AC adapter. Receiver is like new condition with no defects at
all. Not even the slightest scratch on this receiver. The original box is also in excellent condition. The French
made KP-100 keypad is also in like new condition and allows direct frequency entry into the receiver. The manual is
also included. It receives from 50 Khz - 30 Mhz. USB, LSB, CW, AM, Clock, 52 memories. The FRG-100 has the CAT
System if you want to control the radio via your PC's serial port (cable and ScanCat Gold for Windows software
included).

Used very little by a non-smoker. Bought a transceiver with a general coverage receiver, so now this radio
isn't really needed.

$425.00 shipped to the 48 states, or a bit less for local pick-up.

Money Order or Cashier Check Only

Take a close look at the IC W32, really nice unit. I have worn the ink off the buttons on 2 faceplates already (3yrs) however. The radio is fantastic, if the price is right. The AT-600 series is a good value for the price also. No Experience with that Alinco.

Glenn,
Your music will always be with us but I thought you perished on Dec.15,1944? Glad to see you're still here.

You know what the public doesn't know about you that I do because I've been a fan of yours since I was 10 years old; that was in 1948? And by the way I was raised in Passaic, New Jersey and your very last stateside concert was in the Capitol Theater on Central Avenue, Passaic, Sept.28, 1942.

People don't realize that you failed Freshman music composition at the University of Colorado. And what did you have to do to be re-instated the next Fall? Compose something that would grab the fancy of the directors of the School of Music.

What you composed not only got you re-instated, was phenomenal but also will be around as long as pop music itself. In fact it became your signature tune. "Moonlight Serenade." Damn, you're a genius Mr. Miller.

I found out lot about you for two reasons. I have read several biographies and even corresponded with David MacKay who used to be the executor of your estate. Secondly a distant, now deceased cousin of mine, Wilbur Schwartz, told me much when we met in 1982. You remember Wil, don't you? He played sax in your Stateside orchestra, right next to Tex Beneke and worked with Jerry Gray in arranging one of your masterpieces and the biggest selling instrumental in the history of American music-"In the Mood." You gave cousin Wilbur a big mention in the movie "The Glenn Miller Story" with Jimmy Stewart as you. In fact you credited Wil for giving you that special unique mellow sound for which you were searching for decades.

Glenn Miller-you're in a league of your own.
Doc,AF2Y

3124. FA:Vintage RCA Record Lathe & Turntable

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-18 00:00:00 UTC
From: Ken <gold@nucleus.com>
Message-ID: <3975276A.D9B87F1B@nucleus.com>
Source record: 75345

Here is a piece of early broadcasting and ,recording history up for
auction. Prior to the introduction of tape recordings in the
early 50's. radio stations and studios cut their own records,
know as soft cuts. A diamond cutting head was used on a lathe, the
depth of the cut monitored, and the number of lines per inch
selected by the operator. This here ,the unit of choice was a RCA
Type 70-D Cutting Lathe and turntable Model MI-11801-B, serial
number 1586. This lathe is a one owner lathe from one of
Canada's oldest radio stations , and is in very good condition.
Considered very rare, this is your chance to own a piece of
broadcasting history, with a low reserve. Anything with the logo
RCA is continuing to increase in value, especially the very
rare items, and you can bank on this vintage collectable as
well!!
The unit's are not as heavy as you may think, so shipping
shouldn't be too much of an issue. If you have any questions,
please feel free to contact me before you bid. Happy Bidding
See and bid at
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=381259133

To the original poster:

Of course... The appropriate solution to any problem is to sue the other party.

What I don't see here is (1) was restitution or an offer thereto made by UPS, (2) was any *CIVIL* (behaviorally speaking, not legally speaking) attempt made to recover damages from UPS or (3) was the shipper asked to or willing to make good (i.e., assume responsibility for inadequate packaging and so on).

Presumeably the "Let's" part is your feeble effort to get us to kick in $$ on a class-action.

Not today, thanks. The dork-o-meter's needle pegs at 10+ when we point it towards you.

From: JL Marcel Simard <marcelsim@sympatico.ca>
Message-ID: <3973CB12.CA0FE76E@sympatico.ca>
Source record: 75386

Someone could teach me how to settle this transmitter to be able to transmit all over the bands - not just amateur bands as supplied by manufacturer.
I hope it is not done by software! It may be just a question to cut some diodes or remove some jumpers.

tnx

Marcel VE2ALL

3141. Screwdriver antenna plans

I know this probably been beat to death on these pages in the past but I am looking for a good set of plans for the screwdriver antenna. After all of these years I am tired of VHF and want to put a HF mobile in the van. I have looked at the Hustler and Comet antennas and was wondering if the screwdriver antenna was any better.

Thanks for putting up with the post 1 more time and 73's

CQ CQ CQ de K6LDO

Does ANYONE have or know someone who has succesfully (or knows how) to set up an HF station, antennas, etc. at one location (in a home at high elevation)... and then control it via computer from an RF Hole?

I moved into the worst possible "pit" (canyon) in Los Angeles, and I have absolutely no way to set up my HF antennas in such a manner that I can communicate any distance.

I have a 1700 foot location available to me (at a friend's home), however I need to figure a way to set up computer software to control the radio at my friends house, and then have a reliable way to connect my computer with his so that I can control the rig from the "RF Gulch". Also, very important to me is the ability to send CW through some sort of module in my Home computer to the remote Transceiver's computer.

Any realistic solutions would be deeply appreciated.

If you can help, please send me with your e-mail address, and I will send you a toll free number to reach me at so I can hear your ideas.

Thank you es 73 de Dave K6LDO

I am also interested in this topic, since I live in the SF bay area
and have a station in the CA central valley. W6RJ told me he
controls his mountaintop station using PC anywhere and a PC
at the remote, using a phone line modem connection. But he
uses UHF FM for the audio link. There was also an article about
4 years ago in QST about a station in Alameda, CA controlled
like this.

I talked to Kachina about their remote control boxes and you
can control either their transceivers or with their remote boxes.
The remote boxes use one phone line for both control and
audio. The audio is digitized and uses 90% of the bits, while
the remained 10% of the bits are used for control. It utilizes
up to 38K of modem connect speed. If you can only connect
at 28.8 like I can, then you get poorer quality audio. If
you buy a Kachina transceiver, then the whole system is turnkey.
For anything else, you have a project!

I have brainstormed this and come up with the following
untested concept: Use a burst modem to send commands
from the control point to the radio over a phone line. At the
same time, use the reverse direction of the phone line to
hear received audio. (Do not digitize the audio, just use
the line as an analog line). To transmit, send analog audio
with a 3 kHz tone superimposed on it. The 3 kHz tone
activates PTT. A notch filter at the transmitter removes
the 3 kHz tone. While transmitting, the reverse path can be
used to send telemetry related to transmitter status, such
as SWR or ALC, etc. The only thing this scheme doesn't
address is S-meter readings. The advantage of this
setup is that you can full analog phone line quality receive
and transmit audio (less a notch at 3 kHz) and only one
phone line is needed. Since the burst modem would operate
at 9600 baud or less, even the junkiest phone line would
be OK.

If anyone has any further thoughts, I would love to hear them.

3146. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8l1287hdd1@news.hawaii.edu>
Source record: 75392
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Dear friends,
finally I managed to get my partly functioning VX-5 over to US. (I am from E
urope)

Though I would like you very much to advise me on the
procedure of warranty repairs.
1.Where to send ? (who pays for sending: me or Yaesu ?)
2.How long it will take to repair the rig ? (+/-)
3.Who pays the costs of sending the radio back ? (conus)
4. What document are required to accompany the radio ?

The problem with my radio is that it shows on S-meter only
to values 0 or 9.

Many thanks,
Mike

I have a 3 position coax switch (remote control) requiring 115vac
to operate. I have no idea how to operate it.

The label on the unit is:
R.F. COAX SWITCH
Model No. 3N120RC1 Type 1P3T
MFG No. 2903-50 Ser. No. 236--
115 VOLTS A.C. 60~ 1Ph.
GENERAL COMMUNICATIONS COMPANY
BOSTON MASS

It is about 4.5" long, with a cylindrical body about 2.25" dia.
From the side of the cylindrical body protrudes a 4 pin "Bendix"
connector (for switch control) and at the end of the cylinder are
4 'N' connectors, labeled 'IN', '1', '2', '3'.

It appears to be motor driven (the driving mechanism is in the
cylindrical body).

I have photos and a resistance table of the connector pins available
if needed. please email if i can answer any questions.

Can anyone help? email K3NCB@arrl.net

I have for sale my Yaesu FT-2500M two metre FM transceiver. It is in perfect condition. This rig is built to military specifications and is extremely rugged, well built and the controls are easy to use. Perfect for use in an SUV or pick-up trucks. Includes CTSS, DTMF, keypad mic, mobile mount, power cord and manual.

I am selling this radio only because I have lost interest in 2M FM. My price is USD $150 (or best offer) plus shipping. Please email me direct if interested. 73's

ADVANSPEC,

As an owner of the new RS 10 meter mobile, which I have had a blast with, I would like to dig up as much info on it as possible. Do you know of a website or mailing address for the company that is manufacturing these units? I would love to get more info than RS has available on the radio. It seems to have more potential than it presently displays.

Thanks
Jake

Short answer: Use a separate sound card, separate modem. Give the soundcard modem a decent Viking funeral, with extreme prejudice.

Long answer: Soundcard modems are also known as combo cards, and they are the devil. The modem section is inevitably a "winmodem," designed to tap the CPU to do the job of an actual modem. The result is a modest savings in the cost of hardware, and mediocre performance. Unfortunately they also require Micros~1 Windows to function. Penguinheads the world over are trying to write so-called "linmodem" drivers, but their task is made difficult by the reluctance of hardware manufacturers to release relevant specs, which would displease the beast from Redmond.

I've had limited success with the sound card function in combo cards under Linux. The early betas of Linux PSK31 programs such as gpsk worked okay on receive, but the general performance did not fill me with confidence.

Linux plays best with real modems and real sound cards. Most external modems work fine. Hardware-based ISA modems are pretty well-supported. When I surf under Linux, the same inexpensive ISA modem I'm using now gets the job done with no problems. Compatible PCI modems are more difficult to find, as most are winmodems. Here's a modem reference that may be of some help: http://www.o2.net/~gromitkc/winmodem.html. As for sound cards, most 16-bit SB compatible cards are detected and will work under Linux. Your Linux distribution's web site will have the latest info.

Make sure that you have a very good ground system, both at the radio as well as at the antenna. Don't count on the ground from the shield of the coax, run a separate ground wire from the chassis of the rig (one of the mounting bracket screws will do nicely) to a good common ground point (like the frame of the vehicle) and the ATAS should perform much better. Mine wouldn't tune 10 meters at all until I added the extra ground at the rig. Not only did this bring in 10 meters, but it tuned lower on all other bands as well.

(This is especially important if you are using the quick disconnect mounting bracket)

Looking at the list of groups this was posted to, he is probably not
talking about a telephone modem or winmodem, but about using a soundcard
(with software) as a modem for amateur radio digital modes.

While this principally has the same problems, the modem standards used on
amateur radio are much simpler than those used on the telephone line and
a modern PC CPU has no problem at all performing this function.

To answer the question: first read the relevant documentation. It is just
a list of steps to perform.

3172. Saturday Morning

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-19 00:00:00 UTC
From: Gene <"sop(NOSPAM)"@erols.com>
Message-ID: <3975E335.C85@erols.com>
Source record: 75225

This is a bit off topic and you may have seen it before, but it was new to me and I thought I'd share it with you.

The older I get, the more I enjoy Saturday mornings. Perhaps it's the quiet solitude that comes with being the first to rise, or maybe it's the unbounded joy of not having to be at work. Either way, the first few hours of a Saturday morning are most enjoyable.

A few weeks ago, I was shuffling toward the basement shack with a steaming cup of coffee in one hand and the morning paper in the other. What began as a typical Saturday morning turned into one of those lessons that life seems to hand you from time to time. Let me tell you about it.

I turned the dial up into the phone portion of the band on my ham radio in order to listen to a Saturday morning swap net. Along the way, I came across an older-sounding chap, with a tremendous signal and a golden voice. You know the kind, he sounded like he should be in the broadcasting business.

He was telling whoever he was talking with something about "a thousand marbles." I was intrigued and stopped to listen to what he had to say. "Well, Eddie, it sure sounds like you're busy with your job. I'm sure they pay you well but it's a shame you have to be away from home and your family so much.

Hard to believe a young fellow should have to work sixty or seventy hours a week to make ends meet. Too bad you missed your daughter's dance recital." He continued, "Let me tell you something Eddie, something that has helped me keep a good perspective on my own priorities."

And that's when he began to explain his theory of a "thousand marbles." "You see, I sat down one day and did a little arithmetic. The average person lives about seventy-five years. I know, some live more and some live less, but on average, folks live about seventy-five years."

"Now then, I multiplied 75 times 52 and I came up with 3900, which is the number of Saturdays that the average person has in their entire lifetime. Now stick with me Eddie, I'm getting to the important part." "It took me until I was fifty-five years old to think about all this in any detail," he went on, "and by that time I had lived through over twenty-eight hundred Saturdays. I got to thinking that if I lived to be seventy-five, I only had about a thousand of them left to enjoy." "So I went to a toy store and bought every single marble they had. I ended up having to visit three toy stores to roundup 1000 marbles. I took them

home and put them inside of a large, clear plastic container right here in the shack next to my gear. Every Saturday since then, I have taken one marble out and thrown it away."

"I found that by watching the marbles diminish, I focused more on the really important things in life. There is nothing like watching your time here on this earth run out to help get your priorities straight."
"Now let me tell you one last thing before I sign-off with you and take my friend out to dinner. This morning, I took the very last marble out of the container. I figure if I make it until next Saturday then I have been given a little extra time. And the one thing we can all use is a little more time."

"It was nice to meet you Eddie, I hope you spend more time with your family, and I hope to meet you again."

You could have heard a pin drop on the radio when this fellow signed off. I guess he gave us all a lot to think about. I had planned to work on the antenna that morning, and then I was going to meet up with a few hams to work on the next club newsletter. Instead, I went upstairs and woke my wife up with a kiss. "C'mon honey, I'm taking you and the kids to breakfast."

"What brought this on?" she asked with a smile. "Oh, nothing special, it's just been a long time since we spent a Saturday together with the kids. Hey, can we stop at a toy store while we're out? I need to buy some marbles."

I hope your next Saturday is a great one!

MFJ 949E Delux Versa Tuner II. This unit isn't "just like new", it is new! 6 months old. It works as advertised and works well! I was given a MINT linear amp and this tuner only can handle 300 watts. I need to upgrade. I am so impressed with this MFJ unit that I am upgrading to their MFJ-962C 1.5 KW Versa Tuner III. Specs on this tuner can be found at http://www.mfjenterprises.com/tuners/mfj949e.html Buyer pays shipping w/insurance. US Certified Funds or US Money Orders Only.

Shure Desktop Amplified Microphone model # 526T Almost new condition. In fact, I just replaced the Mic Crystal and went over the amp circuit with a fine tooth comb. This mic is wired for a 4 pin Yaesu radio. I have had great audio reports with this mic. I now longer have a use for this mic as I am trimming down gear that is gathering dust. This mic was last used with the Yaesu FT301 D that I currently have on eBay. Will work with any 4 pin mic input. Buyer pays shipping w/insurance. US Certified Funds or US Money Orders only.

Yaesu FT301D TRANSCEIVER 10 - 160 meters. LSB, USB, CW, AM, FSK. SSB - 200 Watts. CW 200 Watts. AM, FSK - 50 watts. This HF unit was recently returned from Yaesu USA. I sent it off to have it tuned up and aligned so I could put it up for auction. Radio is within all Factory Specs. GREAT FOR NEW GERNERAL or OLD EXTRA! I hooked it up and connected to it a dipole and made 3 contacts with 3 attempts on 20 meters. Radio is putting out a little over 180 watts on 20 meters USB and 50 on AM. (on a home made dipole ant) Although this radio is aged a bit, I always thought it had one of the better front end receivers of all the Yaesu's. It's reception is even a bit better than on my new FT840. Radio operates on 12 VDC. Needs a power supply or use as Mobile. Comes with factory Hand Held Mic and a Photo Copy of the Operating Manual with Schematics. US Certified Funds or Money Order Only. Buyer pays shipping. Unit ships at 32 pounds.

3177. Need help with Heathkit VF-1 vfo

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-19 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <n7md5.30$IH5.4218@bos-service2.ext.raytheon.com>

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Hi gang,

I have a favor to ask, and it's going to take a bit of trust on someone's part...

I am fixing up a Heathkit VF-1 vfo to go with a DX-40 that I am about finished bringing back from the dead (literally!). The VF-1 is in very good condition internally, but the round plastic frequency dial has a bunch of the markings worn off from being misaligned and rubbing against the inside of the front panel over the years (before I got it). I have been unable to locate a replacement. I have an idea; however, it requires that someone loan me an intact VF-1 frequancy dial!

I plan to photocopy the dial onto a piece of transparency material (the kind used in overhead vu-graf projectors). I would then make a round disk out of translucent off-white plastic, affix the transparency to it, and *voila*, I would have a new dial that should work fine! I'm not concerned about it looking "factory", just being correct and usable (the DX-40 it's gonna be used with isn't original either).

Now... if I could just find someone who would trust me and loan me their VF-1 dial. I don't know how to instill good confidence, except to say that I'm an Extra class ham (for a long time), I've been an active ham for 23 years, I have an outstanding feedback profile on eBay, a lot of folks on the newsgroups have sold to me, bought from me, and traded with me, and I promise to treat your loaner dial with the utmost care, pay shipping and insurance both ways, and get it back to you very quickly. Plus, I'm a serious CW op and always have been! You gotta respect that...

I'll even make extra copies and make 'em available for FREE to anyone who wants one (there's gotta be someone else out there in this same predicament).

Please, will you help me?

73,
Dean, K5DH

Thanks to all who responded to my inquiry. The general concensus is the
Kenwood would be a better choice as far as transmit, due to the 6146 finals.

Now the big question: Does anyone have a set of Kenwood twins in good working
and cosmetic condition that they would like to part with?

I would prefer the 599D, but would consider any model. For the time being I
can also get by with just the receiver.

Please e-mail me at both addresses below.

Thanks for all your help!

With all due respect...

You need a new wattmeter, or a more honest one. The FT-301 is rated at
200 watts INPUT to the final stage, NOT OUTPUT. Your post makes it
appear to anyone who knows the radio (and anything about amplification
theory) that you are posting something made-up after reading the specs
in the manual, not something actually measured on a meter...

Your mileage may vary...

Greg,

I am posting the email I just sent you on this and appologise to all on this matter. The specs on this radio do indeed say 200 watts input SSB. The readings I am getting are from a NEW MFJ 949 and an older Radio shack meter. Both are showing needle peaks around 180 watts. This could be from ballistics.

But to clarify the post, this radio was certified by Yaesu this month to be within or above all factory specs. I can a copy of this letter from Yaesu to anyone who whould be interested.

Thanks, and again, I am sorry for any misunderstandings this post may have caused.

MD

Greg,

You may be correct but my MFJ 949 and a cheaper radio shack meter are both showing this radio to be peaking the needle at 180 watts. It may be due to ballistics.

I will place another post to clarify this.

Thanks for the information

I'm looking for an "ear-talker" type microphone/speaker that incorporates both voice transmission/reception into an earpiece. The earpiece mike uses voice vibrations in the ear to transmit. The speaker is also part of the earpiece. It also incorporates a PTT fingerswitch for transmitting.

I've had one for several years that was manufactured by a company in Scotland called Airtalker, but they are now defunct. I've been very happy with the one I have, but the earpiece finally quit working properly and I'm looking for a similar product to replace it.

BTW, I this would be for an ADI 2m handie-talkie.

Thanks in advance,

Mark Dale

Phil....two possible answers......1. grounding strap inside radio....see ft100 list servers for info....2. Rf getting back into radio via mic, speaker or coax......put a two inch inside diameter ferrite donut under the atas100 with 3 or 4 turns of coax around the ferrite. This worked for me...Dale KC2PZ

Win95 pentium PC. 133 MHZ with 32 meg of ram 1 gig hard drive, 28.8 modem, sound card. Works good. Includes keyboard, mouse, power cable. Will make a good PSK31 or packet PC.

Also have an epson color inkjet printer in good working condition. Both units are not needed.

Will sale for best offer. Or will trade for ham radio stuff. HF mobile antennas, tuners, filters, radio's, accessories, etc. Make an offer.

Email me your offers or trades. All will be considered.

Seems that TNCs are PASSE with the new digital modes taking over. They are effective and they are cheap.

If all these modes were standard and not proprietary then it might be worth it but I see AMTOR dead, PACTOR dying and the rest never got off of the ground due to licensing and such.

I have in good condition a 212Z-1 Remote Amplifier. This is a solid state, 4 Channel AC or Battery operated portable in a case used for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $395 each plus shipping.

Hi folks,

I've got a Hallicrafters SR-500 HF rig (about 30 yrs old, I think), but I don't have a mike for it. The mike connection has two conductors inside the connector plus a shield that appears to be grounded to the rig chassis. What kind of mike would work with this rig? Any specific recommendations would be appreciated.

Thanks,
Rodney - KF4COV

3208. Re: Remote HF Radio Control via computer

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-19 00:00:00 UTC
From: Batman <batmanNObaSPAM@netins.net.invalid>
Message-ID: <03184ecc.9c371018@usw-ex0107-050.remarq.com>
Source record: 75261
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.equipment

The simple answer to your controlling an HF or any other radio via computer is ICQ 2000 and Netmeeting.

Set up your camera to see the face of the radio for visual and use the ICQ 2000 to get the IP address to direct call for netmeeting.

Set up a voice activated system for Ptt on your radio. Use the radio side computers four speaker system output for the radios mic audio and set up the audio thru the radios computer control panel.

For talkback use your speakers mic playback on your end. Hook up the headphone jack of the radio to its computer's mic jack and set the computer mic input thru the computers control panel.

Preset your squelch RF gain and all other functions. For channel change use a standard tone generator(like the phone) which can be converted to standard bit or hex output and tie it into a Y-jack input with your computers mike. Tie in the radios computer mic line with a Y-jack to a tone convertor(on the same line as the radios input for voice activation) and tie the convertor into you radios remote channel change jack (your radio must have this function or you will be stuck on one channel unless your friend will change the channel for you.)

When you want to change the radio's channel, punch in the channel number on your tone generator while not talking(using a mic headset on your computer with a off switch for mic would do fine.)

Your radio must have the channel change capability or you can't change channels. Some higher priced radios have this capability. The tone generator can be purchased at Radio Shack and the convertor can be purchased at a computer store, Radio Shack may even have one.

Hope this helps, other than buying high priced software and a new radio setup this is the poor mans way.

You will probably want to tie the computer to a seperate telephone line with no long distance call out or call forward/waiting for this.

I bought an Alinco DR-610T Mobile Transceiver and a MFJ 624D
Phone patch. I tried to set it up as per the instructions but
dont seem to get anywhere.
Are the two compatible in the first place and can someone who
has suceeded in settting up the phone patch pls send me step by
step instructions?
Any suggestions would be most welcome
Thanks

You got charged for weight...your package fits the 'standard' size range.

You could have sent it by USPS overnight for 44.45, or priority mail (2 days for your trip) for 18.60.

Your package is also much more likely to arrive intact using the postal service.

Big/Heavy packages are sent best by dog-buggy (Greyhound Package Express...and a lot of 500 mile or less hauls are SAME DAY delivery!)

Oscillator!

3222. Kenwood transceivers, older: ok to buy?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-20 00:00:00 UTC
From: Michael Kellogg <Michael@kelloggs.org>
Message-ID: <snflqq8o6tt28@corp.supernews.com>
Source record: 75058

I'm going to buy my first home transceiver second-hand, and I was looking at the older Kenwoods. The first ham radio I ever fooled around with was an old TS-820. These units look big to me, and I'm thinking they're certainly still using tubes. Question: What will the performance differences between these older units and newer ones be? And I've heard tubes are increasingly rare and a pain to replace. Will this be an issue? I see an awful lot of these things for sale out there...

One thing I like to do for that is go to eBay and do a search under the Ham category for that gear. I select "Search Completed Auctions" when it comes up, then I copy all that out and take it to Excel to sort it all out by gear and prices. This generally works for items that there are a lot of.

Tube is brand new. Bought it to retube an amplifier for a friend, who then backed out after the purchase was made. Purchase price was $329 plus whatever the tax was. I will take $300 OBO. That includes shipping. It will be shipped 2-3 day Priority. If insurance is desired and I do recommend it, add $5 to the price. I will ship it anywhere in the Continental U.S. or Canada. I guarantee it new, unused, and not D.O.A. Don't worry about packing. It will be packed very securely for shipment. Any questions, feel free to email. I can also send pics via email if desired.
Thanks,
James

Go to the office in person. Ask to use their phone. Do a *82 to turn off
call blocking and call your cellphone (with caller ID). Now you have
their local number.
```

I wish the local UPS terminal customer counter was open for 3 hours daily, they are open 1 hour in the morning and 1/2 hour in the evening at 5pm, then they lock the door at 5:20 so if you are not there by then just "tough s**t". Apparently they want to cater to businesses and couldn't care less about individuals. It is almost impossible for me to ever make it to the terminal on time. I'm going to look into FedEx ground shipping from now on, locally they are open 12 hours daily, PLUS Saturday hours. USPS is great for smaller packages, but as they get heavier the prices increase greatly.

The local office here in Fairbanks is then

In this area (Silicon Valley) for a very nominal fee, $1 or so, UPS will
pick up. With gas prices so high and congestion on the roads to bad this is
a bargain but you have to be home for the pickup and they don't even tell
you morning or afternoon and can come as late as 7 PM.

3239. battery capacity indicators

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-20 00:00:00 UTC
From: warrent_nc@yahoo.com
Message-ID: <8l7514$o9e$1@nnrp1.deja.com>
Source record: 75278

Does anyone remember a device with a rechargeable battery "fuel guage"?

The "fuel guage" I'm referring to is a couloumb counter that tells you how much battery energy is left. Laptop computers as well as cellular phones have this sort of capability.

I'd expect some of the early ham radio gear or early cell phones to have this capability.

Any insights?

Thanks,

Warren

Hello Gil,

Binaural CW is not a proprietary mode. Binaural is a technique that uses DSP processing to process the signal, perform some DSP magic and then spread the tones, high and low between the left and right speakers of a stereo headset. This technique improves your ability to copy and makes coping much less strenuous. There are no proprietary modes in the DSP-599zx, RTTY, PSK31 PACTOR are standard mode on the airs. We do provide special filters for CLOVER and the DSP-599zx user has the ability to "set-up" special filters for experimenting.

You are correct in asserting the lack of impact of the propriety modes on the air today. Several companies have invented (and re-invented) modes that require a special license to other manufacture to be supported. With the exception of a few message handlers it has not made a significant entry onto the bands. On the other hand, PSK31 is the one new mode that has captured the digital communities attention, in part because of the low power and small antenna stations' success with the mode.

Source record: 75280

Hello !
I have the following problem with my TS-450:
Only on the 20m band the radio drops down the power and
the swr rises up to 2 or more. If I change to any other band
all is ok. When I come back to 20 its all bad again.
The antena is OK (I tested with another rig). And after
some atempts the radio gets well again on 20m !
Maybe is some bad contact on the relays that change with
the bands, I dont know ?!
Before I start looking inside the rig I just would like
to know if anyone ever had any similar problem and how it
was solved.
thanks !

What's interesting is that UPS built its business with residential service. Now, they charge an extra $1 for residential deliveries, and basically want out of that service.

Try USPS Priority Mail . . . you will never go back to UPS. And, for very important items or expedited shipping, use only FedEx.

Hello group I plan to purchase an ICOM-746 and have a question about power supplies. I notice that MFJ has what they term as "switching power supplies" and that also have an adjustable regulated power supply.

The "switching" ones are smaller....is there a real difference in terms of power. Will one be prone to any noise (RF or otherwise) as opposed to the other?

Lastly if anyone has a personal favorite power supply please let me know why you like it.

Thanks please reply to group

You can request / verify shipping charges on the UPS website. Just fill in the form (to, from, weight, dimensions, etc) and they'll give you an approximate cost. Here's a link to the QuickCost page:

A scanner has a very wide front end and the intermods will kill you.

Outside of that, you should use a GOOD receiver for your repeater as
a the system is only as good as it can hear....

3263. IC756Pro Knowledge??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-21 00:00:00 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <1FPd5.7095$l76.507379@monger.newsread.com>
Source record: 75066

OK, I had a problem keying my Henry 2K-4 from the 756Pro, but not from my 751A

According to the schematics they both use relays and the circuit appears to be pretty much identical.

The 756Pro manual says not to try keying relays that take more than 5 Amps.

What happened was that plugging the keying line into the 756Pro would immediately key the amp. The system didn't care whether the transmitter was in the transmit mode or not.

Now for a bit of confusion.
I called Icom's service number and the tech told me that I should use an intermediary keying circuit if the load was more than 20 ma. (Not 5 Amps as the manual said)

I talked to another tech at a dealer who told me that it was a solid state keying circuit and I needed an intermediary relay.

The circuit diagram shows a relay and the manual says 5 amps.

So...being a bit inquisitive I took the 756Pro apart.
I found the keying "relay". It showed closed, but there was no power and it is normally open. So...Using the well known "If it's a relay showing closed when it should be open I hit it with a screw driver handle" Works fine now.

BTW, I did not try to key the amp. The contacts were closed when I first plugged in the keying line. I haven't found the current for the keying relay in the Henry yet and if it's more than 5 A, then I'll build/buy and intermediate keying circuit.

I have also had many problems living a not to Ritz neighborhood,with all personal deliveries.
I have requested signatures for receipt from UPS,Roadway,FedEx,also Postal service.
I am disabled and sometime do not come to door quick enough.and most of time package is left.on porch or at some neighbors house I don't even know.
and when I call to request some kind of tracking I seem to get a royal run around.
The Postal service tells me they have to big of routes for carriers to wait.
have even been told to use new zip plus six because carriers and sorters are better at numbers rather than letters.
This does not help.I even have a box on front porch to leave packages in and over size mail such as Large magazines and boxes, with a note in box and on lid of mail box as to instructions.(MOST DON'T READ,OR CAN'T READ.)
I Have had a couple of times that I am positive that UPS uses the signatures from previous deliveries,That they archive on there computers, and then put onto a new line as delivered,and received by.
Fact being I have an elderly lady that is here and most of time answers deliveries.
so they loose, leave or whatever and show signature from that person.
Last year I had a delivery several times and then I did not get two in a row.According to UPS records this lady had signed for these two missing packages. Well to their surprise this lady had been hospital for several days before and was several days after when delivery was suppose to been made.
they called me a liar and said I took and signed her name,and took merchandise.
I was almost 700 hundred miles away when all this was going on house locked and alarmed.I called Police and detective investigations proved no one was here and all facts were true.after 4 months went by they finally paid the claim and I then had to go through credit card company dispute, to get my credit and money returned. UPS kept telling credit card company same thing.another two months went by.Finally police detective had to get a court order signed by a judge to clear all this up. And you know what happened to UPS? NOT A THING.
So now I request a delivery time and make all abide by it.
The police finally found missing packages a drug dealer around the corner ended up with them and sold to undercover agent.I can see exactly why some one else would be aggravated with UPS and most carriers.

The 820 is mostly solid state. I believ it uses 3 tubes for
transmitting and the ones in it are more common and more forgiving of
mistuning than the ones that use what is called the sweep tubes as in
the Yeasu 101 rigs.On transmitt the signal is as good as most any of the
newer rigs. On receive it is very good. They do not have the WARC
bands on them. Some of them do have too much drift for the psk31 and
rtty modes. Friend of mine had to play withthe capacitors in one to
make it stabel enough for rtty about 15 years ago. For a first time rig
they are fine if the price is right. As they are about 15 to 20 years
old it is time for them to start giving some problems. The capacitors in
the power supply could probably start to need replacing. Just as with an
old car, they may go on for years or they may poop out at any time.
Atleast they can be worked on which is more than many of the newer rigs
can say for the most of us.

I don't know if it is new for UPS, Railway Express (long defunct) had volume weight rate. If the box was the size of a record box but only weight a pound (surprisingly common), it was charger for a mininum of 3 pounds due to the space it took up on the truck.

Source record: 75073

Hi Roger,
You have experienced what many others
have with their 756 or 756Pro. It happened
to me with my original 756 when using
my an old heath amp.

In your case, the contacts simply stuck.
And, with the help of your screwdriver,
unstuck it. The relay in the radio is
really light duty, and the contacts can
get tacked together pretty easily.
IF you still have the radio apart, you
can replace that relay with a heavier
duty contact relay that even Radio
Shack sells. Same size, same layout
for contacts and same coil voltage.
But it can take many amps at 120VAC.

I am not sure about your Henry, but
my Henry 3k-x keys with low voltage
and current, so I don't need an outboard
relay with my new 756 Pro. I had updated
my heath amp with the Harbach "soft-key"
mod to bring down the voltage to millivolts.

Your screwdriver trick is well-known
by others that have done the same
thing, but it is prone to happen again
unless you do something to avoid
the same condition.

Have fun,
Bennett ko2ok

I can't located the little instruction sheet for my DJ-C5...and its not on their Web site.
Can someone help with the instructions for entering PL tones? I've tried every combo of keys with no luck.
Also, is there a way to have it STOP on scan mode when a station is received?
Txs!

Source record: 75080

Can't help with the problems, but the thing about not stopping has been my major complaint about all the Alincos I have been exposed to. Seems like none of the ones I have seen will stay stopped on the received signal. One other complaint Ihave about a 2 meter one I own is that I can not lock out the memory channels in the scan mode. That is if I scan I have to scan all the frequencies I hhave in the memory. Talk about a big step backwards. Thought it was just me, but I asked the Alinco rep at a hamfest and he told me he though it was that way and later in the week when he had time to check with the factory he called me and said it was that was. Very nice of him to call.

Hi all. I have two nice items on Ebay for sale:

R4-C:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=386217419

and

T4X-C:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=386236750

As always I have a low reserve, and thanks for your interest.

Neil

3279. Re: Power Supply question?

Some switching power supplies generate enough RF noise to cause problems
with HF reception. They are smaller and lighter for a given current
capability as compared to linear power supplies.

I'm not familiar with the MFJ switching power supplies, so I'm not sure
who they compare to others or if RF noise might be a problem.

I use an Astron RS-35M, which is still going strong with no failures
after 13 years of almost continual use. I use it to power a couple of HF
radios, a VHF rig, and numerous accessories. A bit big and heavy, but it
just sits in the corner unobstrusively and does its job.

No connection to Astron, just a satisfied user.

Its not new. UPS has a standard size they go buy. Anything larger is
charged extra plus weight. Would you want to deliver a 4 pound box
about a foot squared or a 4 pound box about 12 feet long and 8 feet
wide?

Maybe my opinion will help you decide. I know I may get flamed for this, but oh well. I prefer solid state equipment over tube rigs due to the fact I am in a small area and tubes will heat a small room in no time. Also tubes are becoming rare and used ones are usually just as much as new ones. Solid state is usually more tolerant of abuse than a tube. You have to know what you are doing when you use an old rig or you may just waste a tube. And yes, I like the idea of the newer rigs takeing up less room, but to see a clean and new looking Kenwood tuber rig sitting on the bench is a great sight. It all depends on your flavor of radios. Also note, A solid state rig will in most cases cause more TVI than a tube rig.

You are the only one that is offended by someone listing ham radios for sale on a Ham Radio News Group... Duh!!! I do not know what your agenda is but if you do not want to buy any of my equipment or any one else's equipment that is listed on the ham radio news groups, why not just ignore the postings and read about something you like. I think your research as you call it is a little lacking. I am not a "BIZ" as you call it. The radios I list are in use at this time at my Ham Shack. But from your ramblings and bashing of people who list ham radios for sale, I see that you never let the truth stand in the way of a good story. You have never called me or emailed me, you want someone else to do your dirty work for you... but thank goodness the people whom you are trying to enlist for this have better sense than to bash a Ham, K5JOE, for listing quality ham radio equipment on a ham radio swap and equipment web page. I swear I have no Idea what the heck your agenda is...If you are not afraid to tell us your name and if you are a Ham, which I really doubt, tell us hams in the news groups you name, address and call sign..
Mine is available at www.qrz.com, is yours?
I apologize to everyone on the news groups for taking up the space to answer this basher, and will not respond anymore to his flaming.

Motorola UHF GP350 HT
16 Channels on 464 MHz now. 430-470MHz
It comes with battery,ant,desk charger. They all were new in the
middle of 98.
Looks and works very Nice! They all have a small number on
lower bottom of HT.
I have about 10 of these.
250.00 each.
And they will not be dead on arrival or money back.

Hi Bill,

You can go to my http://sonic.ucdavis.edu amateur radio pages for my article on installing a proper cathode cutoff in the gla1000. I happen to have a copy of the manual right here, I just sent a photocopy of the manual to another ham. If you need page 7 (I can't see why, it's just another amplifier), I'll be happy to scan it and send it via Email attachment. Email me direct and tell me where you want it and if gif or pdf format is fine.

cheers

If your using large batteries, Crusing Equipment sells them. Batterylite is another Company in California (on the web). If your using smaller batteries and have the space, buy a simple data logger like one from Radio Shaft (shack) and write some simple code to track it via the logger.

Similar instance happened to myself, But UPS didn't argue too much and a check was mailed after 3 months of dispute. It took along time to get it, but All I did was put a trace on the item 2 times and filled out a claim and 2 weeks after claim, a check was in the mailbox. However I can agree that most companies do this since it has happened to me while waiting for a tow truck contracted by Triple A. I gave them the exact address and a landmark "Safeway" supermarket and they never did find me. After 4 calls to Triple A to get a tow truck out, I flagged down a Police officer exiting from the inside of Safeway (Knowing he must be on break, since he had a small amount of food with him). I apologized to him for interupting, but I asked him to help me. He called Triple A and requested a tow truck to the same exact address. Wow! 10 minutes later, the tow truck arrives! Imagine that, the Influence of a phone call from a Union City Police Officer really got them on there toes. After the day was over, a few weeks later, a letter from Triple A showed up stating that My 3 free tows for the year were used up and I had to pay for 2, one being not really used and the last from when the officer made the call. I called Triple A offices in Sacramento and had them send me a Copy of the address and details of the calls that the call taker had entered in the computer from my attempts to get a tow truck on that day. I received a distorted photocopy that was hardley readable, not because of the writing, but because of the quality of the copy. I took it to the Union City Police Dept. and asked to see the officer. He wasnt there at the time, but the dispatcher stated she would have him go to my home address and meet with me. The officer arrived at my home, After reviewing the document, the officer placed a phone call to Triple A in Sacramento and explained the document to them and that all the addresses taken down were the exact same as the one he had given them. After the officer was finished, Triple A reached me on the phone and stated that the letter was dismissed and I still have my 3 free tows.

Thank you Triple A for wasting my time and your own over a stupid reason that is still unknown to this day! Maybe UPS can learn to handle customers better and give them the benefit of the doubt.

5 Amps???
Sounds like something I could use to turn my well pump on and off!
Sounds a bit 'wrong' to me.
In general, most rigs made in the last 15 years or so need a entermediary
relay.
If it was an old KWM2 or SB102, I think they were beefy enough.
Not sure about TS520,820, 830, FT101, 901 etc....(80's rigs)
Perhaps someone can clear up the whole relay switching thing.
Currently, I am swithing an L7 direct with my Kenwood 850, and have not had
a problem.
What is the range of voltage when someone says an amp has high voltage on
the contacts vs. lower (safe) voltage???

The interface allows for computer control of the radio in terms of modes,
frequencies and memory. Also S-meter readings are provided. It does not do
anything to teh audio.

3310. National HRO-500 Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-22 00:00:00 UTC
From: Jim Bo <jbollit@ix.netcom.com>
Message-ID: <397A1021.F20052AE@ix.netcom.com>
Source record: 74998

Hello,

I have a National HRO-500 receiver that has a defective BFO coil.

The reference designator is L-24. It is a 1 milli-henry
adjustable coil with a low impedance tap.

On a long shot, does any one have one that they can part with?

The manufacturer's part number is 273F6523. Does anyone
recognize this part number scheme that could identify the
original manufacturer of this coil?

The size of the "I.F." metal can that houses the coil is 3/4" x
3/4" x 2.0" and has a 1/4" slug to adjust the inductance.

Does anyone have the winding info (number of turns) on this coil,

especially where the low impedance tap should be on the winding?
Worst case I could wind my own if I had the # of turns for the
low impedance tap.

Any and all help greatly appreciated, I want to get this radio
back into service.

Jim

I have a Dentron GLA 1000B and an Icom 736. I am abt ready to go here except, in my Icom manual it indicates hooking up both the "alc" and the "send" to non Icom amp. However the dentron only has one rca Jack... Which should I use from the Icom. Also, should the red xmit light stay on at all pts when the amp is either switchted to volts, current, or rel.out? Or should it just stay on when u transmit.? Pls respond by email.

tnx
and forgive my ignorance.

Source record: 75001

Does anyone have, or know the whereabouts of the long hex tool used to remove the oscillator cover in the HP606 signal generator? I need one to check the tubes, as it is not possible to get to them. Even a very long allen set would work. Tried the auto parts and Ace hardware. No luck. The original is usually kept with the gererator in a pair of clips on the cover top.

You can e-mail me direct: wb6vse@ipa.net

Thanks
Mike

From: treynolds@my-deja.com
Message-ID: <8laqm0$9ao$1@nnrp1.deja.com>
Source record: 75115

The 820 used three tubes, 12by7 driver, and two 6146 or equivalent finals. These are all very durable and quite easy to find. Don't let that scare you.

The rigs are fine starter rigs. I have an working 820 at home and one for parts. I got them both (plus the matching speaker) for $150. I also have a TS520S plus VFO, speaker and 2 meter transverter. I use it every day. $150 is a reasonable price for a 520S locally, more via the internet.

You may also consider the next generation, TS530 and TS830. They will cost a little more. But they have the WARC bands, are more stable and generally more desirable.

Good luck,
Tom

I'm not sure I agree with the "noise" factor as stated,
the smaller switching supply I have is no problem as far
as that is concerned.
Be aware, they run hot. Therefore, have a fan. And, the
fan I have on my MFJ is LOUD. I like quiet... I changed
the fan to another model fan, that still blew air over the
components, but is still too loud for my tastes.
Have many astron non-switching supplies, they are very
nice for quiet environments. I actually prefer them over
the switching supply.
For what it's worth...

If you're gonna carry the supply around, use switching.
If it's gonna sit in shack, use conventional. My 2cents.

news:8lb3qk$j6l$1@ostrich.cybercomm.net...
> 5 Amps???
> Sounds like something I could use to turn my well pump on and off!

I typed 5 and meant 2.
But the starting current for a well pump is a lot higher than 5 Amps. Our
old pump had a starting current of 20 Amps. (3/4 HP)

The circuit is rated to handle up to 16 volts at 2 Amps. There is a warning
not to exceed that on page 19 (installation and connections) for connecting
a "non-Icom Linear amplifier" which quoting from the Icom manual "The
specifications for the SEND relay are 16 V DC 2 A. If this level is
exceeded a large external relay must be used"

> Sounds a bit 'wrong' to me.
> In general, most rigs made in the last 15 years or so need a entermediary
> relay.

I have a Icom 751A setting right next to the 756Pro and it handles the Henry
just fine. The circuits are supposedly the same.

> If it was an old KWM2 or SB102, I think they were beefy enough.
> Not sure about TS520,820, 830, FT101, 901 etc....(80's rigs)
> Perhaps someone can clear up the whole relay switching thing.

The 520, 820, 830, and 101 had some rugged keying relays. Pretty good sized
too, compared to the "modern" rigs. <G>

One thing I tried to get across is that the amp keyed as soon as I plugged
in the 12V DC keying line, meaning the relay was *already* closed, but I'd
never used it. That pretty much means the contacts must have been stuck
when the rig came out of the sealed box.

> Currently, I am swithing an L7 direct with my Kenwood 850, and have not
had
> a problem.
> What is the range of voltage when someone says an amp has high voltage on
> the contacts vs. lower (safe) voltage???

I'd guess that would vary with the definition of the manufacturer of the rig
<G>.

One thing that bothers me is that the manual says 16 V DC @ 2 Amps and the
Icom Tech told me not to exceed 20 ma. That is a factor of 100. Then my

751A works just fine with the same circuit and ratings.

It sounds more like Icom ended up with some substandard relays, or substitutions.

There are several possibilities. One suggested to me via e-mail (and that I had not thought of) was to use an optoisolator circuit.

As I've worked with and built a good many circuits using them (I was a instrument tech in industry for 26.1 years before going back to college for a BS in CS) and they are very reliable.

Another is that I remembered that any time we used DC relays we put a clamping diode (regular diode in the reverse voltage direction) across the coil.
There are none in the Henry.

That reverse voltage spike caused when the contacts of the controlling relay open and the field in the coil being controlled collapses are sometimes tremendous and more often than not are the cause of stuck contacts instead of excessive current...Unless the line shorted, or the relay was truely fragile)

So, my next step is going to be installing a *couple* of clamping diodes across the relay coils in the Henry and to measure the current in that 12 V DC keying line.

The relay in the 756Pro *appears* to be one that could be changed rather easily.

Thanks again for the suggestions,

73

3339. Astatic microphone question.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-22 00:00:00 UTC
From: watsons@aol.com
Message-ID: <20000722013449.22617.00002199@ng-ct1.aol.com>
Source record: 75133

I've been looking at used Astatic D-104 "lollypop" mics. What is the difference between T-UG8 and T-UG9 bases?

I saw on one post where the responder to a question said the the 9 had an amp in it but the 8 did not. But I have seen E-bay auctions for 8 bases with an amp in them. I thought maybe the 9 base was one with a PTT switch in the base and the 8 was not, but I have seen E-bay auctions with 9 bases w/o a PTT switch in the base.

Can anyone clear this up?

Hi All,

Cleaning out the shack. I have the following forsale:

Alinco DR1200 2M packet radio 25watts includes original manual, box, powercable and OPTIONAL dtmf mic. Radio is currently mated to a KPC-3 V5.1. Excellent packet setup in excellent condition. Asking $200 obo.

Icom IC-T41A 70cm 6watt portable with 2m rx. Includes original manual, 6v 800mAh battery, wall charger and AA alkaline battery pack. No box. Has a scratch on the display, but no other scratches or marks otherwise. Asking $125 obo.

Radio Shack HTX-10 10 meter mobile. Radio has been used mobile and does shown signs of wear. Radio works great otherwise. Asking $95 obo.

All radios were in a non-smoking environment and are guaranteed NOT DOA. Prices are PLUS shipping and prepaid my MO or certified check.

Contact me at mycallsign@xmission.com for more info.

Me, I come here to read about, ask about, learn about, and look for
equipment.

I expect to see equipment advertised by individuals and companies.
True there is a swap group, but I'd expect to find modern, and other
equipment here if it's related to ham radio.

3343. Help with Ameritron AL 84

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-22 00:00:00 UTC
From: Mike <michaelj@networktel.net>
Message-ID: <KGbe5.542$qm1.10269@news1.atlantic.net>
Source record: 75137
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I recently rebuilt an Ameritron 84 and have had great results with 20 meters getting the full 400 Watts out with 100 watts in SSB. Great reports on 15, 20, and 40. Rig has been very stable and clean for a tube rig.

I contacted Ameritron on the mods for 10 meters, They faxed me the mods but their example amp is a bit different than mine. They show a tap off the tank coil two turns from the 15 meter tap. Their diagram shows a 5 coil tank coil. Mine has seven turns, Their other mod to complete it has a jumper between the input resistor and a 68pf cap. Mine rig has 3 caps in this location and none of them are marked. I have tried several different jumper locations with no luck.

Their Mod instructions are for serial # 100 and higher. My serial # is in the 70 range.

I talked to an Ameritron tech and he had no idea as these AL 84's were made in Ohio before their move to Miss.

Any one with any ideas is appreciated! I use 10 meter in my car and the band is really starting to open up. I'd like the extra punch on the base unit Yaesu FT840 which gives me about 80+ into a beam.

Thanks Mike

3344. ***Kenwood TS-520SE vs. Modern Tranceivers: Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-22 00:00:00 UTC

About 10 years ago I purchased a Kenwood TS-520SE hoping to eventually get my license, which I'm just working on now (got my element 2 certification this week and am now learning code). I also just ordered a manual for the old Kenwood and parts for a couple missing switches (many thanks to your replys to my earlier postings). I'm wondering what advantages there are to going out and purchasing a new transceiver versus keeping and using my old Kenwood. Do current models offer anything that my old Kenwood doesn't have? (beyond nominal differences) (performance, additional bands, filters, modes, etc.) Any thoughts are appreciated.

I got rid of AAA several years back when we had a light snow,If you know how to drive in the snow, and they would NOT make a run to the Hospital to where I was plowed in at.
I then called a friend of mine whom then went by my house and picked up a logging chain and we then used his small Dodge Omni to pull my car out through the plowed in mess at the hospital.My biggest gripe was when they had told me that it was not a need of emergency for me to leave the warm hospital.
Well I had an 88 year old home alone and no way to care for her self with out assistance. A few hrs. yes but not all night.
And I had not ever had a tow from them in 25 years.
It was a waste of money so now I pay $5.00 a year on auto insurance for towing from and accident or break down.and if I need distance tow I have spoken to several tow companies that will tow me several hundred miles for less than AAA would charge for a year.I now have added protection through my mobile telephone service inexpensive also.Cash in the bank.

Steve,

It is marked in the book as an 8pin DIN plug but it isn't. The pins are a part from Yaesu USA for under $5. Standard 8 pin din plugs are too wide to fit I had to do the same for my data port on my FT 840 to hook up an older linear. It was worth the $5 than to try to make one myself. In fact, over years I have I have found that YAESU parts to be of the finest quality and lowest prices

Lots of relays will have a spec to handle a large ammount of current.
The catch is that is is a resistive load. The surge current on closing
and opening of an inductive load is much more and you have to derate
them by a large ammount. I am thinking by about 10 to 1, but that is
just off the top of the head and it may be even greater, say about 100
to 1.

Motor starters are usually designed to handle the inductive loads and
are made so they will blow out the arc made when an inductive load is
opened.

I agree with the fan noise. As most hams will be in the receive mode most of the time that fan can be distracting. Made a mistake by not checking for a fan and bought a supply with one. Finally put a switch on the fan so it would not make noise while receiving. QST had an artical inwhich the switching supplies were checked out. Don't have the artical but it was within the last year.

One othere thing is the Astron and several others use a very similar circuit in the nonswitchers. Usually easy to troubleshoot and fix if they go bad. The main differance in them is the quality of the parts uesd. I have had good luck with some of the Pirimid supplies, but usually derate them to about half what they are rated to run.

The Astron nonswitchers do have one bad fault. If the power is suddenly cycled off and on the overvoltage circuit will sometimes fire and youhave to cut the supply off for about 30 seconds and then cut it back on. Not usually a problem as I have one of the 50 amp supplies in the shack and it has only done that once. Had one at a repeater site that was about 15 miles fromthe house and it was a major problem due to the half hour drive just to switch the thing off, wait 30 seconds and then switch it back on. There is a circuit that will eliminate that problem. Can be found on one of the repeater builders web pages.

Source record: 75147

I just bought one from the RF Connection, I think they were $1.50 each.
If you are using it for the FT1000 band data then you will need a
DP8/262. Also note the plugs that I got pin 6 and 8 were switched.
Just follow the pictorial in your owners manual page 7 and you will not
fail.

The hookup into a Ten-Tec Titan uses the band data and the key in and
key out on the Titan amp, works very well.
Good luck

Dale j.

If one buys the additional filters and learns how to use them conjunction with the signal processor features, you can actually pull SSB and CW signals out of the noise floor. Therefore, works great on HF, 6 and 2 meter SSB and FM (voice and Packet).

Have had some difficulty using it on PSK31 as my filters are only 300Hz narrow. Had to "misconfigure" a SSB filter setting to fool the 746 into thinking it wider than the 300 Hz I put in. What is really needed or maybe I need to learn how to, is set the audio passband for a high frequency respsonse fo r HF RTTY and PSK31. The Alinco DX-70T I used could be set up to do so and made these modes very easy to tune even with wide filters.

Overall, it is a very good buy for the money (especially with the $200 off coupon). I comparison shopped before buying mine, looking at specs and feature for the dollars paid.

Basically, the operations are mainly repeater based voice, with some simplex Packet and voice.

The ARRL repeater guide and VHF Packet books are good sources of information.

You will probably note depending how close to a metro area you live that 2 meters does at times sound like the 11 meter CB. Like the one answer you got pointed out.

I mainly use my 2 meters to keep in contact with several friends and SKY WARN weather activity due to the Tornados that pop around here.

3357. Re: repeater question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-22 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <39796EB5.DA731C@dialpoint.net>
Source record: 75151

Even with 3 conversions the front end is still very wide. For a
repeater you want as sharp of a front end as possiable. What you
normally get with the triple conversion is rejection of signals that are
images of the IF frequency. This is not normally a problem in
repeaters, the near by transmitter frequency is.

Would ONE copy of this message not have been enough??
And I of course am already on record as being against any kind of
Commercial Spam.. The Charter is against commercial spam also.

Just my opinion..

Bob

> for a while before you can pick up the lingo.

2m reminds me of what 11m might sound like in Mayberry (say Hi to Aunt Bea for me :-). The operators that I've talked to in my area, metro Atlanta, tend to be polite and work hard to run a clean station. Along with the locals, we have a number of short haul truck drivers that frequent the repeaters. They've helped me avoid bad traffic situations a number of times by providing advance warning of the problem as well as alternate routes.

Even though the original poster mentioned that he'd been a ham since 1988, there may also be new hams reading this. Please forgive me for covering things that are obvious to more experienced hams.

You'll probably want to pick up an ARRL Repeater Guide ($8) for determining frequencies, offsets, and subaudible tones. I keep one in the shack, one in the mobile, and toss one in the suitcase with a handy talkie when traveling out of town.

On 2m, you are required by the FCC to give your callsign once every 10 minutes and at the end of a conversation. You are not required to give the other stations callsign at the end of a conversation, but many 2m operators do so anyway.

Instead of calling CQ, most 2m operators will say something like "kg4gge is listening" or "kg4gge monitoring" to let other hams on the repeater know they're interested in finding someone to talk to.

When calling a specific station, you generally give their callsign followed by your own, as in "kg4frs, kg4gge" or "kg4frs, this is kg4gge calling". If the called station does not comes back within a few moments, the calling stations clears the frequency by saying something along the lines of "nothing heard, kg4gge clear".

When 3 or more stations get involved in a conversation, they will sometimes use a "round table" format. When the one station finishes transmitting, they give the next station's callsign followed by their own to specify the n ext station in the rotation, for example "pick it up kg4frs, this is kg4gge - in the group". Passing the baton like this helps prevent two stations from "doubling" (talking at the same time). A second or two of dead air is generally left between each transmission so that new stations can either join the conversation or request the use of the repeater for some other purpose.

If you want to join an ongoing conversation or request use of the repeater, you quickly say the last 3 letters of your callsign between the other station's transmissions. The operator who was about to pick up the conversation will generally acknowledge you immediately and allow you in. Emergency traffic is signified by saying "break break", all conversation should cease at this point, with the other stations listening to see if they can provide assistance.

You generally won't hear 10-codes on 2m, but some operators like to use a few of the Q signals. QSO, QSL, QSY, and QTH are the most prevalent. Many operators also use 73, the old railroad telegraph signature for "best regards", when clearing out another station.

That's 2m FM repeater operation in a nutshell. As several folks have suggested, just listening to the activity is probably the best way to determine the decorum used in your area.

73, Mike

=======
Howdy Xtx99 -- lots of additional features on the new rigs such as memories, quick memos, Scan Modes, SWL coverage, power level control (lower it to QRP levels), FSK Mode and inputs, Bandscope outputs, 10M repeater operation with PL, Auto Tuners (both TX and RX), CW Reverse, Bandstackable Registers, Multi Filter Selection, S-Meter Peak Hold, Dual VFOs, TF-Set, Fine (1Hz) Tuning for touchy modes (PSK), Direct Keyboard Freq entry, TX audio equalization, Provision for Voice Synthesizer, Built in CW Keyer, XIT, Front end crunch controls (AIP & ATT), FM Mode and Squelch, Provision for foot switch PTT), Frequency up/down on the Mic Jack, DSP, Digital Filtering, Auto Zero Beat, Provision to tailor your audio (bass, mids, highs), Auto Notch. Lots more. At first may appear as a lot of whistles and bells -- but WOW many are indispensible once you get used to them.

Maybe visit the local ham store and try one out -- these aren't your Father's Swan 350!!

Maybe in your town Jeff.

Here in SLC operations are good, clean and fun. The only problem with 2 meters is that it's VERY crowded. I've heard a lot worse on HF.

From: Chris <c279m@yahoo.com>
Message-ID: <4jke5.122$u.5240@news1.news.adelphia.net>
Source record: 75191

Does anybody know what I can do about the battery with his handheld? It's a Nicad model BP-173 but it's talk/standby time is horrible! I used it for talk-in at a local hamfest and it died within a few hours on low power. Is there a better battery out there for this radio? I also heard that Icom makes a battery case for this HT that uses AA batteries. How is the performance of that pack? Any help on this battery issue would be great.

I also did a search for mods for this HT and found a site that had a mod for just the IC-T7. Would that mod work on this rig? Any others out there other then freeband?

Thanks for your help in advance.

Dave,
I have purchased Rohn 25G sections on 2 occasions from:

Amateur and Advanced Communications
3208 Concord Pike, Route 202
Wilmington, DE
302-478-2757

You would have to pick it up, though.

While your advice could apply to repeater operation, operating simplex presents another story. One doesn't have to operate simplex very long before hearing a "one sided" conversation. Depending on you location to the answering station you may never hear it. I have heard stations breaking in on a conversation because they couldn't hear the answering party. Most people will wait for the "nothing heard", or "no contact" before initiating a simplex contact themselves.

Hi

I am considering getting a ft-920,and already have a MD-1 mic.So I was wondering if the MD-1 would work on the 920.It seems that the MD-100 is the recommended mic for this rig,but since I have the MD-1, I was thinking of using it ,and getting the MD-100 later on.So, will the MD-1 work ok?Thanks to all that reply.

Hold down the function key until the (inverse) "F" flashes on the
display (about 2 seconds).

Press the vol/squ - rpt key to engage the pl tone mode.

Pressing the vol/squ -rpt key will cycle through the three pl modes.

Off
Transmit PL, no Receive PL Squelch (solid "T")
Transmit PL, Receive PL Squelch ON (flashing "T")

The up and down arrows cycle through the different PL frequencies.

3426. TS-820S Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-23 00:00:00 UTC
From: "Caleb L. Wright" <caleb@taconic.net>
Message-ID: <397AE97B.BF986B34@taconic.net>
Source record: 75018

My old reliable standby rig, TS820S, has developed a problem so would appreciate any suggestions for its repair.

When I key the mike, the digital readout seems unstable and indicates a difference between receive and transmit.

Wonder if this means if there is some thing wrong between the buffer and VFO.

3429. Re: TS-820S Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-23 00:00:00 UTC
From: n0dg@aol.com
Message-ID: <20000723090239.26336.00000163@ng-fv1.aol.com>
Source record: 75021

As a long time user of an 820 I read many problem fixes. Seemed that the big majority of digital readout problems were caused by poor ground on the circuit board.
Losen all mounting screws, set star washers to new position and retighten.
good luck.
Don (N0DG)

A DPL Micor will probably do what you want; the standard Micor
VHF Mobiles are PM (using the Serrasoid modulator at that),
but the repeaters and DPL Micors have a different channel element
(with an additional pin for direct-FM). You can retrofit a
4-pin channel element to a PM Micor but you have to make sure to
apply the modulation to the pin (at least one person reported
success with this but said it wasn't worth the trouble).

Donald Smith wrote:

3436. HF mobil antenna question ???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-23 00:00:00 UTC
From: compcnsult@aol.com
Message-ID: <20000723115805.10316.00000590@ng-fj1.aol.com>
Source record: 75028

In my 32 years as a ham I have always used VHF or UHF from the auto. Recently I have had the itch to put my FT-840 in the van with a MFJ yuner and run HF from the car since I never seem to gave time anymore to do any hamming at the QTH. I have considered both of the Comet and Hustler antennas. I think I would probably operate mostly 10,15, and 17 meters. Now my problem: I have a Dodge Mini-Van so I would want to mount the antenna on the rear bumper. Is having the antenna mounted that low and close the metal on the rear hatch going to screw up the ant radiation pattern up so much that it is not worth doing??? I also park in a garage so I was kinda leaning toward the foldover mast idea. Some of you long time HF's let me know if this is worth fooling around with or just a waste of time, effort and MONEY! Also do I need to run the radio power leads directly to the battery.?

Sorry for such a long post but I am losing sleep thinking about this and that makes me cranky! Then that leads the XYL to want to throw me AND the radio out for the garbage.

Source record: 74847

I too am considering the Icom 746. Another radio I'm looking at is the Yaesu FT920 for a about $150 more. It doesn't have the 2 meter, but I have a 2 meter moble mounted as a base unit. However, I do like the concept of having HF, 6 and 2 meter one radio. Anyone care to compare and comment about the FT920 vs the IC746?

3459. FT-33 offset problem...help ???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-24 00:00:00 UTC
From: Duffer <hduff@ica.net>
Message-ID: <397CDAC7.1301E277@ica.net>
Source record: 74851
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Hi there.
I have a Yaesu FT-33R 220 MHz HT that has a problem.
I aquired it in this condition and believe that someone was doing a
little fingerpokin inside the unit.
The problem is that the unit will not offset the transmit frequency when
the RPT
button is pressed. The micro does respond to the keypress and the - or
+ icon
appears on the screen but the unit simply doesn't TX on the proper
offset (+ or - 1.6 MHz). It transmits on the same frequency that the
receiver is set to (simplex).
There are signs of tampering around what appears to be the configuration
diodes
that often sets the micro for whatever radio chassis the microcontroller
board gets installed into. I'm wondering how it should be by default for
the FT-33R.
Perhaps the offset problem is related to this.
If not, I'd like to hear from anyone with suggestions to remedy the
problem.

Also, if anyone has a schematic for the micro section of an FT-33 or
FT-23,
I'd be grateful to hear from you.

Thanks de Hugh VA3TO

Source record: 74958

Hello,
Its a great rig, a very lively Rx and plenty of poke on Tx. I've got one here still and it compares performance wise better than a lot of modern solid state rigs.
Its quite easy to align if your rig is not up-to scratch already.
I can supply alignment instructions and some modifications, its easy to build a VOX adapter which gives CW break-in operation. Other improvements include reduction of mains hum, which though not strictly necessary, makes the rig more fun to listen to. Also you can add CW side-tone.
The 500C model is very similar but has a little more output power and CW side-tone (which is a bit crude - I describe it as a shark-tooth side-tone waveform.
pse e-mail direct if you want details of the mods.
Suggest you keep the PA input power on the low side, because the PA tubes are becoming nearly as hard to get as hens-teeth ! You then will only be a few dBs down on a pokey signal. I hope you enjoy it.
72, Denzil G3KXF.

I have a BRAND NEW (still wrapped in the plastic) Power Plus HL-35V (made by RF Limited) 144-148Mhz, FM/SSB Linear Amplifier for sale. RF input is 1/2 to 5 watts: RF output is 20-35 watts. Gain is 8.5 db minimum. This amplifier is perfect for handi-talkies, etc. Will ship in continental U.S. for $65. Email privately, if interested.
Thanks,
Joe, W5LX

3475. FT-990 Questions

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-24 00:00:00 UTC
From: BHL <philoxeny@hotmail.com>
Message-ID: <vlOe5.585$C_3.41253@news7.onvoy.net>
Source record: 74960

Is it difficult to change the bulb for the analog "S" meter on the left side? Is there a common bulb I can get at RS?

Is there a mod to enhance the sensitivity on the AM broadcast band? especially below 800 Khz or so it seems to go somewhat flat. I know for the Ken TS-850 there is such a mod and thought there might be one also for the FT-990.

Also, I coupled about 4 ft or so of coax directly to 450 ohm ladder line so I could use the auto tuner. It works very well as I thought a 4:1 balun or so would be needed. It tunes my 130 ft inv. vee on 10 thru 160 . But the worst match is on 10 meters oddly enough and here I get feedback thru the internal speaker, even with the volume off. The farther away from the radio I get the ladder line, the less the feedback but is there another fix?. It doesn't do this on the external speaker but I want to use the internal one.

Any help or suggestions, answer here or e mail me at philoxeny@hotmail.com

What if the person you are calling did answer you but isn't making into the repeater for some reason, wrong or no tone, radio on low power, transmitter dead, whatever. I f he/she hears you say "nothing heard" (I use "no contact") then they know they aren't making it, for whatever reason.

Hi,

Has anybody out there, like myself, got a Kenwood r820. If so have you ever noticed the noise blanker doing anything. Apart from possibly once and that might have been my imagination the circuit seems to do nothing at all. Could it be broken ? or is this par for the course. The manual talks about pulse/ignition type noises being eliminated. There may well be none to eliminate, nevertheless I'd would have thought it would have had *some* sort of effect on just about anything, however slight.
My last radio, a Racal RA17L, also had a noise blanker and was just about as useless for me, but it did have slight effects on the general tone of the signal.

Thanks for any replies,
Mike

After extensive research, and much trading, I got a new Icom IC-746 this week, I believe it to be one of the great values in Amateur Radio. I have the FT-847, sitting next to it, while the two radios are close enough to have to choose from. If you want 440 and satellite capablities get a FT-847, if you want vox, an autotuner, easier controls with less menus get the IC-746.

If you need to tune up why not just turn up the power for 10 seconds tune then lower your power? You can't go wrong either way.

That is a good price on a good radio. But, the YL says that my
IC-751 will still work fine. But, then she is going to let me put
up a tower.

Micor 2m conversion repeater
model 893RCB-3145B-RH52,
on 146.700/146.100,
100w solid state final,
new helical RCV filter installed/tuned,
with full duty power supply,
installed in cabinet,
with service manual.
Scom 7k controller w/ all options, (PL & patch),
recently sent in for latest firmware upgrade,
with user manual and windows software.
new price $900
Telewave duplexers, NEVER BEEN USED - NEW!
tuned for above frequencies,
model TPRD1556.
new price $1572

Total replacement cost is about $3972 - asking $2000 + ship
Serious inquiries ONLY

Regardless of how or why the original was posted, I find it amazing
that 'hamtrader' would try to pass his postings off as 'personal'

Especially when he's tied to a business.

And when in the past he's had controversies here on this newsgroup
as well.

Remember, this was the guy that posted a commercial message about
a discount for 'real extras' that could prove they were extra before the
5wpm change.

Well, if we're going to blast AAA... Here in MASS they have a deal going.
It's cheaper to belong to AAA than to not belong, as you get a state mandated discount.

I got a flat on day in my Jeep when I hit a rock that punctured my sidewall. No big deal, changed the tire and on my way. I knew better than to call AAA. But I got 3 miles and my spacesaver spare went flat. (The bead didn't seal, it must have been low.)

I called AAA on my cell phone. Well, that 30 minutes they said turned into 2 hours. I called, again, and again, and again. Finally a truck showed up. He said he'd HAVE to tow me to his garage for an extra fee. He REFUSED to put air in my tire. Well, I told him to 'get lost', and called AAA back and really let them have it. The supervisor was extremely apologetic, and offered to have someone there to 'change my tire for me' when I got back with the new one.

(A side note, a couple days later I stopped at my 'normal' garage in my home town, and the guy took a look at the spare and pup air in it no charge.)

Well, guess who didn't show again!

AAA SUCKS big time!!

I called and complained, but they have such a monopoly here in New England they have no incentive at all to change. If I travel out of the area, service is great.

TS-570DG Owners,

How does the cooling fan operate? Is it on all the time, only in transmit or only when the radio gets warm? Is it noisey? Tnx in advance.

3496. Re: Using Racal RA17L in US

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-24 00:00:00 UTC
From: Denzil Roden <denzil@rodend.freeserve.co.uk>
Message-ID: <8lhvul$1k1$1@news7.svr.pol.co.uk>
Source record: 74981

Hi Patrick,
RA17L's were designed for the world market, so yours should be okay on 115 Volts ac. It will probably be wired for UK/VK mains voltage = 240V. If you look inside, you will spot the potted mains transformer mounted on top-side of the chassis. Turn the receiver on to its back (great exercise!) and look at the bottom of the mains transformer, for little ceramic insulated solder terminals. Either, the terminals on the base of the transformer will be identified, or there will be a plate attached to one side of the transformer pot, which identifies them. You should see Two x 115V primaries (for 240V - linked in series, with the line input wired to the extreme ends.
Modify for 115V =
1 Remove the link between the two primaries,
2 Leave the line input wires connected as they are,
3 Cross-wire the now-free ends of the two primaries, to the Hot ends of the opposite primary, so both primaries are in parallel and in phase.
There may be a fuse in series with the live-line input. If the 115V fuse rating is not marked on the chassis, you need to double the fuse rating (You've halved the voltage, the power remains the same).
You can remove or cut off the UK power plug and fit a US plug, preferably with a ground. The UK line color codes are as follows:
Red or Brown wire = Live,
Black or Blue wire = Neutral/return,
Green or Green/Yellow = Ground, chassis.
RA17's are great Rx's, but the RF and IF alignment is a task to be avoided if at all possible = A case of if its not broken, then don't fix it !! It used to take a full working week to align them properly (minimise all the spurii). The main problem was getting rid of the signal breakthrough at the 1 MHz points = the extreme ends of the scale. Very few RA17's are Free of that 1 MHz spurii. Its not often one needs to listen at the 1 MHz spots so its no real problem.
What you can check is that all the screening panels on the underside are properly in place and the contact fingers on their edges are making good contact. When correctly fitted they keep most of the spurious gremlins where they should be.
The Rx works on a principle known as a Wadley Loop (originally developed by a South African engineer - forget his name). It is a pre synthesizer and works remarkably well.
I hope you enjoy it. You will find that the wide bandspread tuning makes it appear there is more space between signals than there actually is.
If you have and questions about the above please e-mail me, I will do my best to help, but it's 45 years or so since I used to maintain RA17's.
73 de Denzil, G3KXF.

I'm considering a new car... probably another SUV. I've had a Ford Explorer and the overall motor noise (plugs & fuel pump mostly) makes HF operation almost impossible.

I'd like to hear from some others who have found an SUV with little or no motor noise. I'm especially interested in hearing (good and bad) about the Dodge Durango and the Jeep Grand Cherokee Laredo. I'm looking at V8 motors.

Please EMAIL reply to ed@juge.org.

Thanks.. Ed, W5EJ

Well, as I learned the hard way awhile back there are two JOEs out there whose name and whose call suffixes are JOE. Both sell used ham gear. One is anti-new-Extra and the other one is sort of a Maalox moment of an email "buddy", but a pretty good guy nonetheless. He isn't a big multinational operation, either. He makes sixth-grade spelling errors all over his web page, and he probably operates out of a fraction of a garage. But he is an honest working man, and he doesn't have an attitude about hams who were unfortunate enough to upgrade after 15 April 2000.

I'd recommend that you go back carefully over your notes and see which is which. Boycott the bad one, but don't let the other one get hurt by sharing the same name and ham suffix. Buy lots of stuff from the good Joe and tell him old "Doggie-poo" sent you by.

I made the same mistake you are, and I owe him at least that much.

^^^^^^^^^^^^^^^

Sounds like it needs a set of final tubes. I can sell the S2001As out of
my 520S parts radio, they were in good shape last time I used them to transmit.

Mike, I have looked in amazement at all these postings, I have never seen the like of misinformed people, they are all untitled to their opinion, no matter how wrong and misguided they might be, but I can not let your LIE go unchallenged. First of all I am not linked to a business, I am a Ham in Little Rock, AR. Call is K5JOE. I have registered a Domain name of Hamtrader.cc because of all the flack people like you were giving me confusing me with K7JOE after the Slow Code Lid posting he made. If you are to keep any kind of credibility, you will check out your facts before you accuse anyone of something they did not do. Mike do you have enough character and honesty to say here that you are wrong in your bashing of me, K5JOE, instead of K7JOE, or do you just not let the facts stand in the way of a good story that you can post on these news groups just to see your false accusation in print!!!

I apologize to the readers of these news groups for all the false accusations directed at me that got all this started, but I am NOT K7JOE, I am K5JOE, NOT A BUSINESS, JUST A HAM THAT LIKES TO SWAP AROUND AND GET DIFFERENT EQUIPMENT. If Mike does not correct his bashing of me thinking I was K7JOE then all will know that he was just put up to this by his buddy Bobo or Bodu or whoever started all this.

I have four UPS's from APC, two power my computer network, and two power my ham gear. No problems with RFI whatsoever. These are "Smart UPS model number SU2200NET". I'm not sure how the smaller ones will work, but the APC line in general is about the best UPS on the market.

3510. HF noise, Ford Explorer

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-24 00:00:00 UTC
From: Scott Currie <scurrie@us.ibm.com>
Message-ID: <397CC3B1.D490DFCE@us.ibm.com>
Source record: 74995
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi Gang,
Has anyone had an success removing the fuel pump noise in late model Ford products? I have a 1998 Merc Mountaineer (same as Explorer) and installed a IC706MIIG. The noise on 20M runs around S7-S9 and drives the AGC down to nothing. Pulling the fuel pump fuse kills the noise (and the engine a few seconds later), so I know that is the source. I took it to Ford and had them install the "fix" that is covered in a TSB. If it made any difference at all, I can't tell. I was thinking about bypass caps on the leads as they leave the tank, but I'm not sure what values or if this is even a good idea.

Any suggestions?

Thanks,
Scott, KJ7QY

Like the man said, "I don't have a solution, but I REALLY admire the problem".

Capacitors by the gas tank? Hmmmm... I have thought about having my ashes placed into orbit, but those plans were for AFTER I died of natural causes.

Seriously, if anyone has an answer to this, please post it. The interference even messes up distant AM stations on the radio. Also, does anyone know if this does anything to VHF FM? Intuitively, I'd guess not, but I've Ass-u-med things before, and assumption is the mother of all screwups.

From: Chris <c279m@yahoo.com>
Message-ID: <lh5f5.415$u.16493@news1.news.adelphia.net>
Source record: 74871

Does anybody know what I can do about the battery with his handheld? It's a Nicad model BP-173 but it's talk/standby time is horrible! I used it for talk-in at a local hamfest and it died within a few hours on low power. Is there a better battery out there for this radio? I also heard that Icom makes a battery case for this HT that uses AA batteries. How is the performance of that pack? Any help on this battery issue would be great.

I also did a search for mods for this HT and found a site that had a mod for just the IC-T7. Would that mod work on this rig? Any others out there other then freeband?

Thanks for your help in advance.

I find your comment difficult to fathom.

Although there are a few cable compatibility issues we're working on,
when the units are set up with proper cables, they are great sounding -
at least according to the scores of first-hand reports that I have read.

Could you please be a little more specific about your findings?

From: robh8304@my-deja.com
Message-ID: <8lisn2mgv1@nnrp1.deja.com>
Source record: 74876

"The Eternal Question"
Question: How many Hams does it
take to change a light bulb?

Answer: 1,200

1 to change the light bulb and to post to the mail list that
the light bulb has been changed;
14 to share similar experiences of changing light bulbs
and how the light bulb could have been changed differently;
7 to caution about the dangers of changing light bulbs;
27 to point out spelling/grammar errors in posts about
changing light bulbs;
53 to flame the spell checkers;
41 to correct spelling/grammar flames;
6 to argue over whether it's "lightbulb" or "light bulb"
156 to write to the list administrator about the light
bulb discussion and its inappropriateness to this mail list;
109 to post that this list is not about light bulbs and
to please take this email exchange to litebulb-list;
203 to demand that cross posting to grammar-l, spelling-l and
illuminate-l about changing light bulbs be stopped;
111 to defend the posting to this list saying that we all use

3532. TS-520SE rules!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-25 00:00:00 UTC
From: Asmel Colina <asmel@telcel.net.ve>
Message-ID: <Vw8f5.591$f74.110@news01.t-net.net.ve>
Source record: 74885

I'm a young Venezuelan that want become a HAM in the next weeks, my father was a HAM operator (YV1DOG) and he makes to me the best gift that i never had recived a complete station a TS-520SE, whith a DG-5 (digital display) a SP-520 (speaker) a AT-420 (turner) in mint condition... and i'll tellyou something, with these combination i got the most terrific station for any starter in HF. And even is capable of transmit on 2 meters -with a TV-502 transverter- or 54Mhz. -with a TV-506 transverter- a concept that is "new" in today standards (..a HF + VHF). If you want high stability and precission just add a VFO-520. This rig have and may exeed all the things that you need to get start your HF station...
-USB, LSB, CW
-200W PEP in SSB, 100W on CW
-Stability of 100 Hz per 30 min. after warming

Like says Kenwwod's advertising in the 70's:

"As a TS-520 owner, you go on the air with a sense of pride and confidence. Thousands of these precision-built beauties are in operation all over the world ...in HAM shacks, field day sites, in DX and contest stations and in coutless mobile installations. No other rig has ever the performance, dependability, versatility and value that is built into every KENWOOD TS-520.
It lets you go on the ari almost anyplace with its built-in 110/230 VAC and 12 VDC power supply. The TS-520 employs two rugged, time-proven S-2001 (equivalent 6146-A) final tubes which are known for long life and superb linearility.
You have certainly heard the TS-520's clean signal on the air and have probably heard a lot of glowing praise by other hams. So if you don't already own a 520, maybe it's time that you did."

Here in Maracaibo the RCV -Radio Club Venezolano- (YV1AJ) thath are in the CQDX Honor Roll since i've memory, had won many contest, all this with a TS-520S, without linears or any "extra help".
So, maybe in the future i'll buy new equipment but one thing is sure...
I'll keep my TS-520SE.

I purchased on of the Pryme Speaker / Mics today for my old Icom IC2AT and it works great. The audio output is a little on the tinny side but what do you expect from such a small speaker. The transmit audio was excellent. Not bad for a $20 speaker / mic combo.

The TUG-9 was a six (6) wire mic, which could be set up for electronic or relay switching, depending on the combination of wires used, and generally worked on most radios.
The TUG-8 was a four (4) wire mike with a switch in the bottom that accomplished the same thing but was not always compatible with all radios.

Scott,
I don't have any idea what Ford's 'cure' is, but the GM 'cure'
is exactly what you thought. By-pass the fule pump's power lead
at the gas tank. A 0.01 ceramic disk at 35-50 volts should do it.
If not, add another one or two. Ferrite beads won't do it alone,
but can't hurt with the caps.
As far as worrying about the caps near a gas tank, why bother?
I'd be more worried about that 12 volts going to the pump shorting.
'Doc

I have in good condition a Collins 212Z-1 Remote Amplifier. This is a solid state, 4 Channel AC or Battery operated portable in a case used for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a great addition to any station. $395 each plus shipping.

You have to be sure to take proper precautions, lock out the circuit at the breaker, and utilize a OSHA-approved ladder. Wear gloves and grasp the bulb gently but firmly. Be sure and turn the bulb in the proper direction when installing: clockwise north of the equator, counterclockwise south of the equator.

Hope this helps other bulb-changers.

Scott.

Actually both Ford and GM have fixes for this problem. You have to find a good Service Manager to do some digging in their tech manuals but they are there, work and are available.

From: barracuda_1969@yahoo.com
Message-ID: <397D4870.57082146@yahoo.com>
Source record: 74894

Hello:

I have been out of Ham radio for about 18 years and think about getting back in. I will soon have a General ticket (Pre 1987 Technician upgrade) and will upgrade to Extra by the end of the year...

What is a good rig to start off the HF bands/voice? I only have 2 main requirements: less than $1,000 and it has to work with an antenna that I can put in the attic of the house (Covenants prevent a 'real' anntenna).

Used rigs are OK, what do you recommend?

Are there any good review web sites out there? Ones that compare actual specification instead of impressions?

TIA

While the small Prymes are good for attaching to clothing when walking a hamfest or something, IMHO they're a little too small for prolonged operation. The new full sized models address this issue nicely. If you occasionally rag-chew with a small HT like the Yaesu VX5, your thumb will appreciate this microphone.

For Auction:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=391292412

A RARE FIND!! Unassembled Heathkit HO-13 Ham-Scan Panoramic Adaptor, designed to provide spectrum display (a visual display of received signal amplitude versus frequency) when used in conjunction with amateur band and general coverage receivers. The continuously variable frequency width (30 khz to 100 khz) is centered on the intermediate frequency (I.F.) of the receiver. Useable with any one of the following I.F. frequencies: 455, 1600, 1650, 1681, 2075, 2215, 2445, 3000, 3055 or 3395 khz. Uses 3" CRT display. Weighs 11 lbs. Brand new, unassembled kit in original factory carton, complete with assembly/instruction manual.

3549. Icom vs Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-25 00:00:00 UTC

I'm considering buying either a Icom 746 or Yaesu 920. I've read some feedback on the 746 but was wondering if anybody can share their thoughts/concerns on the 920. I know the 920 just covers HF and 6 while the 746 covers HF, 6, and 2, but that's not a big deal to me.

Subscribe to QST, then you can go to the arrl.org web site, and access
their reviews of rigs going back to the early 80s.

I believe the best 'bang for the buck' rig available today is the Yaesu
FT-840 - 100 memories, current model radio, stable as a rock, small enough
to be used base/mobile - easily mod'd for MARS, great QST review, etc....

They run about $500 (used) for the radio, filters and such are usually a wee
bit extra.
(I've got two of 'em - one in the mobile one in the house :)

Just an opinion.

========
At Least 14 hams are required to change a light bulb.
A committee of 5 DXers to determine if it counts as a light bulb
A contester to read its serial number for contesting
An ARES guy to determine if the relpacement is ARES Approved
A certified electrician/ham to turn off the power
Two tower guys to climb the Light Bulb tower
A commitee of 4 product testers to determine if the replacement is
within specs
ETC

Hmmm.....does your father want ANOTHER son?? <<sonrisa>>

Que suerte! El TS520 es un radio excelente. Con los transvertores puede usar
6M para comunicaciones internacionales, y 10M es "caliente" ahora. Un amigo
mio de Caracas usa un dipole, nada mas, y esta en contacto con un otro amigo
mio en el DF en Mexico...usando solamente 50 watos SSB. Espero la posibilidad
hablarle en 6M!

Source record: 74908

All answers are correct. Modern radios seem to come with better stock filters or now have IF DSP. But older radios can be refitted with better filters and outboard audio DSP can be added to any radio. The best reason would be the options the AC6V listed. I have 3 HF rigs. A Ten-Tec Paragon (1990's), a pair of Kenwood Twins (TS-520 vintage radio)(1970's) and a boatanchor station station consisting of a Hallicrafter SX-101A and a Heathkit HX-20(1960). All work fine, but for a big contest, only the Paragon has enough filtering for the volume of stations on at once. The SX-101A runs a close second but the R-599 receiver just needs the 2.5KHz filter replace with something narrower (1.7-2.0KHz) to be competitive with the Paragon. IF shift and notch filters can make the difference in a tough situation which again the SX-101A and the Paragon has and the R-599 does not.

While a TS-950 would be ideal, some of the midline radios might be a more attractive choice. TS-570, or one of the equivalent from Yaesu, Icom, or some of the newer competitors.

The TS-520, and it's big brother the TS-820 are rock solid, competition grade radios. They were, and sometimes still are, the choice of contesters and DXer's.

So, the questions are-

What do you want?
How much money do you have?
How much money to you want to spend?

Greetings,

I just went thur the same thing. Just about everyone I talked to
claimed
the 746 wins hands down. Just about the only thing about 920 that
turned
my head was the voice keyer. But there is a lot of software that will
do that
now, so it's not such a big win.

I have had my 746 now for about 2 months and I love it. I was told that
the band scope was a gimmick. It is not! True it isn't as nice as
having a real time scope, but I use it all the time. It is great
for those pile ups where they say listening 5 to 15 up.

The short answer is no one told to buy the Yaesu and all said that
the 746 was a great radio. Buy the 746, you won't be sorry.

Welcome back,

As for a good rig under $1000, if you don't care about operating the WARC bands, you can find some very nice Heathkit HW-101s with power supplies for about $200. You'll need an antenna tuner, most likely, in order to load it into a wire in your attic. That will set you back another $100 or so. Save the $700 for buying QSL cards and postage (hi).

Mike:
I have a Kenwood R-5000 receiver. Remember that a noise blanker is not supposed to have any effect on static type noises. It's ONLY effective against repetitive type noises such as auto ignition noise. Try it on that kind of noise and you will see a dramatic effect. MY R-5000 (and maybe your 820) has two NBs. The other is designed for the old Soviet 'woodpecker' over-the-horizon radar systems. We rarely hear those anymore. I think the NB is one of the most misunderstood circuits available on HF radios.

3580. Torroid probs...

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-25 00:00:00 UTC
From: TC Dufresne <tdufres@radiks.net>
Message-ID: <sMsf5.4241$c04.566717@nntp2.onemain.com>
Source record: 74933

I am having a problem with torroid
transformers. I am winding bifucated transformers on a T37-43 and t50-43
cores. I keep getting shorts! I have winded, no kidding, over 2 dozen times
with similar results. What could I be doing wrong?
Suggestions tried and failed...
1) Coat with epoxy to "round" edges of core. Good idea, but how do I get the
coating even? It "goops" up on the edges and leaves little in the center,
which I think may be the prob
2) File it down-ugh! what a mess! Lots of little iron filings around and my
hands are a mess.. No help
3) Wind it with tape/teflon tape/masking tape..
No way! Way too small!
4) Wind by hand, check continuity in wires before winding core OK before,no
shorts, but after winding very carefully, same results... SHORTS!!!
What are my alternatives here? I have tried smaller wire (#26) same results.
Seems I had no probs when I did my FB 40 transformers. Could it just be bad
enamel wire? I just got the roll from Ocean Electronics today....Could I use
a steel core wire like what they use for making beads?
Perfect size (#24), and insulation looks like enamel.
Could I dip the mag wire in wax or something to make it more "slippery" so
it won't snag?
Could I coat it with a coat of varnish?
Could I stand on my head and spit nickels?
(SRI, got frustrated,,,)
HELP?!?!

Hi Everyone,

I really need a schematic diagram for the TSU-3 if you could check your user manuals I'd appreciate it. This is the CTCSS unit from kENWOOD TH-405 and TH-205 HTs.

Thanks much in advance

Regards,
Frank K9IC

3588. Re: Duplexer's tuning

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-25 00:00:00 UTC
From: Keith McQueen <kb7m@arrl.net>
Message-ID: <397e449c_2@news.sisna.com>
Source record: 74941

Unless you have the proper equipment, such as a spectrum analyzer with a tracking generator, the $100 is probably worth it.

I tried tuning a set of duplexers with just a signal generator, but was amazed how far off I was when I actually got a chance to put it on an analyzer.

It can make the difference between a repeater that works well, and one that "kind of sort of works".

From: Dan <dano@truvalue.com>
Message-ID: <8lnpehrf1@news.xmission.com>
Source record: 74699

Hi David,

Kenwood is the only one I know of. It's the TH-D7A(G). Has a 1200 and 9600 baud AX.25 compatible tnc built in. Connect 3 wires onto a 2.5mm stereo plug and you've got a radio that is programmable AND controllable from the pc. You don't need any type of converter box like the bigger rigs. I've got one and it's a nice little radio. Not at all what I expected.
I was surprised to see how many of the regular AX.25 commands were built in. Of course, there's no mailbox, but who cares? That's what the home station is for...

Kinda pricey, but it's worth it.

Once you know what size, you may be able to acquire some hex rod and
make your own allen wrench.

Or you could weld an extension onto a purchased wrench.

Try here

http://www.decibelproducts.com/netscape/default.html
http://www.decibelproducts.com/netscape/about/technical-info/technotes.htm

http://www.remecwacom.com/

This is two of the duplexor makers. They have info on their products.

If you have the proper equipment you basically tune the pass cavties to
pass the frequency, then anjust the rejection notches if you have the
banpass/reject type.
YOu could have just a notch type and you just adjust the cavities for
the best rejection. Just be sure to terminate the unused ports with a
good dummy load and not to fire up a transmitter tuil the duplexer is
adjusted.

Source record: 74702

FOR SALE:

ICOM IC-R8500 Professional Wide-Band Communications Receiver

Frequency Coverage:
0.10000 - 823.99999 MHz
849.00001 - 868.99999 MHz
894.00001 - 1999.99999* MHz (*guaranteed: 0.1 - 1000 and 1240 - 1300 MHz)
Mode: SSB (USB,LSB); AM (Normal, Wide, Narrow); WFM; FM (Normal, Narrow); CW (Normal, Narrow*) (*optional filter required)
Number of memory channels: 1000 (plus 20 scan edges and 1 priority channel)
Antenna connector:
Below 30 MHz: SO-239 (50 ohms/Phono [RCA (500 ohms)])
Above 30 MHz: Type-N (50 ohms)
Usable Temperature Range: -10 C ~ +50 C; +14 F ~ +122 F
Frequency stability (in FM mode):
Below 30 MHz: 100 Hz (optional 20 Hz)
Above 30 MHz: 3 ppm (optional 0.6 ppm)
Tuning steps: 10, 50, 100 Hz; 1, 2.5, 5, 9, 10, 12.5, 20, 25, 100 kHz; 1 MHz or programmable (0.5 - 199.5 kHz/0.5 kHz steps)
Power Supply Requirement: 13.8 V DC 15% (negative ground) or 117/220/240 VAC (with AD-55/A/V)
Current drain (at 13.8 V DC):
Standby: 1.8 A
Maximum audio output: 2.0 A
Dimensions: 287(W) x 112(H) x 309(D) mm; 11.3(W) x 4.4(H) x 12.2(D) in
Weight: 7.0 kg; 15.4 lb.
Receive system: Superheterodyne
Intermediate frequencies:
1st: 48.8 MHz (0.1-29.99999 MHz); 778.7 MHz (30.0-499.99999 MHz); 266.7 MHz (500.0-1024.99999 MHz)
2nd: 10.7 MHz (0.1-29.99999 MHz); 10.7 MHz (30.0-499.99999 MHz); 10.7 MHz (500.0-1024.99999 MHz)
3rd*: 455 kHz (0.1-29.99999 MHz); 455 kHz (30.0-499.99999 MHz); 455 kHz (500.0-1024.99999 MHz) (*except WFM)
Sensitivity (typical):
Frequency band (MHz) SSB/CW AM AM-N AM-W FM WFM
0.1-0.49999 1.0 V 6.3 V - - - -
0.5-1.79999 2.0 V 13.0 V - - - -
1.8-1.99999 0.25 V 3.2 V 2.5 V - - -
2.0-27.99999 0.2 V 2.5 V 2.0 V - - -
28.0-29.99999 0.2 V 2.5 V 2.0 V - 0.5 V -
30.0-999.99999 0.32 V 2.5 V 2.0 V 3.2 V 0.5 V 1.4 V
1240.0-1300.00000 0.32 V 2.5 V 2.0 V 3.2 V 0.5 V 2.0 V

Squelch sensitivity (threshold/tight):
1.8-29.99999 MHz:
SSB, CW, AM-N: 10 &#65533;V/320 mV
AM, AM-W: 0.5 &#65533;V/320 mV
28-29.99999 MHz:
FM: 0.5 &#65533;V/320 mV
30-1000, 1240-1300 MHz:
FM, AM, AM-W: 0.4 &#65533;V/320 mV
WFM, SSB, CW, AM-N: 4.5 &#65533;V/320 mV
Selectivity:
WFM: More than 150 kHz/-6 dB
FM, AM-W: More than 12 kHz/-6 dB
AM, FM-N: More than 5.5 kHz/-6 dB
AM-N, SSB, CW: More than 2.2 kHz/-6 dB
Spurious and image rejection ratio:
1.8-29.99999 MHz: More than 60 dB
30-1000/1240-1300 MHz: 50 dB (typical)
Audio Output Power (at 13.8 V DC): More than 2.0 W at 10% distortion with an
8 ohms load.
IF shift variable range: More than &#65533;1.2 kHz
External speaker connector: 2-conductor 3.5 mm (1/8 in)/4-8 ohms

Purchased brand new on May 31, 2000 (will supply original receipt showing I paid: $1458.00). Radio is "as new" condition! Complete with original carton, manual, power supply, AND factory warranty!

Asking price is: $1000.00 firm. If I do not sell it by Monday, July 31, I will be posting it on Ebay for auction with a $1000.00 reserve.

Price does not include shipping...buyer to pay actual shipping, plus insurance. I will double box, for maximum protection.

Payment terms via PayPal, or U.S. Postal Money Order, in advance.

Thank you,

Bill Crocker
Warren, Michigan

the swan 500c i had (gave it to my father-in-law when he got his ticket) would drift like crazy the first half hour it was on, after it was good and warm, was pretty solid... i have talked with him several times and he sounds as good as anything on the air... the receiver is pretty noisy though...

Gary and others.....I send out the famous ' Visit www.ab7sl.com '
newsgroup message once in every 5 days. Don't you folks have anything
else meaningful in your lives to aspire to then to claim you are
'really tired of being spammed'? Besides according to FEDERAL LAW
spam is unsolicited - email messages - delivered to your email inbox.
The law makes no mention of newsgroup posts. You read plenty of
unsolicited newsgroup posts every single day. I think you better give
it up all together. Obviously this computing is just too much for you.

See the FAQ Page on my site for further info ......

3597. Info Needed-Tempo Digital 100 Freq Counter

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-26 00:00:00 UTC
From: jdm <jdm@iland.net>
Message-ID: <397FA0B2.8A2DDF5E@iland.net>
Source record: 74705

I recently came across one of these, and I would like to find a manual or copy thereof. It is a small desktop unit with Nixie tube display, and has the optional 130-160mhz converter, and made in Japan by the Mikeda Riken company. Probably made for industry rather than ham use but has the familiar Tempo logo. Can anyone provide me with a manual or copy? I thought I'd try here first before I look at the other options. Email direct if you can help, thanks.

Hi All,
Have a nice yaesu ft-900at for sale, a great radio with a very fast built
in tuner. and lots of nice features.
I have the seperation kit also.
Radio has not been mobile. Reason for selling is that I have other interest
at this time other than ham radio.
A good deal @ $700.00 plus shipping!!

I don't bother to change them. I remove the light, and carefully cut the bulb off.
Then I weld tungsten wire to replace the filament. After that I simply
melt the glass bulb part back on using a vacuum chamber.

>

One BIG reason why there are still a lot of them in use by many hams
is the radio has stood the test of time. THE TUBES I should
say....they will take a beating and keep on going. TUbes are far more
forgiving than on can believe.

Transistors will never be able to match the audio quality of tubes
anyway but that is another subject. My ear can hear the difference
and tube audio is beautiful!

Message-ID: <ZCsf5.2125$fd7.479696@dfiatx1-snr1.gtei.net>
Source record: 74804

My Yaesu 101ZD would work well for you - solid state except for driver
and 6146 finals - a real output tuning final stage that allows for
oddball antennas without need for external tuner or shutting the rig
down with high SWR, builtin AC supply, and 160-10 meters including
WARC bands. $375 plus shipping...

When you get tired of it, or want something newer.fancier, you will
get your money back out of it!

Don Johnson says that if the coil is above the roofline you will be OK,
so a bumper mount should be OK (That is what I use, tilted back a bit
so I can operate the hatch on my station wagon). You may be best off
with a Hustler quick disconnect, leave the mast on all the time and just
take off the coil when you go into the garage. A foldover mast may work,
but which direction can you fold it? Yes, you do need to run directly
to the battery, fuse both the negative and positive leads.

Source record: 74813

I'm thinking about buying a TS-50s for a mobile-only rig in a small car. (I don't need the VHF/UHF bands.) Those of you who use one, are you satisfied with it (in spite of any limitations that such a small rig may have)? Does it display the SWR while transmitting (as the IC-706 does)? I'd hate to try to find a place for an outboard SWR meter - sort of defeats the purpose of a small rig. MANY THANKS for your help. 73, Scott.

Sent via Deja.com http://www.deja.com/

Properly tuning a duplexer is a NON trivial job.

Having an RF network analyzer is an imperative and they are NOT cheap.

What really begins to bother me is that he is doing the same thing with his full coverage announcements on the dx packet cluster. If he doesn't stop that crap, someone is going to do something nasty. If anyone wants to see his web page they would already have done it by now, and if there is anything worthwhile to see, it will all take care of itself via the search engines. Guy must have some serious ego problem to want to advertise it so much; either that or he is making money on each hit.

Even with the proper instructions, you need the proper equip. Also a
little knowledge in the field of what you are doing, helps.

I don't think $100 is out of line, unless you bought it from him.

I have an APC Back UPS 600, and it operates fine near AM
broadcast-band radios -- a Proton, a CCRadio (an ultra-sensitive
AM-band radio with an 8-inch ferrite core antenna), as well as a
nearby JRC NRD-525 swave receiver. Haven't tried it near a ham
transceiver, tho'... (The APC 600 is one of the more expensive UPS
deals; it cost around $300, and has a rather heavy built-in battery.)

I am using a Glen Martin Engineering tower. It is 8' -- very nicely built. Rotator is mounted inside. I have a KLM KT34A on it and above it a 17 el 70cm and a vhf/uhv log periodic. Has survived 4 hurricanes so far (knock on wood).

I bought mine at AES -- they have a heavy duty 9' tower as well, but the 8' certainly works fine for what I have.

cheers

Don't most of these devices measure voltage and use an assumed
voltage against capacity curve? The way that most nicd capacity
meters are made is with a zenner diode in series with a voltmeter,
however without looking at the circuit for the clone that I made
of the HiTek capacity meter I cannot remember what value you
assign to "full" and what value you assign to "empty".
I did some tests and the results were linear over the interesting
range.

STRICT LAWS URGED FOR NET STALKING

SACRAMENTO -- Federal and state laws should be strengthened to help curb the growing problem of online stalking, a U.S. Justice Department report recommends. Internet service providers, which link users to e-mail and the World Wide Web, report a growing number of complaints about harassing and threatening behavior online, the report said.

Honolulu Advertiser, 9/16/99

The Illinois State Attorney of Cook County, has proposed legislation prohibiting harrassment or threats on the Internet. From the reported proposed penalty, threatening or harrassing via the Internet would be a Class 4 felony in Illinois, punishable by up to 3 years in prison. The state legislature has not yet considered this proposal.

ajax12@my-deja.com wrote:
>Those of you who use one, are you satisfied with it

I've used my TS50 mobile since I got it in 1994. It has really been beat up including being dropped. I have it mounted on *top* of the dash in my SUV so that I don't have to take my eyes very far off the road when operating it. The Arizona summer sun heats it up to the point that it is too hot to touch when parked, but still no problems. It is a very tough and reliable rig.

>I'd hate to try to find a place for an outboard SWR meter -
>sort of defeats the purpose of a small rig.

The TS50 does not have an SWR display. I use the matching AT50 auto-tuner (mounted under the seat) and just push the tune button...

Another drawback of the TS50 is that the faceplate is not removable. With modern rigs that have that feature it is much easier to mount the faceplate high up on the dash where it is more convenient and safe to operate.

If you operate CW mobile as I do, the TS50 has no internal keyer. It requires and optional CW filter, and the sidetone cannot be adjusted for level without removing the case. This is *not* a CW friendly rig.

I would not buy it again today for the above reasons. Why did I buy it in 1994? It and the Ten Tec Scout were the only two small HF rigs on the market, Ten Tec had a 4 week waiting period, and I couldn't wait. As it turned out the Scout had some bad CW problems of it's own so I guess luck made the best choice for me...

3639. FS: Mint Kenwood TS-520SE

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-26 00:00:00 UTC
From: dsjkallen@aol.com
Message-ID: <20000726132010.26192.00000464@ng-bg1.aol.com>
Source record: 74835

I have an "as new" TS-520SE for sale. The rig was purchased as a back-up for my TS-520S, but was only used sparingly since acquisition. The rig is immaculate, both electrically and aesthetically.

As a professional RF technician (since 1965), I've just completed a receiver and transmitter alignment, as well as replacing the finals with brand new 6146Ws. Full 100 watt output on 160m thru 10m. Receive sensitivity is less than 0.25 uV for a 10:1 S+N/N ratio. And, the S-meter has been calibrated for 50uV per S-unit as per spec. The S-meter is linear showing 50uV per S-unit, thru S-9.

The rig comes with the original owner's manual. Actual shipping/insurance charges will be applied. The TS-520SE is heavy (around 40lbs.), so one should take into consideration shipping costs. I will double-box the unit and take appropriate care to ensure no shipping damage. Buyer decides on which shipping method is preferred, and I will then calculate shipping costs. No cost will be applied for boxing, bubble-wrap, and foam peanuts. NOTE: Prospective buyers can also calculate actual shipping costs by going to the FedEx, UPS, or USPS websites, inputting the weight (40 lbs.), and the buyer's zip code and my zip code (61802).

$300.00, plus actual shipping charges.

73,
Don Allen W9CW
Urbana, IL 61802

3642. FS: ATLAS 350XL transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-26 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <397f3301.1066485@news.pipeline.com>
Source record: 74838

Fore sale, an Atlas 350XL transceiver in very good to excellent
condition. Cosmetically it's around a 9 out of 10. The only
imperfections are some small scuff marks on the front panel trim ring.
Front panel is perfect and the case is almost perfect.
I've gone thru the rig and have done some minor repairs and
an alignment.

It has the digital readout, CW filter, full QSK, 350 watts PEP input
power with a maximum of 160 - 200 watts output. Requires a 35 amp
12 volts supply since maximum key down current is 32 amps.
A suppl;y is not included. It comes with a W7FG manual copy.
$350 plus shipping.

73,
Doug/WA1TUT

Source record: 74839

It's gets worse than that. You really need a GOOD receiver. Most
repeater builders would only consider
top of the line Motorola or GE radios. Most under $500 import radios
won't hack a
mountain top RF enviroment. You need adjacent channel and intermod specs
of
85 to 90 db to have a good receiver.

I am going to be taking my license test on Sunday at a hamfest. I am wondering what kind of radio I should look for to start out with. Should I get an HTX-202 or something along those lines or something newer with a lot of features? I need something that will not be too expensive on the used market but will be a good solid preformer. What should I get or should I wait till I get some catalogs from suppliers? Thanks!

BTW, I have bought stuff at hamfests before so I know what to look for and what to stay away from, usually.

3646. Kenwood TS-930SAT HF transceiver $400

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-26 00:00:00 UTC

I have a Kenwood 930SAT with the built in antenna tuner. It looks good and works well except it has a bit of distortion in the transmit audio when the processor is off. I got it as a trade in. Comes with handmike and original manual. Good buy for $400. 73 VE3NGW/W4 Florida

I have in good condition a Collins 212Z-1 Remote Amplifier. This is a solid state, 4 Channel AC or Battery operated portable in a case used for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a great addition to any station. $375 plus shipping.

I won't comment on the encoder but the lamp replacement is a piece of cake.

The lamps are 28 Volt with leads. Get a couple for a buck or so at your local parts house and put them in. You take off the top cover and they are right on top, pushed through a pair of grommets behind the meter.

3657. dj-v5 AA charging mod

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-27 00:00:00 UTC
From: Zsylvan+noZs_0007@cyberhighway.net
Message-ID: <8lnueqdmr1@news.cyberhighway.net>
Source record: 74709

Any knowledge why the Alinco DJ-V5 AA battery case says to not use
NiCads? Short life? No short circuit protection on the terminals?

Anyway, I'm using 1400mah NiMH cells in mine, and they work well. But
of course I have to take them out to charge them. Or do I? No!

The radio has three contacts for the battery pack. It appears the
middle is the minus (-) terminal, while the other two are positive
(+). The voltage can be measured by running the radio on external
power. One of the + terminals does not supply any current (e.g. try
drawing 5ma for an LED), the other does. The AA pack only makes
contact with - and the no-current +. According to the schematic, the
no-current + has a series diode, probably to prevent charging
non-rechargable AAs when using the AA pack.

Looking at the battery holder, create a U-shaped foil strap the right
size to just cover the missing contact and the existing + contact while
not touching the center contact. Make certain to avoid connecting with
the center - contact. Use tape to hold the foil in place but do not
cover the contacts. Now the radio will contact - and + and charges AAs.

WARNING:
I disavow any and all responsibility for your broken radio
charge only rechargable NiCad or NiMH cells
do not short your battery pack
you are on your own
do not do this mod unless you take full responsibility!

I wonder how much transmit power I get with 4.8v to 5.2v?

Well, Gary, the two articles mention "threatening behavior online." Your
comment, "If he doesn't stop that crap, someone is going to do something
nasty" comes across as a very strong online threat, something both
articles speak out against. Just what were you planning on doing to
him? (Hopefully, you're not in Illinois!) 73, Jeff KH6O

Call it what you want to. I'm not splitting legal hairs here. You have repeatedly posted full announcements on the dx packet system to invite net users to your site. Judging from comments within the system, other folks are iritated as well. I've seen the web page and you have some interesting stuff there, but I don't enjoy being reminded of it as much as you enjoy reminding ME about it. DX clusters are intended to convey timely information on that topic. General announcements are made my participants to gather information or to share timely knowledge relevant to DXing. Advertising, in any form and by any other name, is not highly appreciated. Spam is spam.

3670. bizarre ic207h problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-27 00:00:00 UTC
From: dave@hotcha.riesz.net
Message-ID: <slrn8nulk5.f6b.dave@hotcha.riesz.net>
Source record: 74722

Greetings. I'm experiencing a strange problem with a mobile installation of an Icom 207H. I have the rig mounted in the back of my car and the faceplate and microphone in the front. Previously, the microphone was connected to the main unit with 20 feet of CAT5 cable. It worked well, even if it did look rather ugly.

There is an RJ45 connector beneath the front armrest which is wired up to a DB-25 connector in the back, near the main unit. With a little probing and fiddling, I figured out how to wire the DB-25 connector to he microphone input. So, now the microphone is connected to the radio through the car's wiring.

The problem with this new setup is that when I key the transmitter, it keeps transmitting after I release the PTT button. The only way to get stop TXing without turning off the rig is to disconnect the microphone. Setting the radio to use a lower-power mode seems to help. It seems that (maybe?) the transmitter is causing RF interference in its own microphone-control line.

Has anyone else experienced this kind of behavior with this or any other radio? Is there an appropriate solution?

Thanks in advance,
Dave Riesz

I have been given a loan of an Icom 730, it will not TX. The radio condition is rather suspect, loose screws etc. on my first inspection, I found one wire of the ALC socket at the output socket on the back. I also found on one pcb, both pins of a push on plug were dry jointed, the pins flopping about in the pcb. The loose pins did not make any difference to the RX. When I key it, the fan on the output case starts, I hear relays click but no output is readable. Another indication is the PSU, when I am reading amps from RX to TX the indicator rises by only 2 amps. I hope to get the schematics soon, but till then can anyone tell me if this radio is prone to TX problems. How can I test the Final transitors.

3674. Schematic needed-Silvertone #4559

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-27 00:00:00 UTC
From: jdm <jdm@iland.net>
Message-ID: <39801FFD.9D6F2140@iland.net>
Source record: 74726

I am in need of a schematic for a Silvertone radio #4559. The schematic in Ryders also covers # 4419, 4519, and 4459. I found the Ryders schematic on-line but I just cannot read it. It is listed under Sears Roebuck. Anyone out there make me a copy?
The only problem I see is a inductor connected to the main tuning capacitor is burnt. It has the number 14821 printed at the top of the coil form, looking for one of those also. After a recap it will be a very nice receiver. Please reply direct if you can help me, thanks.

I would start with a mobile rig. HT's don't have enough power to do much.
You can bring the mobile inside till you get a second radio. You can
usually pick up antennas cheap at fleamarkets. I would start with a new
radio till you get use to the equipment available.
Buy a Dual Band if your budget allows. You will need a power supply and a
second antenna for using the radio in the house.

Good luck,

Barry D.

I know a couple of people that use one and say they work well. Radio Shack usually puts them on sale for 299.00 from time to time. They are a basic 2 Meter mobile radio. Not sure which company is making it for them when I asked the salesguy said he didn't know.

Thanks for the help.73 Bill I know a couple of people that use one and say they
work well. Radio Shack usually puts them on sale..... They are a basic 2
Meter mobile radio. Not sure which company is making it for them when I...."
THEY are made in Korea by Maxon. While they are "OK" , take a look at
some better radios at lower cost. For example, The Yaesu FT-1500 & Alinco
DR-140TQ. Both are 50W ALpha-numeric (HTX isn't) have more memories, lighted
keys mike(Yaesu) etc....for under $180. The ADI 147 is a 60W mobile with
lighted mike at about $199 & Kenwood & Icom also have similar priced full
feature 2M mobiles, I would skip the Radio shack unit if you are planning to
buy new...
asked the salesguy said he didn't know.

Radio Shack markets clamp on EMI filters witch may help since I suspect the noise is being radiated by the cords.

Hi, www.eham.net has a lot of reviews on ham radios, 2 on the radio
you are looking at:
http://www.eham.net/reviews/detail/358

I just purchased a yaesu ft 1500m and have to say it's an awesome
radio. power output 5 10 20 and 50 watts. Built like a tank. Every
feature you could ask for. Check out the reviews on the website above.
Regards, Doug KB2KZT

Stupid comments about the value of your station and computer aside. How is it possible for the USPS to sell IRC's (I just bought 10) and not honor them? As I understand it, an IRC is only good for the least expensive (ground) postage. Is that what you requested?
Steve.. AI7W
Matt Erickson <kk5dr@hotmail.com> wrote in message news:397E2B7C.91EAE89@hotmail.com...
I know this is not on subject for the group, bare with me a moment.
I recently received an I.R.C., International Response Coupon, from a ZL1
Much to my dismay, the local USPS office refused to honor it, saying."We don't recognize this as a official document." Even after a call to the regional manager of the USPS, I received the same response.
This annoyed me a little, because return postage was over a $1 for a simple letter, which I really didn't need to send.
Lesson learned: I will no longer except any IRC's from any country, I can ill afford the return postage.
I'm not sure if this is only the case with ZL- IRC's, but I'm not willing to take the chance anymore.

Is the cable shielded? If so, is the shield connected to the radio ground & isolated from the vehicle body? If the shield is not grounded (or not present) this might let RF get into the mic cable and keep the PTT keyed.

I absolutely LOVE my TS50!

I bought it off the newsgroups for a song, and I can work great DX with it from the cab of my pickup. Using a set of pre-tuned HamSticks with quick disconnects, I don't even worry about SWR! I also don't believe in autotuners, because you lose so much power in the matching process (makes a good space heater, though!). I much prefer tuned, resonant antennas, even if they aren't the normal length. I also do not believe in trying to play around with tuning the rig while driving because of the distraction.

If you get one, just make sure you check inside where the final output gets wired to the SO239 connector. Since the connector is mounted to a flexible back plate, all the flexing during driving will eventually stress the solder joint and crack the connection, causing a very annoying intermittent. I soldered a bigger loop of stranded in place and it works fine since then.

Don't pay more than $550 used, though.

Unitrode (TI now) makes a chip for this function, but I have not been able
to track down the details so far.

I am interested as well. Some NiCads have such a flat curve at the 4.8 volt
value that it limits the accuracy of assessment by voltage.

I'm planning a trip to Europe this fall, and would like to take along
an HT that can access the two meter and 440 repeaters in Switzerland
and nearby countries. I'm thinking about getting the Radio Shack
HTX-245
(http://www.radioshack.com/ProductCatalog/ProductDetail/Index/1,2098,CTLG_1_1901106,00.html),
but want to make sure that it will be able to access those repeaters.
I understand some European repeaters require a "tone burst" in
addition to the CTCSS sub audible tones. Is this correct? Does it look
like this radio has that capability? I would appreciate any
information that anyone could give me about this.

Joe,

I installed this tower as well as the TX-472, US Tower, NEW. The side dimensions at the top near the rotor plate location are too narrow for the T2X TailTwister or similar rotators, I used the 2" reinforced masts of 15' & 20' respectfully, with trust bearings. The construction is OK, but not near the quality of the HyGain or Tristao older towers. If you are interested, I have a HyGain HG-54HD, excellent condition (down) with thrust bearing and rotor plate and new factory base for sale. Just my experience with some of the 9 or so towers I have installed and used over the years.

>I also don't believe in autotuners, because you lose so much power
>in the matching process

The power lost in an auto-tuner (up to 1 db) cannot be detected on
the receiving end. You lose much more in the inefficiency of your
Hamstick (up to 15 db on the lower bands) as compared to a full size
center loaded whip, and that is easily detected...

>I much prefer tuned, resonant antennas, even if they aren't the normal length.

Your resonant Hamstick has only about a 60 KHz bandwidth on 40 meters.
You will need to carry 4 of them to cover this one band to avoid using
a tuner...

>I also do not believe in trying to play
>around with tuning the rig while driving because of the distraction.

That's where the auto-tuner comes in handy...

FYI IIRC this rig was sold in UK as a Summercamp 2020 (however its
spelt) by Lowe Electronics, Matlock, Derdyshire. Internally it was a
Yeasu with bells and whistles added.
Nice Rig, I had one for a while.

Hello all, need a 2m all mode amp for trade will sell outright.

Kantronics KPC-4 dual port TNC,

The unit has all original box and packing new dual port cables (unused!)
power cube and all manuals and docs. Unit was bought new and used for
4 years. Works great but need a 140-160 watt 2m all mode amp w/rec.preamp for
12vdc
power requirement. Prefer 10-45 watt drive RF concepts but what do you have?

I have 10 watts FT726R allmode for driver to amp!

Please reply to e-mail address below for response.

Hi Mike and group,
Interesting to hear that it was sold by Lowe under a different name,
I don't know if Yeasu had anything to do with it but here it was sold
mostly through Henry Radio and made by Uniden. It carried the name
Tempo Via Henry just as the Tempo One did which was really a Yaesu
FT-200 under the Tempo sticker. However the 2020 was a completely
different radio. In that era it seems to me that the front panel
layouts between Kenwood and Yaesu were very similar. If the marketing
worked, why not? Icom and Drake where very different.

Dave -

I assume you have an Audi. I've been planning to do something similar with a Kenwood TM-D700 (though my plans involve using the hands-free mic and speaker built into the car, along with some other interesting capabilities of the system - I'm reserving the RJ45 in the armrest for connecting a palmtop or laptop to the D700 or to the car's built-in GPS).

Anyway, to your problem: (I'm at work and my Audi service CD is at home, so this is from memory). I don't recall any active circuitry connected to the RJ45, so your idea that RF is somehow getting into the PTT is probably it. Snap-on ferrites might help. I think I recall from the Audi wiring diagrams that some of lines to the RJ45 are shielded - you might try swapping connections (you'll need to make an adapter for the mic, unless you're comfortable switching its wiring as well).

The service CD is available from Robert Bentley (www.robertbentley.com). I think there might also be a diagram of the DB25/RJ14 wiring at www.audiworld.com, in the FAQ section.

Good luck, and let us know how you make out.

- Dennis Brothers, KE6DPL

If you can swing it get a VX5. It is one of the best handles I have
used.
I has a lot of great features! Too many to talk about here. It two
problems that I know about:

1. It get HOT! I don't mean it gets a little warm, but so hot you can
not hold it with bear hands.

2. It does a soft reset on voltage level changes.

Other than those two problems it a great!

I doubt it. ZL1's are a dime a dozen. I don't qsl at all myself. Never have even once in my whole radio life.There is not a single WD5CJL qsl card on the planet, and none for this call yet either.Maybe I might have a special 100 cards printed for my 25th year as a ham. But, maybe not. I've never really seen the point, I know I worked the guy, he knows he worked me. Good enough for me. MK

> thoughts are appreciated.

The newer rigs much more stable. Thats the major point as far as I'm
concerned. No tweaking the knob every time the room temp changes. Also
digital readout, which the 520 doesn't have unless you have a DG-5. On
the other hand, the old 520's have very nice audio, both receive and
transmit. Likely better than 85% of the newer rigs on the market. Most
of the smaller S/S rig's have more apparent noise on the low bands. That
is , on the 520 the audio will stand out of the noise better than many
newer rigs. And sound smooooooooooth. I loved my old 520 that I had until
recently for the audio, but the unstable L/C vfo drove me crazy. My A/C
cycling would make it drift 40 cycles back and forth. Drove me loonie
tunes. I much prefer my TS-830 with the VFO-230. No drift at all, and
still that good mellow kenwood audio. So it's up to you, if it's stable
enough for your needs, I would keep using it. If the warmup drift, and
slight drifting with temp changes gets to you, you might consider
springing for a newer model. But, I'd probably keep the 520 as a backup.
They are good old rigs, and easy to work on also. BTW, if your room temp
is very stable, you shouldn't have much trouble. The VFO's on the 520
are quite stable electrically. The only noticable drift will be thermal
related.MK

You may be running into a problem with the wire insulating enamel. Many years ago when I was winding transformers, I used a wire with FORMVAR insulation. Think that is the way it is spelled. Anyway, the insulation is really tough. It is hard to even scrape it off before you try to solder to it. You may look around for some of it. May have to locate a motor rewind shop. They should have some, but it may be too large for your needs.

The regular varnish insulation on the wire today is crap. In some cases, just bending the wire, causes the enamel to break off. Make sure you have no sharp edges.

3728. Re: Duplexer's tuning

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-27 00:00:00 UTC
From: Jim <jspaz@i-55.com>
Message-ID: <3980AA5D.420E69BA@i-55.com>
Source record: 74780

You think the test equipment to tune the duplexers grow on trees. Even if you struggle with a service monitor and a receiver, the service monitor cost over $10,000 for a good one. most duplexers will take you about half to 3/4 of an hour just to tune. This doesn't allow for the set up time or putting away all the cables and test gear. Most radio shops charge at least $55 an hour.

Remember to only use double shielded coax cable between the cavities. The cable length is frequency dependent between the cavities. Any great move in the operating frequency and you may need to make new jumper cables.

Pay attention to the TX and RX frequencies. The notch may end up on the other side from where you want it. If so, this effects how good the duplexer will function for you. It is best to keep the TX and RX relation the same before and after. In other words, if the TX was higher in frequency before you retuned it, then you need to have it in the same position after the retune.

Also remember that a solid state PA requires more filtering and isolation that an old style tube PA on the transmitter. The solid state PA, generates much more wide band noise. At least the old tube PA units had some tuning to cut down on the base band noise floor. With a solid state PA, you may even need one more cavity to get the isolation.

Have fun learning all about the fine art of tuning a duplexer. Just remember to keep all the ports terminated during tuning. An unterminated port will detune the cavities as you try to tune them. (Change in impedance.)

I have "2" Alpha Delta VRC-2 Communication Speaker's For Sale. This is the same Die-Cast cabinet, Speaker element and ported reflex design that is in the VRC model. The "2" version is "passive" (no electronics). The weight of each speaker is approx. 9 lbs. 8 Ohms. 20 Watts RMS. Frequency response : 70~15000 Hz. Connecting cable is not included.

Both are in "Pristine" condition and operation, in original boxes, packing, instruction sheet.

Price new are a few pennies under $100 EACH. I will sell these for $ 65.00 EACH and this includes shipping (USPS or Ground UPS your choice) . Pictures (front/rear) of actual samples available upon request.

Offer valid in USA, lower 48 "Only" please. No C.O.D's. Personal Checks OK, but add 14 days after I receive it to clear bank.

E-mail direct...NOT to this newsgroup. Thank's
Dave

Hello all,

I have a question about the Kenwood TM-g707 strong signal
performance.
Before I bought the rig an other local amateur said that he had
been told that the front end on this rig was "as wide as a barn door"
I have not noticed any problems with the rig until this last week end
when I was at the RIAT airshow at RAF Cottesmore where I could
hear what appeared to be the communications traffic from the gate
marshals / ambulance / etc on the 70cm band while listening to the
repeaters around the area.
The rig has not been modified to give the extended / AM receive
although air band AM RX would be of interest.
OK so my questions :-

Has any one had similar experience ?

I suspect that it is an IF image channel problem is this right ?

or is it overload of the RX amp in the front end ?

and where can I get hold of a circuit diagram as one is not supplied
with the rig.

cheers Martin G1GYC

The best thing we could all do is to just ignore Charles and his web site. All the replies and confrontations are giving him exactly what he wants, angry replies to his baits only raise his feelings of self. Sad, but many people can not feel a sense of belonging unless their actions stimulate a response in others. He will act calm and try to further the confrontation, when someone gets angry he feels he has WON. Don't give him what he seeks.....ignore him.

I need the benefit of any experience someone might have in service a noptical encoder for a TS930. Kenwood at Va. Beach suggested I might try turning the two potentiameter screws below the tuning dial, to effect a square wave pattern (no oscilloscope here), and achieve a linear digital progression instead of the forward-backward-forward-backward read outs I have been getting while tuning slowly. What works?
Also need to replace a light bulb (LCD?) for my meters dial. Is there any cheaper way to go than East Coast Transistor, who wants $4.31 for the replacement and $6.50 for shipping? Drew KD4QCX

The question I ask is simple. Why? To what ends do you make these posts?
Self-importance? Why?
If you can come up with a logical answer, maybe people might take you a little
more serious.

To all the HAMS that responded! Thank you...

I must admit my head is swimming in numerical soup! So many numbers FT100/TS520S yada yada yada...

I feel like rip van winkle: I have NO idea what these rigs look like or features! I guess I should subscribe to QST to get the reviews and lowdown...

I must admit, in searching around I have yet to see an open website with SPECIFIC technical data of 'all' the rigs, side by side for comparision...

Again folks, THANKS!!!!!

I got the Mark V last week. It replaced a Kenwood TS-950. The Yaesu appear to have a great front end and several nice features. It appears too difficult to set the mic gain and clipping level so that there is between 0 and 5db of RF clipping. Dual receive is great. DSP function and noise reduction work well. I was able to pull through some very weak signals that were in a lot of noise. I also had the thing on PSK 31. It worked fine. All in all, I am pretty happy.

Source record: 74651

Thanks to all who responded. After messing about with the wiring a bit more, swaaping cables, and trying RF chokes (all to no avail), I discovered that the problem is with Icom's coiled microphone cable. If I plug that cable directly into the radio, everything works fine. If I connect it via the car's wiring, stuck PTT. Swap it with a plain UTP cable from my computer junk box, everything's great.

The only electrical difference I can discern is that wires in the coiled Icom cable have an impedance of 3 ohms, while the UTP is near zero.

Thanks again for the suggestions.

Regards,
Dave Riesz

I have one and it does pick up a lot of intermod. There is a button that
you can push that does help to reduce the amount of intermod that it picks
up but it also reduces the sensitivity. I have to do this and run a tight
squelch to cut down on the intermod, but then I have a hard time with the
repeaters. This is mostly on 2M. I have a friend that has one he uses a
440 repeater most of the time with pl on both encode and decode so it is not
that much of a problem for him. As for me I am going to sell mine. Just my
$.02.

One of the best repeater receivers I've seen was one of the *old* icoms. I no longer remember the number but it worked very well on a wide area repeater.

However I sure would not want to use one of the modern synthesized rigs.

At one time we had a regional repeater here (GE) at my QTH, but unfortunately something in the neighborhood developed that was rectifying the transmitted signal into a wide band noise. We never did find it and the repeater has since been moved into midland at a much better location.

I picked up these two goodies at a garage sale. Not sure what they are for.

http://members.home.net/rickmudd/bigthing.jpg

Each chamber has a variable capacitor. THere is also a coil in EACH CHAMBER.
Coax connector on each end.

http://members.home.net/rickmudd/longthing.jpg

Coax connector on each end. Straight rod from one to the other. Another
straight rod runs next tot he big one and is connected to jacks on the back
of the box.

Any help would be much appreciated.

3760. FS: ATLAS 350XL transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-28 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <39813fbf.40769627@news.pipeline.com>
Source record: 74658

Fore sale, an Atlas 350XL transceiver in very good to excellent
condition. Cosmetically it's around a 9 out of 10. The only
imperfections are some small scuff marks on the front panel trim ring.
Front panel is perfect and the case is almost perfect.
I've gone thru the rig and have done some minor repairs and
an alignment.

It has the digital readout, CW filter, full QSK, 350 watts PEP input
power with a maximum of 160 - 200 watts output. Requires a 35 amp
12 volts supply since maximum key down current is 32 amps.
A suppl;y is not included. It comes with a W7FG manual copy.
$350 plus shipping.

73,
Doug/WA1TUT

You should also get a catalog from Ham Radio Outlet. It has quite a bit
of info (though not minutely detailed, but you can get that from the
equipment manufacturers websites).

BTW, I'm just getting back into the hobby myself and attempting to learn
what's out there and decide what to buy myself -- no decision at the
momnet, but the Kenwood TS570 is looking good, unless I go full-blown
with an Icom 756Pro....

Best Wishes,

Sorry it took me awhile to comment on this, visiting company has kept us pretty busy. Based on the discussion, I've decided to drop the whole concept of clearing from a failed call. One ham wrote me directly to share a one page document that his repeater group gives out to new hams at their VE test sessions. This seems like a good way to do a little elmering up front, before bad habits have a chance to form.

The first item is a filter but I cannot tell what type:
bandpass, lowpass, ...

The second item looks like an RF detector for use with
a wattmeter or SWR bridge.

My brother has the Kenwood TS-57-SG, nice radio. Then I was thinking
of getting the 756Pro. But, I deciede that my money was better spent
right now in good antenna systems.

Later,
Joe

From: Larry Anderson <w6lar@cybertime.net>
Message-ID: <3981B417.7CB1E10B@cybertime.net>
Source record: 74670

Original owner. QRO HF-2500DX QSK amp with less than 50 hour op time.
New $2895, sell for $2200 or trade for Heath SB-220 and $1500 cash.
SB-220 must be in very good condition both operational and cosmetically.

The QRO is grid driven and takes very little drive for full output. 50W
input on 75M will drive to 1500W out. 15W on 10M will drive to 1500W
out. This amp will do over 2500W into dummy load so its not working very

hard when run at legal levels. If interested call or e-mail.

Very nice ICOM 751A with ICSP3 speaker and both the SM-8 and HM-36 mikes. Built in Power Supply or will operate 12Volts DC. Pictures available upon request.

I have a TS 130S with mike and mobile mount for $350.00.

Yasue FT 101ZD $290.00.

I have other units and misc.

HT32A Hallicrafters transmitter - excellent condition and in service - Working well in all modes -AM, SSB and CW - Condition is a 8.5 - Asking price $200.00

2KW Amp 160-10 meters - pair of 500Z - 220 or 117 AC - with manual - Excellent condition - in service. Made by Sigma model XR3000D.

The above items are pick up only in San Diego.

DRAKE 2C Receiver - Has speaker installed in unit - Works great and looks good. Asking price $150.00.

MFJ 941b tuner - condition is a 9.5 - Works great. Asking price $55.00.

Hygain Traps for 80 and 40ty with instructions. Will handle 1KW. $40.00 shipped.

MISCELLANEOUS ITEMS FOR SALE:

Sigma power meter/swr bridge - $35.00 shipped.

Heath phone patch HD 15 - $15.00 shipped.

Ameco Preamp 80 - 10 meters - works well with a transceiver. $35.00 shipped.

OTHER ITEMS AVAILABLE :

Five Band Quad - could be shipped. Asking $75.00.

30 foot crank up tower - Made by Triesta out of LA. New cable - Asking price $100.00

Hygain "High Tower" - no hardware - make offer

Phone number if needed - 619-583-4624 or 619-681-8787 VM/pager

3779. help with pre ser #100 Ameritron AL 84

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-28 00:00:00 UTC
From: Mike <michaelj@networktel.net>
Message-ID: <uQkg5.4470$qm1.51708@news1.atlantic.net>
Source record: 74677

I recently rebuilt an Ameritron 84 and have had great results with 20 meters getting the full 400 Watts out with 100 watts in SSB. Great reports on 15, 20, and 40. Rig has been very stable and clean for a tube rig.

I contacted Ameritron on the mods for 10 meters, They faxed me the mods but their example amp is a bit different than mine. They show a tap off the tank coil two turns from the 15 meter tap. Their diagram shows a 5 coil tank coil. Mine has seven turns, Their other mod to complete it has a jumper between the input resistor and a 68pf cap. Mine rig has 3 caps in this location and none of them are marked. I have tried several different jumper locations with no luck.

Their Mod instructions are for serial # 100 and higher. My serial # is in the 70 range.

I talked to an Ameritron tech and he had no idea as these AL 84's were made in Ohio before their move to Miss.

Any one with any ideas is appreciated! Anyone have a shop that they would recommend to finish this up as I would like to get the 10 meters working. I use 10 meter in my car and the band is really starting to open up. I'd like the extra punch on the base unit Yaesu FT840 which gives me about 80+ into a beam.

Thanks Mike

An excellent choice. Any "average" rig on a great antenna system will outperform even the best rigs on a marginal antenna. Additionally, a great antenna system will often eliminate the need to run an amplifier...

I use a Mirage VHF amplifier with mine, and use the pre-amp feature of
that piece of hardware, so the radio is less "deaf" on 2m. Still not
ideal, but it works for me...

Source record: 74684

Hi,
I was wondering if anyone can tell me which of the two unit is a better deal?
I know the Kenwood has APRS capability and the Icom doesn't, but I was
wondering which is a better unit to buy as far as durability, reception,
battery life, user friendliness etc...
The Icom runs for about $266.00 and the Kenwood for about $400.00
Does anyone know if Icom has any HT with APRS in the pipeline?
Many Thanks
73

Hi,
I have a ford Escort and went to ford and got an inline filter for the fuel pump and installed it my self noise is gone, also installed Gold Line filters on AC cooling fan its a two speed fan in the line and a filter on the alternator and grounded all doors and hatch and hood all noise is gone in my 10meter Ranger and in my ICOM706MII. The filter from ford was about 80 bucks. 73s

What are you going to do with APRS in a handheld?? carry around a GPS to plug into it so everyone can see where you are? Carry a laptop to see where someone else is? kinda negates the handheld theory if you got to carry all that extra junk with you.

You are weighing a $266 vs $400 radio based on it, you should ask yourself if you need APRS in a handheld so bad that you are willing to pay $134 for it.

I have had the ICW32 for 2 years now and have no complaint with it whatsoever, very nice handheld, and I am glad I bought it. So, if you do get it, you probably won't be unhappy (except for APRS).

cheers

I have read over the few years about this. I have had a TMG707 and a TMV7a for 2 years and have never had a problem.. But that is because I live in a RF sparse area (lightly populated) . years ago, when I lived in Dallas, I couldn't find a radio that would let me drive through downtown without getting clobbered. I don't think there are any miracles that guarantee no intermod in any RF environment.

I have modified both my rigs to be wide band rx - and still have yet to hear a problem.

so it is kinda an answer in the negative sense, Yes, I have NOT experienced a similar problem. But, RF circumstances dictate everything.

Since you only experienced this once, in a high RF environment, then perhaps it is something to live with now and then.

I still think it is a fine radio. I won't sell mine for a long time. my $0.02 as well.

cheers

: 73s de Lupe
: w6dnc

Hi Lupe,

Before you start, you need to know what type of duplexer you have. The physical size and type are a big deal. There are regular full rack mount size (and larger, depending on the frequency range) units and smaller mobile "flatpack" types.

Then you have the type of duplexer... bandpass only... bandpass with reject... and notch type as the general labels go.

Each of the above have their own specific tunning instructions. If you can identify the type you have to me in an Email, I'll try to provide more help to you. With your callsign, you might be local enough to me (near Sacramento) that I could talk to you on the phone about it. $100 is way too much for the job. I used to charge $35 for the work using my lab equipment. If your patient, I can try to help you through it.

cheers

Icom W32A Hands Down, better than the 79A.
The Icom can receive 999 meg and the 79 cant.
The Icom has a better speaker and backlight display.
The Icom has less intermod.
Also the w32A is computer programmable.
Just my opinion.

I'd say that the clearing from a failed call is the proper method.
Virtually all, well most, of the users here in the mid west do that.

Clearing lets others know that you are no longer available, as many, if not
most of us know each other so if we don't connect with who ever we called we
are quite likely to receive a call from some one else.

Hence clearing is a common courtesy.

Customs vary around the country, but here that is the way it is usually
done.

Message-ID: <8lvkfe$f51$1@slb6.atl.mindspring.net>
Source record: 74550

Hey guys...I need your expert help.

I'm looking for a portable HAM bands reciever. It could have more than just the ham bands, thats Ok, but I'm primraily interested in just the Ham bands.

It has to be portable so I can take it to the beach, and I would rather not spend a fortune.

What can you guys suggest? Is there a chinese or Japanese sort of knock-off that gives decent performance?

Any help would be appreciated. Please email me directly at mikey1@pipeline.com

I thank you very very much. Hams are the greatest people on earth, in my opinion.

Mike

that
> "kind of sort of works".

I'd replace "can" with "may" as it is possible for an experienced person to
tune a set of cavaties without the expensive equipment, *but* it's
difficult, depends on following the manufacturers directions step-by-step,
and depends on a bit of luck as well.

I found that I could pretty well match the perfomrance tunning by ear about
one time out of five. (We used pass/reject cavaties.) So, hitting it right
20% of the trys is not a very good average.

Some maintain that you can't do it without the equipment, but it can be
done, with the proper incantations and if the phase of the moon is right.

It is not unusual for the "set decorators" to use what ever radios they could get. In that some of the set decorators and other production people are hams, they often use amateur gear in the background. I've seen this in many movies and television shows. I've even seen modern amateur gear being used by actors portraying police officers or secret agents. I doubt they were transmitting at the time, just pretending. Besides, ham gear is probably the least expensive way to get realistic looking radios into some of these scenes. Whether or not what you saw in that old TV show is an Eico or Heath transmitter, who knows? It is quite possible that it was indeed amateur gear.

3805. Icom AH2 tuner, how to hook up?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-29 00:00:00 UTC
From: retired1@juno.com
Message-ID: <8lvp62$264$1@nnrp1.deja.com>
Source record: 74553

I bought an Icom AH2 Antenna tuner at a garage sale.
Only got the big box that goes near the whip.
How do I hook this thing up?
Inside there are four spring-connectors like you find
on speakers. There's a multiple pin plug near the hole
in the case and two more rows of square pins near the spring
connectors.

If I hook up 12V to the right place, is this gonna tune?
Or do I need another remote tuning interface box at the rig???
I want to use this with an Atlas 210x, so I'll have to fake any
radio signals that it requires.

I remember seeing a schematic in qst or some such, but can't find it.

Ideas? Schematic? Hookup/interface instructions?
suggestions?
Thanks, mike

This is pretty wierd, I'm also toying with the same decision between the 746 and 920. I had actually "definitely" decided on the 920 until I read Darryl's reply just now. I wish I could get the impressions from a 920 owner before I make my final decision. Any out there?? Like Larry, 2 meters isn't very important to me either. What I want is a great DX rig with clean transmit audio and lots of receive sensitivity. On the Yaesu 920, I like the dual VFO knobs, Dual watch monitoring, and digital voice recorder, and on paper at least, it looks like some of the specs are a little better. ....this is going to be a tough one.

| I just went thur the same thing. Just about everyone I talked to
| claimed
| the 746 wins hands down. Just about the only thing about 920 that
| turned
| my head was the voice keyer. But there is a lot of software that will
| do that
| now, so it's not such a big win.
|
| I have had my 746 now for about 2 months and I love it. I was told that
| the band scope was a gimmick. It is not! True it isn't as nice as
| having a real time scope, but I use it all the time. It is great
| for those pile ups where they say listening 5 to 15 up.
|
| The short answer is no one told to buy the Yaesu and all said that
| the 746 was a great radio. Buy the 746, you won't be sorry.
|

Hi Darryl....me again....I'm just curious, do any of the folks who
recommended the 746 actually *own* a 920? I mean, you've got 920 owners
who are saying the 746 is better? What exactly is supposed to be better
about the 746? I'm still in the decision mode here.

Thanks,
David, N4GDJ

3823. Re: Help Needed: FT-1000 to Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-29 00:00:00 UTC
From: " Dale J." <nospam@isd.net>
Message-ID: <2907200004473009 12%nospam@isd.net>
Source record: 74617

Which amp?

If its a Ten-Tec Titan the hookup is banddata pin 2 to Titan key in,
banddata pin 8 to Titan key out, banddata pin 3 to ground (sheild).

With this you will not use the FT1000 internal amp relay so you can
switch it off.

Not all amps can run this switching arrangement so better check with
your amp mfg.

>information that anyone could give me about this.

Steve,

usually EU-repeaters doesn't require CTCSS-subtones to be accessed
like it's common in the US. Instead most (nearly any in Germany at
least) require to be opend a short 1750 Hz-tone!

Some few repeaters can be opened just by pushing the PTT.

That goes for 440 and 145 Mcs as well.

Hope, that helps..

73s,

3825. Lithium oOn Batteries for portable HF (12v 10AH) use

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-29 00:00:00 UTC
From: Gordon <gem1@ibm.net>
Message-ID: <3982DCB4.28E4@ibm.net>
Source record: 74619

Has anyone informtion about the availabiity of high capacity Lithium IOn Batteries for porable HF use? To be useful, the capacity shuld be in the region of 10 AH, and the voltage in the range of 12.5 - 15 V.

The advantage f such batteries is much lower weight than lead acid, and higher power/weight ratio compared to NiCds

You are absolutely correct. Forget what I said -- go to home depot and by
the GRS radios. They are more expensive but they are intended for business
use. They use the 'dot' freqs at 150MHz

cheers

Cash4Surfing

I found this on a bulletin board and decided to try it. A little while back,I was browsing through newsgroups, just like you are now, and came across an
article similar to this that said you could make thousands of dollars within
weeks with only an initial investment of $6.00! So I thought, "Yeah right,
this must be a scam", but like most of us, I was curious, so I kept reading.
Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups.
(There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured,

"What
have I got to lose except 6 stamps and $6.00, right? "Then I invested the
measly $6.00. Well GUESS WHAT!?...Within 7 days, I started getting money

in the mail! I was shocked! I figured it would end soon, but the money just
kept coming in. In my first week, I made about $25.00. By the end of the

second week, I had made a total of over $1000.00! In the third week, I had
over $10,000.00 and it's still growing. This is now my fourth week, I have
made a total of just over $42,000.00, and it's still coming in rapidly.
Let me tell you how this works and most importantly, WHY it works.
Also, make sure you print a copy of this article NOW, so you can get the

information off of it as you need it. I promise you that if you follow the
directions exactly, that you will start making more money than you thought
possible by doing something so easy! Suggestion: Read this entire message

carefully! (Print it out or download it.) Follow the simple directions and
watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (plus postage)

IMPORTANT: This is not a rip-off, it is not indecent,
it is not illegal, and it is 99% no risk - it really works! If all of the
following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE: please follow these directions EXACTLY, and
$50,000.00 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You
will
now become part of the Mail Order business. In this business, your product
is
not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to for quality
lists.
However, the money made from the Mailing lists is secondary to the income
which
is made from People like you and me asking to
be included in that list. Here are the 3 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write your name and address plus the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING

LIST."
Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent (thievery).
Next, place one paper in each of the envelopes and seal them. You should

now have 6 sealed envelopes, each with a piece of paper stating the above
phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all.
So
I
checked it out with the U.S. Post Office 1-800-725-2161) and they confirmed that it is indeed legal.

Mail the 6 envelopes to the following address:

1. Julius Tausaga, 2006 A.Fern St. Honolulu, Hawaii 96826
2. Steve Dixon PO box 511 Fairview NC 28730
3. Dan Polzin 7409 Wallingford St. Louis Mo 63121
4. Richard East 356 Grove Ln, Murray, Kentucky 42071
5. Jack Dukeshire 2 Army St, Randolph, MA, 02368
6. Bradley McMillan, RR#4, Winchester, ON, Canada, 12541

STEP 2: Now take the #1 name off the list that you see above, move The other names up (6 becomes 5, 5 becomes 4, etc.) and Add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money YOU make! You won't get very much unless you post like crazy. This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of

integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be

receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now,
add
your own name to the list and you're in business!

---DIRECTIONS----FOR HOW TO POST TO NEWSGROUPS---------
Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter, drag your
cursor to the bottom of this document, and select 'copy' from the edit menu.
This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top of the
blank page. From the 'edit' menu select 'paste'. This will paste a copy of
the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your
postings in different settings, you'll always have this file to go back to.
Step 4) Use Netscape or Internet explorer and try searching For various newsgroups (on-line forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this article as a new message
by
highlighting the text of this letter and selecting paste from the edit menu.
Fill in the Subject, which will be the header that everyone sees as they

Scroll through the list of postings, in a particular group. Click the post
message button. You're done with your first one!
Congratulations. THAT'S IT! All you have to do is Jump to different newsgroups and post away. After you get the hang of it, it will take about
30 seconds for each newsgroup! (There is a faster way. You may use Microsoft
Outlook or Outlook Express to select newsgroups rapidly. You just need one
time "Copy and Paste" to send to all of them simultaneously.)
**REMEMBER,
THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT: YOU HAVE
TO POST A MINIMUM OF 200** That's it! You will Begin receiving money from
around the world within days! You may eventually want to rent a P.O. Box

due
to the large amount of mail you will receive. If you wish to stay
anonymous,
you can invent a name to use, as long as the postman will deliver it.
**JUST
MAKE SURE ALL THE ADDRESSES ARE CORRECT. **Now, each of the 5 persons
who
just sent me $1.00 make the MINIMUM 200 postings, each with my name at
#5
and only 5 persons respond to each of the original 5, that is another
$25.00
for me, now those 25 each make 200 MINIMUM posts with my name at #4 and
only
5 replies each, I will bring in an additional $125.00! Now, those 125
persons turn around and post the MINIMUM 200 with my name at #3 and
only

receive 5 replies each, I will make an additional $625.00! OK, now here
is
the fun part, each of those 625 persons post a MINIMUM 200 letters with
my
name at #2 and they each only receive 5 replies, that just made me
$3,125.00!!!Those 3,125 persons will all deliver this message to 200
newsgroups with my name at #1 and if still 5 persons per 200 newsgroups
react I will receive $15,625.00! With an original investment of only
$6.00!
AMAZING! When your name is no longer on the list, you just take the
latest
postings in the newsgroups, and send out another $6.00 to names on the
list,
putting your name at number 6 again. And start posting again. The thing
to
remember is: do you realize that thousands of people all over the world
are
joining the Internet and reading these articles everyday? JUST LIKE YOU
are
now! So, can you afford $6.00 and see if it really works? I think so...
People have said, "What if the plan is played out and no one sends you
the
money? So what! What are the chances of that happening when there are
tons
of new honest users and new honest people who are joining the internet
and
newsgroups everyday and are willing to give it a try? Estimates are at
20,000 to 50,000 new users, everyday, with thousands of those joining
the
actual Internet. REMEMBER, play FAIRLY and HONESTLY and this will
really

work. The possibilities can be endless...You will never know, unless
you

give it a try... otherwise, it will always be "what if."
GOOD LUCK!

YOU'RE PAYING TOO MUCH FOR THE INTERNET!

Allied Radio in Chicago was purchased by Tandy in about 1972. I seem
to remember that receiver being sold in some Radio Shack stores. I
would check with the Radio Shack parts dept. for a manual.

> 527 rec.radio.amateur.policy ..."
>Let's see: 2505/12 is roughly 200 messages per month.

Or about 6-7 per day. And this one *single* message alone will count
as five. I notice that you append "x-no-archive: yes" to the header of
each of your articles so that no count can be made of your postings.

>I'm sure that each and every one of those was necessary ...

Conversations go back and forth; do you keep a count of the
number of verbal responses you give per day? Are each necessary?
That you've responded to me means you yourself just posted five
articles (one to each newsgroup in this new thread you've started).

Many of us on here are ham radio operators -- we're communicators --
on here that involves posting responses, and responses to responses.
Do you understand?

Now, answer the query I posed in my earlier message to you. Why do those newpaper clipping bother you so much?

Jeff

If your query is directed to me, several hundred of those posts are due
to the posting of FAQs and charters to the rec.radio NGs. And this single
post, written to answer your concern, will count as five posts due to you
(or someone else) x-posting it to five NGs. I'd trim it down to a single
NG if I knew which of the five groups you were on.

Jeff

3844. FS: 220 MHz power modules type M68729 30 W out for 300mW in

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-29 00:00:00 UTC

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Hello NG,

We are going to attept to use a Radio Shack HTX-404 as a repeater linking radio (Half Duplex). I know, some of you are laughing, but this was donated to us. So, we are going to do are best to make it working. However, we do need the schematics for this HT. Even the HTX-202 schematics would most likely tell what we need to know.

If someone could be so kind enough to E-mail me or Fax me the schematics for either the HTX-404 or 202, that would be GREATLY appreciated! Please e-mail to: radiotek@pacbell.net
Or Fax to: (520) 222-9043

Also, if anyone could help us on a further issue with this HT, that would be nice as well! We need to located the COS (Unsquelched Indicator) in the HTX-404. We would prefer for the COS only to be active upon proper PL Decode. Anything would be GREAT!

Thank You & 73,

Mike KQ6MU

I had to do that on my VFO-230 when I first got it. Yep, a scope is the best way to do it, but it can be done without one if you have a little patience. #1, you know it's pretty close as it is, unless someone has folled with it. So you know that you won't have to go far with either one to get it back in phase. Don't overdo it. Also make a note of the exact position of the trimmers in case you need to start over. What I would do in your case is first turn the dial fairly quickly at an even pace and note the stabilty of the readout. Then try turning the first trimmer just a teeny bit in one direction, and see if the readout is any better. If it is, try a little more in that direction. See what happens, if better, then stop with that one, if worse, go back the othert way a little bit. Each time note the readout stabilty. Then try the other one the same way, just a teeny bit in the same direction you went with the other one. If better, stop, if worse, try the other direction. You should notice a direction which seems to help more than the other. Keep going back and forth trying to find the best spot, and testing each time you turn. When you get BOTH trimmers at the right spot, the readout will start to read properly, and will be fluid and steady when going through the numbers. The should be no jumping, stuttering etc. Just go real slow, and use very small turns of the trimmers at a time, and you should be able to find the right spot. Remember, it likely will be very close to where you are now. It's not going to jump too far, the circuits have just aged a bit, and needs a tweak. Assumming no dirt in the encoder wheel. If you do it by scope , you will need the service manual. But I did mine without one, and has worked fine ever since. Just took a while to find the "sweet spot". MK

3852. dj-v5 programming cable/protocol?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-29 00:00:00 UTC
From: Zsylvan+noZs_0007@cyberhighway.net
Message-ID: <8lvilivbc1@news.cyberhighway.net>
Source record: 74646

I need (ok, want ;) linux software to program my alinco dj-v5. Simple upload/download between the radio and a file is preferable. I don't want windows (or X).

I can create the software, but I need some information. How does the interface work? It appears to be serial data stream with levels up to 3.5v... But specifically:

How are they doing bidirectional data with one signalling line?

What protocol is necessary to initiate an upload or download?

I've asked the folks at rtsars.com if their cable came with the above information and got a very nice "you could ask Alinco, I don't know I'll ask the programmers" but nothing since. So I asked Alinco, and they sent me back to rtsars. Grr.

So it seems like time for some reverse engineering. Anyone know what is in the cable from rtsars? At the very least it is level shifting to RS232, and most likely connecting so that TxD and RxD from the PC both go to the one signal line on the v5. Any ideas?

3853. Uniden HR2600 Help!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-30 00:00:00 UTC
From: jackapos@bellatlantic.net
Message-ID: <398455A9.1D5@bellatlantic.net>
Source record: 74497

Is there anyone out there who may have knowledge or documentiation as to
how to turn up the microphone gain internally.
My schematic is so tiny - I can't read it!
I have to shout into the mic to get decent SSB output, using Unidens
stock microphne.
Any help appreciated!(e-mail appreciated)

"James A. Schnoor" <schnoor@wavetech.net> wrote:
> I would like that, too, please.

You would THINK that Yaesu would have LEARNED from their horrible belt clip they offered with the VX-1R ...

But we are again subhected to a gruesome "belt clip" on the VX-5R. I could NOT attach my VX-5R to ANY belt I own and feel secure about carrying around my $300+ investment.

BUT - Bob Dashoff has, again!, a solution for us. He has modified and tweaked a Motorola(tm) pager spring/clip for our VX-5R. It wasn't until I installed his clip setup for my VX-1R HTs that I could SAFELY carry them around - and Bob has done it again for our VX-5R HTs.

Pictures and email contact are posted at:

3859. Putting the SB-220/221 on 6 meters

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-30 00:00:00 UTC
From: John / NS1Z <ns1z@agate.net>
Message-ID: <orp8osc571mv9rp6tsbuiansod582329e5@4ax.com>
Source record: 74503
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

I have tossed together a web page which attempts to provide a
step-by-step guide to converting the Heath SB-220/221 amplifiers over
to 6 meter only operation. There are pictures (such as they are)
included to clarify the procedure.

If this should interest you, please go to
www.agate.net/~ns1z/sb220.html
and look it over. Should you have suggestions on improving this
reference, I would appreciate hearing from you. Like antenna work, a
web page is never done......

If you use my page to do a conversion, let me know how you make out.

Have Fun!

NS1Z FN44rn (for those of you with ICBM capability.....)

Message-ID: <fyZg5.24805$MS3.410909@news1.online.no>
Source record: 74506

Hi folks,

I have now listed all known Drake communications units and accessories on my WEB-site; at least all the units that I know.

Please observe that my WEB-site has got a new URL:
http://home.online.no/~sindtorp/

You'll find the Drake-models listed under "Drake equipment list". All kind of versions regarding color etc. are there; 338 items in total!
I have NOT listed Drake's assistive listening products and satellite TV products.
My "Drake-want-list" is also there; 19 items only.

I would be very thankful to receive e-mails if you know of any Drake-models that I have not listed.

I hope that you will find the list useful, and you are welcome to add my site to your links.

Thanks and 73,
Sindre, LA6OP

From: ted.culin@gte.net
Message-ID: <398477bd.7323471@news.gte.net>
Source record: 74510

It isn't going to be the battery. You can try it, but I would test
the voltage on the battery before you buy another one. What makes
this odd is that the lines actually go away.

I do not have any experience with the 756, but lots with LCD panels in
laptops (and an IC-746). Usually the lines are a defect in the
display, but these areas never work again, and seldome move around.
What does move around are often called dead pixels and appear a a
single tiny dark spot.

I my work with these devices (entirely as a user) in discussions with
LCD manufacturers I have been told that LCD panels fail nearly 50% of
the time @ manufacture hence the high cost of the device. Especially
the XGA devices in the new laptops.

Good luck

I would think the problem would be sitting that close to an antenna
putting out that much power.

Any malfunctions can be corrected (computer reset) by disconnecting the battery for a few minutes. Also if you go out of your way to isolate your wires/cable with rf shield sold at any good shop, you'll minimize any potential problems. (I have a 99 Toyota prerunner)..... FYI

I'm looking for an HF amp in good condition or easily repairable
at low to medium price. i.e. < 500 dollars.
Output should be at 1 kw to perhaps 700 watts PEP.
Tubes are fine and transistors better.

Let me know what you have and its condition as well as an up
front asking price.

Thanks.

Do not have any experience with the 746 but like my 920 very much.

I live in a very heavy 6 Mtr area (FN20 north of Philly) and the 920 holds up very well in VHF contests. I had an IC 706 original model that just folded during contests. Check out the QST reviews - they do a pretty good job of reviewing the receiver performance.

Just my opinion

These are distinctive dark blue bold horizontal lines, Adjusting the
brightness and contrast of the screen from the menu has no effect. It
appears to be more a problem of temperature differential, where as it
always eventually disappears after the rig warms up.

At auction a beautiful condition Yaesu FT-840 transceiver with both the
500Hz CW filter and the 6.0 AM filter - about a 9.999 on the 10 scale.
Radio is MARS ready. Comes with box, hand mic, power cord and manual.
Radio is in exceptional condition.

Tomorrow is last day. If you've wanted an FT-840 get this one.

Check and adjust the swr. Adjust the plate and load for maximum wattage out at your watt meter, and then double check the alc so that the tubes aren't being driven too hard. Adjust alc back if needed. That's about it.

ICOM battery, a MAHA NIMH replacement battery, HM-75/A Icom Speaker
Mic,
rubber duck antenna, wall charger, manual, and possibly the original
box, if I can find it. It has the usual bells/whistles a rig from this
era has, abt 60 memorys, dual receive, PL, etc. Will run on 6 - 16 V
DC
and will put out anywhere from 15MW to 5W...depending on your input
voltage.

I would like to get $150.00 and I will ship it (US) for that.

If interested email me or call (815) 741-4585

That's nothing compared to the exposure using a 2 meter or 440 H T on 5W
right next to the side of your face.

3882. FS: Yaesu FT-2500M 2M FM transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-30 00:00:00 UTC
From: lagagnon@fakesprint.ca
Message-ID: <3984a55f.310074@news.sprint.ca>
Source record: 74526

I have for sale my Yaesu FT-2500M two metre FM transceiver. It is in perfect condition. This rig is built to military specifications and is extremely rugged, well built and the controls are easy to use. Perfect for use in an SUV or pick-up trucks. Includes CTSS, DTMF, keypad mic, mobile mount, power cord and manual.

I am selling this radio only because I have lost interest in 2M FM. It has had only 4 months of mobile use (very few hours actual operating), most of the time it was my base station at home and very rarely used. My price is USD $150 (or best offer) plus shipping. Please email me direct if interested. 73's

Message-ID: <20000730181408.28088.00000674@ng-cn1.aol.com>
Source record: 74527

I need advise! I am thinking about buying one of those magnetic bases that has 3 large magnetics. I am not sure who makes it. I want to use it with a 15 meter Hamstick antenna. I have doubts that this super magnetic base will hold the antenna securely but have been told by the local ham store that it will. I will be using a rented van and don't want to chance that it will scratch the top of the van by falling off at highway speeds.

Please let me know and THANKS!

Source record: 74533

Hello! I am in the market for a portable 10m transceiver, and I
am quite interested in two (identical?) handheld models, the
Eagle Spitfire 454 and the Titan 201. Both are quite cheap
(around $150) but I'm a bit cautious since the places selling
them seem to target CB'ers rather than hams. Does anyone have
any experience with either of these models? If so I would love
to hear what you think!

3890. HT or Moble Radios for Rough Field Travel?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-30 00:00:00 UTC
From: Mike Jordan <mjordan@thetics.europa.com>
Message-ID: <3984ba3f_1@news.nwlink.com>
Source record: 74534

I'm looking for some information and recommendations of what kind of moble radios are available that can be used out in the field while hiking and camping in rough conditions. I'm looking for both 2 meter and 10 meter hand helds or very tough moble units. They need to be able to connect an external antenna and have more than the 5 watts that most hand helds seem to have. They will be used mainly for simplex since there probably won't be very many repeaters in the area.

Features are not as primary a concern as the ability to connect an external antenna, external power pack and have more than 5 watts output. 2 meters would be better than 10 meters since it would take a smaller antenna, but the 10 meter would be good for greater distances.

Any suggestions or recommendations would be very appreciated.

Thanks

Mike

I have had one for more than a year. It is an excellent handheld and
works very well on 6 and 1.2 GHz. After modification, I can even hit
my local 220 MHz repeater with it!!!

Following are the lousy features of this thing:

1) The battery clip breaks very easily and therefore the battery will
not stay on the back of the radio. This is easily remedied however.
Simply buy the matching case for the T81A and it will hold the battery
onto the radio perfectly well. It also has the advantage of
protecting the radio's cosmetics!

2) The stupid "joystick" control. In order to change CTCSS tones,
repeater offsets, or other features of the radio, you have to press
the center of the "joystick" control. This is almost impossible to do
with 100% accuracy. You need to take a paper clip and press the
center of the joystick button in order to get the control to do what
you want it to do.

This joystick nonsense was the biggest snafu that Icom could have put
on an otherwise excellent radio. It is very confusing to use and
requires a deft and "perfect" aim when pressing it.

Otherwise, this is a GREAT value for a fine quad band rig.

> > any malfunctions? Thanks for any input.

What kind of lifespan do you expect the alternator to have? If you are still running the stock electrical system you are overstressing the alt/volt reg. Most stock electrical systems are in the 60-80 amp range, and you will be pulling that just with the amp and radio running. Leaving nothing to charge the battery, or power the ignition system and acc. You better think about buying a high capacity alterantor like welders or the guys with high power audio use. Get something that can put out 150-180 amps while running cool.

You may find your cw signal gets a cleaner tone with the voltage not dropping as you key. No more people hearing doweep doweep tones instead of dah dah.
thanks, John.

3899. Avoid DWM Communications at all costs!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-30 00:00:00 UTC
From: Newswatch2 <newswatch2@my-deja.com>
Message-ID: <8lvrps$3nr$1@nnrp1.deja.com>
Source record: 74556

To All Readers:

AVOID Tiny-Tenna and buying ANYTHING from DWM communications. Not that the products themselves are bad (although many say they are!), but DWM communications is actually a terroristic organization similar to the Scientologists. If you say something they do not like publicly, they will pursue you with their lawyers, tell lies to your employer, and do everything they can to smash your reputation.

Take a look at the spamming going on in rec.radio.shortwave. All of it is originating from DWM communication staff. They are currently attempting to disrupt and destroy many radio-related newsgroups through repeated, malicious spamming.

The president of the company, Bill Lauterbach, entered r.r.s. for the purpose of threatening, terrorizing and spamming the group.

If you give your personal information to DWM Communications, Inc. they will most likely abuse it, and may even give it to others! This company (that makes the "Tiny-Tenna") is UNSAFE TO BUY FROM, and if you buy from them you are risking not only your money, but your sanity and peace of mind as well!

You should note that this company also advertises freely on radio stations that promote fascist and racist material and carry such programming. This makes the company a racist organization, and if you buy from them you are supporting racism!

The "Tiny-Tenna" product is simply $5.00 worth of parts that anyone could build themselves, even a child. Yet they charge $19.95 for it, making a probably 400% markup.

Take this as a warning, and NEVER buy anything from DWM.

DWM's website can be found here:

http://www.qth.com/dwm/

Their phone number is 1-517-563-2613

Their address is: P.O. Box 87-W, Hanover, MI 49241

DO NOT ORDER FROM THIS COMPANY!! You will be risking a lot, and it is not worth it! Keep your sanity, your peace of mind and your money, and order from another company instead!

If you are wise, please contact the company and let them know how you feel about the spamming going on here! And above all, avoid ordering

from this company at all costs! It will be the biggest mistake you have ever made in your life!!!

Source record: 74558

I just had my FT-50 NiCad pack upgraded to a9.6V 1050mAH NiMH by NiCad Lady. They said the stock wall charger was fine to use, but BE CAREFUL, as NiMH batteries are easy to overcharge. They said to charge it at 200 mA for 7.5 Hrs, and use a timer to cut it off. I've used the radio for about 3 charge/discharge cycles now, and the NiMH batteries last longer than the amp-hour rating would seem to indicate. of course, my NiCads were shot, so anything was an improvement!

Fully 480 of them are due to the posting of the monthly FAQs and charters.
I'd gladly turn that duty over to you, if you promise to maintain those
documents to the fullest extent possible.

>I'm sure that each and every one of those was necessary ...

At least 480 of 'em are. That leaves 725 -- less than 2 posts per day.

I've used solid state rigs directly in to the cliperton with no adverse effects, but yes you can build a tuned input circuit and mechanically link/gear it to the band switch.

I've never used a tuner between the transceiver and the amp, but I have used and do have a tuned input network in the Henry 2K-4.

We have two W32A HT's.
I have only seen the Kenwood in the magazines,
but I can tell you that the Icom is a tough little
radio packed with great features.

I sometimes use it in the car paired with a dual band
mag mount, and nobody has said anything negative
regarding my output.

Hi all -
Just wondering - I'm thinking of adding a cell phone antenna to my car to increase coverage. I have a 2m/440 antenna for my rig already installed.

How might one use that for both cell phone AND ham radio? Would it even make sense?

Thanks,
Steve

I wouldn't be taking any kind of a ham/swl receiver to the beach. The
sand, sun, water and spilled beer will ruin it :-)

You might look at the web site for Universal Radio. They sell a lot of
listener stuff...

By the way, there currently are no ham bands only receivers being made
that I know of. But plenty of swl receivers pick up the ham bands.
Just make sure you get something that receives single sideband well,
and has a reasonably narrow filter.

From: ldh3@cornell.edu
Message-ID: <8m1c40$11v$1@news01.cit.cornell.edu>
Source record: 74583

A very inexpensive alternative: Try looking for a single section of used regular tower, like Rohn 25 or even Rohn 45. It's surprising, it can be hard to find an entire used tower but quite often you can find a single section-oddball somebody picked up and hasn't used.

Rohn sections are 10' tall and very strong. To attach it to the roof use a piece of L-shaped aluminum or steel for the bracket -- you'll need three pieces about 4-6" long, each face about 1.5-2" wide. Just drill one hole through it to bolt to the bottom of each tower vertical pole, and two holes to bolt it to the roof. Obviously, dummy it up before drilling so it fits. ;)))

This might sound cheesy but it's exactly how my Glen Martin 8' rooftop tower bolts down, and it's been through a lot of wind many times holding an A4S beam. And you can't question the strength of a section of decent Rohn 25!

I admit still having mixed emotions about clearing after a failed call, but most of the comments I received after posting my initial 2m operations overview seemed to feel it was unnecessary. Here in the metro Atlanta area it's a mixed bag, some hams clear after a failed call and others don't. Clearing, either after a conversation or a call, is generally not taken to indicate that the station is going completely off-the-air, so call backs by other hams seem to be happening just as frequently since I've dropped the habit.

3929. IC-756 LCD Problems?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-30 00:00:00 UTC
From: Barry <barry@wcvt.com>
Message-ID: <398437DF.F5A3C85B@wcvt.com>
Source record: 74586

I have an original model Icom IC-756, serial #02047 that has developed problems with the LCD display screen. When ever the rig is disconnected from the power supply for any amount of time, ie: when I disconnect for electrical storms,it comes back on with numerous horizontal blue lines accross the screen. The lines will diminish, but only after many hours of being powered up again. Any other IC-756 owners experiencing the same? Were there a bad batch of LCD screens installed , that I am not aware of ? Could this be just a back up lithium battery gone weak? Wish Full thinking ! Input Appreciated. Barry-N1QWA

3930. Re: IC-756 LCD Problems?

If this only happens after disconnecting power, then I presume that there is a continuous trickle going into it to keep it happy. Replace the battery and see what happens. That would be a cheap fix.

Steve:

An external antenna really helps with today's digital cellphones. I use a "dual band patch antenna" with my Nokia car kit, and a seperate dual band (Diamond) mag mount for 146/220 Mhz. Here are some thoughts regarding combining it all together:

The cellular trend is for 850/1900 MHz (dual band) phones, so you really need a quad band antenna. You could make one using parallel raditors, traps/stubs, or passive resonators. At the bottom, you would need a duplexer/triplexer to split above 500 Mhz (high pass) from below 500 (low pass), and then depending on your dualbander (one feed or two) split 146/440.

Just replaced my Larsen dual band (half wave on 2) with a single band Larsen 5/8 on the same thru roof NMO mount. Improvement is very noticible (despite what everyone else predicted). Guess it might be efficiency and/or pattern.

3936. FS:SMA-TO-BNC ADAPTER

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-30 00:00:00 UTC
From: gulyas@netzero.net
Message-ID: <8m1io5$6mo$1@nnrp1.deja.com>
Source record: 74593
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

Due you have a need for an SMA-TO-BNC antenna adapter that is custom
made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change your antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to always
having to change antennas.

Adapter features:
Gold contacts with teflon insulation.
A low profile design with a rubber covering for a factory antenna look.
The base seals to the top of the radio with no spacers needed for
moisture and dirt protection.
The base also provides an excellent support for all your antenna
applications.
No need to remove to make any antenna changes.

Sizes-to-fit-radio-models:
Yaesu: VX-5,VX-1,VX-10,FT-50-R
Icom: IC-R2,IC-T8A,IC-T81A,IC-Q7A
Kenwood: TH-D7,TH-G71
Alinco: DJ-V5
Standard: C508A,C510A
Radio Shack: HTX-200,HTX-400,HTX-245
Aor: AR-16

Previewed in the May 2000 issue of CQ Magazine.

$11.95 + $1.50 S+H (One to unlimited)
(Check or money order only)
(Specify-radio-model)

Hello everyone,

I am thinking about buying this state of art handheld and just wondering any of you own this rig please tell me how good is it?

The main reason I want to have many ham radio bands on one handheld and still get good signal out at least 3 to 5 watts.

Thank you for your time......

Yes, but someone else monitoring can jump in if they hear the called station reply but then hear you say "nothing heard". It might help the third party know that they might be needed to relay the message if they are so disposed. Would probably figure it out the other way too but what harm does it do to add 3 more syllables?

Not a Heath twoer- an Eico CB transceiver on top of the 720. I also believe the mic is plugged into the morse key input as the 720 had a stand alone plate modulator (with a wonderful tuning eye).
Very early shows had 2 pieces of commercial gear in that location of the courthouse.

Source record: 74460

Hi Zack,
I have one of the Eagle HT's and it isn't too bad. I've even managed to
work
some DX with it. The front end is a little soft (it gets desensed by nearby
KW
CB'ers) and the keyboard is really designed for FM use but it can be used
for
SSB with a little practice.
I original got it to use as a 10 meter mobile but have since picked up
an
all band radio.
It is clearly marketed to the CB crowd, but it makes a fair and
inexpensive
10 rig.

Joe -

The short answer is "no". Charge current, voltage and cell temperatures must be closely monitored during charging a LIon battery. For that reason, the charge circuitry tends to be built into the pack.

****
Mike, sometimes folks do not hone in on the REAL Question.

I just bought a palm sized HT from Radio shack
and these are my thoughts- maybe not what you are really looking for BUT

Following the manual I got the HT set up to actually operate. I bought some
extra batteries and the adapter to run it from my car cigarette lighter

Then I picked a local repeater frequency and determined the appropriate
offset,
A Net search gave me the sub autable tone, so I programed that in.

With the manual in one hand and the HT on the picnic table I finially got a
signal.

Since most of the buttons perform more than one function I developed some
crib sheets that I will type up and stick in the carry case.

1. entering repeater frequencies in the memory.
2. Set up to access closest repeater
3.details that I might use later.

all of these things will be automatic after a while but since I want to use
this HT on vacation next month I am spending some time figuring them out
now.

Hope this helps.

3962. Re: dj-v5 programming cable/protocol?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-31 00:00:00 UTC
From: KA9CAR John Dewey <ka9car@xarrl.net>
Message-ID: <8m4bba$l00$1@news.tribune.com>
Source record: 74469

Well on my ALINCO DX-77T the communications line is an open collector output which is biased high by both devices, and monitored by both devices. Either device is allowed to pull the line low. The level converter cable is cheaper to buy from alinco than others, I think it lists for $27.

The real tough part will be cracking the protocol. I tried using the "clone" feature, but I did not have the proper "ack" for the data so it froze.

Then I got the programming manual (free on the site for the dx77) and used hyper term to command and query the radio.

Good Luck
KA9CAR

Hi,

I have a Gonset GSB 101, 80-10M amp. It uses 4 811A's. Two tubes are missing. I don't know the condition of the other tubes. I do know that the HV supply works. It has some mods. The rectifiers have already been converted to solid state. That is a plus to me.

Can't vouch for the amp as I have not tried to drive it. I don't have any extra 811A's. Its complete with cabinet and in good physical condition. You can have it for $250 plus shipping.

3965. Re: FT-920 and MD-1??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-31 00:00:00 UTC
From: Darryl Wagoner <darryl@shecora.com>
Message-ID: <3985C421.412DA003@shecora.com>
Source record: 74472

Hi David,

No I don't own and haven't own a 920, but when this question was asked before
one person sold this 920 to buy a 746. One of my ham friends had a take home loaner of Yaesu 847 and ICOM 746. He went with the 847 but has said that he thought the 746 was better. He went with the 847 because of UHF. He was also the 15M station master at FD and was told to bring a better radio than the 847. That it wasn't good for contesting.

The thing that is the real winner on the 746 is the band scope. I don't see how people live without one. I use it all the time and it works great!

It is really good when a station with a pile up is working split and the split is 5 to 15 up/down. Wait till he answer a call throw the BS on and see where he is listening. Plus in about 2 secs you can check out about 100+kc of band width. If it was real time like 756PRO it would be prefect. I was told it was gimmick, but to me it is a lot more than that. I haven't found anything that I don't like except the small buttons.

I have own the rig for about 2 months and I worked about 70 countries off
a G5RV dipole.

Don't get me wrong I think you will be happy with either rig, but 746 gives
your more bang for the buck.

Also I am not a die hard ICOM fan, my HT is Yaesu VX5 and love it! I think
it is the best HT on the market.

Good luck!

The first mic is the RS-38-type, a typical mic used in transport-type aircraft. One ses them along with the more typical T-17. Telonic was the primary supplier. I've used them in light aircraft up until about 1970 when they sort of disappeared from the market. Nice mic when the element is good. The second mic is not really WW2. Its a fairly contemporary (although I admit I don't know when they were introduced onto the market....50's?), noise-cancelling carbon mic, made by (generally) ElectroVoice. Both mic's are 50 ohm (nom) single-button, carbon type elements. The RS-38 listed in Sporty's catalog for about $75 new, back a while.

Most vehicles have rubber 'knock out plugs' (don't know the proper name) - just find one close to the battery terminals in the firewall, push it out and route the cables. Before putting the plug back in, slit it and put a small hole in the middle and replace the plug into the firewall around the wire.

This way the wire will be held safely in the middle of the rubber plug - avoiding any scraping and shorting out over time against the metal fire wall - not a good thing.

Not sure on the frequencies these days. May be on the sats. Some
aircraft on the HF and VHF bands. I've worked a few Navy hams that were
on ships. So yep, they do get on the air in their off hours. Usually
will send you a QSL with a picture of the ship. MK

> AB5RM

I agree pretty much , but I'd want to check the grid current for signs
of overdrive rather than an ALC circuit. The grid will tell you the true
story. Also is a very accurate loading indicator. But, I agree , tune
for max output to assure linearity. You never want to be underloaded.
But then again, if you look at the grid current, you will know right off
the bat if you are underloaded. If a higher than normal grid, add
loading. If adding loading doesn't reduce the grid current, you need to
reduce drive until the grid is normal. Of course, I'm assumming the amp
will read grid current. Not sure.... MK

Hello!

There are two knock-outs with extra room on the DRIVER's side firewall, one on either side of the steering gear box (did you know that your steering wheel doesn't actually go directly to your front end?)

Your best bet is to pull the plug into the compartment from inside (depending on options, either or both may have existing cables)....then pass a wire or fishtape out and up into the engine compartment from the inside...tape your power leads to it, and pull them in.

Next, pass the power leads through the grommet (plug), and then push the plug back into the hole.

Carefully route the wires over the steering column (it doesn't turn, anyway), and securely fasten then on their way to where you want them.

That's it!

Chrysler minivans are about the easiest install that there is!

BTW, let me know where you want to mount your antenna...there are wiring tunnels and grounding points available all over the place in your vehicle!

3984. Re: 756Pro or 1000MP??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-31 00:00:00 UTC
From: "Gary from Florence, Alabama" <alagk@yahoo.com>
Message-ID: <soch9ggfdbm161@corp.supernews.com>
Source record: 74491

I don't have either but have operated both and looked at both and when/if I buy my next radio it will be the 756Pro without a doubt. Not to say the MP is that much worse as both are great radios but side by side I heard signals or was able to hear SSB signals on the 756 that I couldn't hear as well on the MP. This was at Ham Radio Outlet in Atlanta.

3985. wanted: 2meter ht or mobile WORKING please

Newsgroup: rec.radio.amateur.equipment
Date: 2000-07-31 00:00:00 UTC
From: kf4plp@onebox.com
Message-ID: <8m2fl8$qb0$1@nnrp1.deja.com>
Source record: 74543

Hi, I am wanting a 2 meter ht or mobile radio, in GOOD condition. MUST
BE WORKING PLEASE! My budget is limited to
100.00 dollars only. If you have a WORKING ht or mobile and wish to
part with
it for this price or less, please e-mail me and let me know. Due to
recent illness I am short of cash (had back surgery and
now scheduled for knee replacement). PLease e-mail me with
any radio in WORKING CONDITION. I would like to have one that is
also able to recieve out of the 148mhz band as well. ie
wide recieve if that is possible! Mobile or ht would be fine, ANY
BRAND is also fine. Thanks..
you may email me or call my voice mail at: 1-877-815-9949 ANYTIME!!
EMAIL ME AT:
kf4plp@onebox.com
have a good day~!!
please e-mail me only..thank you !

Sent via Deja.com http://www.deja.com/
Before you buy.

3986. FS: 40FT. Aluma Crank-Up Tower

3990. IC-756pro questions

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-01 00:00:00 UTC
From: DL <phochief@adelphia.net>
Message-ID: <pSGh5.456$RB1.60118@news>
Source record: 74348

I've got a couple of questions regarding the IC-756pro. Does 756pro
remember antenna tuner settings for each band/memory? And, what's the
method for hooking up an HF amplifier (like an SB-220 or Dentron ML-2500) to
the 756pro?

Thanks for any info,
David

Hello,

Has anyone got a circuit schematic diagram or other information for the
51J-1 model ?
Any costs or expenses will be reimbursed.
I have just acquired one of these receivers, which works. But there are some
wiring alterations which I need to check out. Any help greatly appreciated.

TIA, Denzil G3KXF.

3995. FS or FS+ Trade QRO HF-2500DX QSK Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-01 00:00:00 UTC
From: Larry Anderson <w6lar@cybertime.net>
Message-ID: <39876426.BD054548@cybertime.net>
Source record: 74353

Original owner. QRO HF-2500DX QSK amp with less than 50 hour op time.
New $2895, sell for $2200 or trade for Heath SB-220 and $1500 cash.
SB-220 must be in very good condition both operational and cosmetically.

The QRO is grid driven and takes very little drive for full output. 50W
input on 75M will drive to 1500W out. 15W on 10M will drive to 1500W
out. This amp will do over 2500W into dummy load so its not working very

hard when run at legal levels. If interested call or e-mail.

3996. Timewave Technology DSP-599zx Upgrade available

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-01 00:00:00 UTC
From: jdouglas@timewave.com
Message-ID: <8m7rfbnb3@newsfeed.minn.net>
Source record: 74354

The new version 5.0 firmware for the DSP-599zx is shipping now. All back orders and dealer stock upgrades should be in place by early next week. For anyone who purchased a DSP-599zx after 01/01/2000, they can contact Timewave for free upgrades to version 5.0. All dealer stocks will have the upgrade kit in the box and will be marked with a sticker showing the upgrade is included. Be sure to ask your salesman.

Version 5.0 provides something for everyone:

Improved noise reduction algorithms for better clarity and wider bandwidth for SWL and broadcast listeners.

CW ops get two new tools, CW Spotlight for isolating the signal you want to work, and Binaural CW for copying that signal.

PSK31 and new digital mode ops get new PSK 31 filters, SSTV filters and PC/RADIO mode used to connect the soundcard audio in and out, along with PTT to your radio.

CW oscillator mode for practice and as a tool to check out TNCs and keyers.

Thanks for the bandwidth, This reaches hams world wide and in real time.

4005. 756Pro or 1000MP?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-01 00:00:00 UTC
From: David <phochief@adelphia.net>
Message-ID: <4Eph5.768$Ke1.33214@news1.news.adelphia.net>
Source record: 74400

Thanks for the info Darryl.....as you might have noticed I changed the subject line. Now I'm looking at the Icom 756Pro and the Yaesu FT-1000MP. There are things about both of them that appeal to me but unfortunately I don't have access to either to give them a personal workout. I've read review after review and it seems like both radios are loved by 95% of the reviewers and hated by the rest. If the rigs were downright awful I doubt the majority would say things like "best radio I've ever owned." Must be more a matter of personal tastes than a definitive edge.

So, anyone reading this, if you own and 756Pro or 1000MP and want to give me some advice, I'd sure appreciate it.

Thanks,
David

"Darryl Wagoner" <darryl@shecora.com> wrote in message
news:3985C421.412DA003@shecora.com...
| Hi David,
|
| No I don't own and haven't own a 920, but when this question was asked
| before
| one person sold this 920 to buy a 746. One of my ham friends had a take
| home loaner of Yaesu 847 and ICOM 746. He went with the 847 but has
| said that he thought the 746 was better. He went with the 847 because
| of UHF. He was also the 15M station master at FD and was told to bring
| a better radio than the 847. That it wasn't good for contesting.
|
| The thing that is the real winner on the 746 is the band scope. I don't
| see how people live without one. I use it all the time and it works
| great!
|
| It is really good when a station with a pile up is working split and the
| split is 5 to 15 up/down. Wait till he answer a call throw the BS on
| and see where he is listening. Plus in about 2 secs you can check out
| about 100+kc of band width. If it was real time like 756PRO it would
| be prefect. I was told it was gimmick, but to me it is a lot more than
| that. I haven't found anything that I don't like except the small
| buttons.
|
| I have own the rig for about 2 months and I worked about 70 countries
| off
| a G5RV dipole.
|
| Don't get me wrong I think you will be happy with either rig, but 746

| gives
| your more bang for the buck.
|
| Also I am not a die hard ICOM fan, my HT is Yaesu VX5 and love it! I
| think
| it is the best HT on the market.
|
| Good luck!
| 73

| before
| one person sold this 920 to buy a 746. One of my ham friends had a take
| home loaner of Yaesu 847 and ICOM 746. He went with the 847 but has
| said that he thought the 746 was better. He went with the 847 because
| of UHF. He was also the 15M station master at FD and was told to bring
| a better radio than the 847. That it wasn't good for contesting.
|
| The thing that is the real winner on the 746 is the band scope. I don't
| see how people live without one. I use it all the time and it works
| great!

Most ships today use satellite communications, but HF is still a back up. When I was in the Navy in the mid-60s and stationed on a 2,200 ton destroyer, as an ET we had full access to all of the unused transceivers, transmitters, etc.for use after hours. During a deployment to the Persian Gulf, we were given the use of a KWM-2A/30S1 combination for hamming, then two months later we off loaded it to the next tin can entering the Gulf. Loads of fun . . .

A 30 ft. whip tuned by a remote tuner at the feedpoint working against a salt water ground in all directions makes a great vertical antenna!!

Hi folks,

I just bought a Heath SB-200 amp that's been sitting a while, and I'm planning to rebuild the power supply. I recall that many years ago there was a magazine article published in one of the ham journals on rebuilding and upgrading the SB-200's power supply. Does anyone have that information? I would appreciate a copy, or at least knowing where to look. I'll try the ARRL web site and see if there is a reference to it (maybe it was a QST article).

I took a quick look, but the Henry solid state amps were FM only (and
300w). To get SSB you need to go to 1kw, which is more than I want. I'd
build a kit except I'd really like to have the amp in time for the Sept
VHF contest. Other thoughts? Thanks,

Steve

4030. ICOM IC-3230 audio fix

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-01 00:00:00 UTC
From: Spudsnstuff <spudsnstuff@my-deja.com>
Message-ID: <8m6o2nsvr1@nnrp1.deja.com>
Source record: 74425

I've got two ICOM IC-3230's (sister to the IC-2410), an "A" and
an "H", both have given me problems with audio output and the problem
in both cases was the Vol/Squelch control pot support base which is a
small piece of circuit board that pops into the main display/control
board in the front of the unit. There are six solder webs that bridge
the boards and hold them together and they crack at the slightest bump
of the control knob.
The solution is to remove the top and bottom covers, remove the control
knobs, then the plastic face cover to expose the work area. The solder
bridges are easily seen and usually the cracks are visible. resolder
all the bridges and think about placing a bridging wire from one side
of each web to the other (I haven't done it yet but next time I will).
While the front is exposed see the row of diodes that can be
individually opened to provide "mod" functions.
Crossband repeat function IC-3230 or IC-2410 : hold ""BAND"
and "SET" untill flashing "L" appears below Tx band after setting up
frequencies and offsets on each band. PTT can override Crossband
repeat, the output is indicated by flashing".". Tx band can be toggled
with "UP"/"DN" keys on mike. crossband mode is only exited by
holding "SET" key until memory channel number replaces flashing "L".

Two easy ways to get this:

Contact the ARRL Technical Information Service (tis@arrl.org).
They will provide a copy for a small charge (I think it is
$3 for members, $5 for non-members.)

Contact your local public library or school library. If they
don't have QST back that far, they can get it through the
interlibrary loan service. There may be a small charge for
photocopying and postage, or it may be free (my college does
not charge for this at all.)

Message-ID: <3986E902.CB72F751@shecora.com>
Source record: 74428
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.homebrew

Remember when there was not Internet, WWW, Windows, large hard drives, CD-ROMs, Ether net, etc? What is going to be next? Part of the answer is CORBA. CORBA or Common Object Request Broker Architectural is a distributed, heterogeneous, object oriented, language and OS independent environment. How is that for being buzzword compliant?

OK, how in the world does this relate to ham radio? Glad you ask. CORBA takes objects to the client/server modal. I have a ICOM IC-746 and I use Logger to log

My QSO logging program will read the current mode/frequency very nicely from the radio.

It will also track spots from the DxClusters, which it will tune my radio to at my request.

The problem is what if I want to control two radios from the same serial port? What if I want to have more than one program controlling the radio? What if radio is connected to a different computer with a different OS? The quick answer is I am out of luck!

Now with CORBA you can put a radio control server object on the system that has the radio connected to the computer, then have the client object send request to the server object. Since it is a server it can handle request from any different clients. Also since the client doesn't need to know anything about the radio and how to control it one client can control many different types of radios. Authors of logging programs need only write one interface. Radio vendors could/should write the server object. This server object could at some point be moved directly into the radio, along with many other server objects. This is known as SDR (Software Defined Radio). The non amateur world has already created a forum to create standards for SDR. You can join the group for a only $1800.00 per year.

They claim that this is going to be an open group, but there aren't any amateur radio member companies yet. Even the ARRL isn't a member.

Because of lack of amateur support and the need, I am starting a open source, open standard group to create standards and applications for SDAR (Software Define Amateur Radio). All code will fall under either the GNU Public Licenses or GNU Lesser General Public License, which is for libraries so that application authors can use the code without being required to release their source code.

I hope it is also clear that radio control isn't the only part of radio that will benefit from using CORBA. Rotor control, call book interfaces,

digital interface, DSP and much more can and will use CORBA.

Please join me to create a useful and free standard for Software Defined Amateur Radio (SDAR). Bring back the homebrew to ham radio!

You quickly forgot the radio vendors are in business to sell radios, NOT
software!

> This server object could at some point be moved directly
> into the radio, along with many other server objects. This is known as
> SDR (Software Defined Radio).

There already has been a call for a common API to interface different
software, such as logging, and rig control applications to different radio
equipment. The idea is to write to the API, application programming
interface, for all functions. Then the API would call a small "device
driver" which does the detailed communications to the rig. Using this
approach "generic" software can be written to operate with almost any
equipment out there that does not need to control any model specific
functions of the hardware.

The non amateur world has already created

If it is done under the GNU public license I believe the FULL source code
MUST be made available to everyone who wants it.

> WTB Roof Tower or tripod, 6' to 10', capable of supporting HF tri-band.

Have you thought about a "through the roof" mount? There was an artical in QST about it a few months ago (and a follow up in the August issue).

Basically the top tower section was mounted in the attic and a roof vent (used for passing a vent through the roof) was used to pass the mast through the roof. The rotator and hardware were mounted in the attic (add padding under the tower section to dampen the sound of the rotator). The cables were passed through a second vent (in an upside-down J fashion to prevent water from entering). The mast above the roof-line was fitted with a rubber PVC reducer and hose clamp to prevent water from entering the through the roof vent.

It looked like it would be a good setup for some.

4042. Re: Recommendations on RFI-free UPS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-01 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <YHDh5.176$0W4.6543@newsread2.prod.itd.earthlink.net>
Source record: 74437

On AC line power. I called APC tech support to discuss the problem with them and they admitted that the UPS I'm using is an "entry" level model and does not have all the RFI prevention stuff that the more expensive units have. In a stroke of luck, the battery died a couple of days ago, so now I can justify getting a new unit. Lots of new ones available on eBay for half of new discounted retail price.

The real test of an RFI generating piece of equipment is to set a small portable AM radio right on top of the suspected offender. The last bad RFI problem I had was traced to a rather pricey audio amplifier in the next room, and was located that way. The amplifier manufacturer chose, in a cost containment move, to eliminate the bypass caps the designer had put across the legs of two high current rectifier bridges. The resulting diode switching noise was unbelievable. Anyway, several guys have reported to me that their APC UPSs generate no noise whatever, so hopefully the problem is solved.

Not at all. Creating a common API be it CORBA or otherwise would be
an important port of making the radio a complete package.

>

That is only part of the idea of SDR and CORBA. Even with a common
API a lot is lost, such as support to distributed applications, sharing
of the API between applications and language/OS independents. Because
CORBA is distributed, it allows for client and server objects could
live on the radio itself. So it would be possible for the radio to
call complex routes on the desktop computer or other hardware systems.

Yes and no. GPL requires full source release, but LGPL does not at
least
of applications created from it. That is why I like it. We can keep
the API open and free, but it won't hurt the vendors who charge for
their
wears.

Thanks for you comments, often I don't explain myself well enough and
having
people ask me questions keeps me honest.

4044. NCG transceivers -- need manuals and info for web site

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-01 00:00:00 UTC
From: "Caitlyn M. Martin" <caitlyn@netferrets.net>
Message-ID: <3987166B.9FC370A8@netferrets.net>
Source record: 74439

Hi, everyone,

I had the pleasure and the privelege of talking with Mick Stwertnik of NCG Company at Dayton this year. Most of you know NCG as the importer of Comet and Maldol antennas, Daiwa accessories, and as a brand name on some accessories and power supplies.

Back in the 1980s NCG was also the importer of National Radio (Panasonic) transceivers, which they sold under their own name with the NCG logo. National (of Japan) went out of the ham radio business sometime around 1986, and the NCG transceiver line died. At this time there is absolutely no service or support available.

A total of four transceivers were sold under the NCG name: two different 15 meter QRP mobile monobanders, a 6, 15, and 40 meter QRP tribander, and a full-featured 100 watt HF rig. So... I'm turning to the ham community for a little help at helping other hams who own and enjoy these rigs, but may have increasing problems servicing them.

With Mick Stwertnik's kind permission I have begun work on a web site dedicated to these transceivers. Included will be PDF copies of the manuals, and also of the Japanese technical references, the closest thing these rigs had to service manuals, which do have invaluable diagrams and data.

So far I have the owners manuals for the NCG-15M and NCG-7/21/50, as well as the technical reference for the RJX-715 (the Japanese model number of the NCG-15M). I still need owners manuals for the NCG-15SB and the NCG 10/160M, as well as the corresponding technical references. The Japanese model numbers I know of so far are the RJX-810 (10/160M) and the RJX-751 (7/21/50).

If anyone has copies of the manuals in question, please contact me. I'd like to work something out so that I can get hard copies and/or PDF copies.

Thanks and 73,
Caity

>Systems (ad in QST) has one, but that's about all I can find. Does
>anyone have a recommendation? Are TE Systems amps any good? Thanks,
I think Mirage make a monster 6m amp. Now owned by MFJ.

Lee Martin also offers the Skywalker kits, either in kit form or ready
built.

Both the above run around 400w out.

I've been told the bias design in the TE's leave a little to be desired.

Pretty on the outside don't always mean the business on the inside.

Did APC tech support give any indication of which units have decent RFI suppression and which don't, other than the ones with suppression are more expensive? In other words, it would be nice to know *before* buying the unit, taking it home, and testing it out. Randy.

4050. CTCSS tones

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-01 00:00:00 UTC
From: Anne Watson <anneb@azstarnet.com>
Message-ID: <soedq965dbm109@corp.supernews.com>
Source record: 74445
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

My ICO mobile automatically picks the correct tone, so I lately I have not paid attention to which tone was required. It used to be that almost any repeater in Arizona used 162.2

When I could not get my RS HTX-200 to make any sort of noise at all, I figured I better look at the fine print for the local repeaters..

Come to find out, THEY CHANGED THE TONE

Getting it reset to 110.9 solved the problem.

Hooray.

One nice thing about this HT and maybe it applies to all the other new models is that it receives clear up to 162.400 (the weather).

A good example of what I was talking about is the computer industry. Most
add-on hardware vendors hate having to write the OS drivers to go along with
their product. Some in fact even contract out the work to write the
software. I have seen some drivers that changed on an almost monthly basis
to add features while fixing older bugs!

> > > This server object could at some point be moved directly

> CORBA is distributed, it allows for client and server objects could
> live on the radio itself.

I don't think the radio is a good place for the software IMHO. The
manufactures can barely get the embedded firmware right to control the rigs
various subsystems. Remember ANY mistake may require the ROM's to be
replaced. Sure they could use EEPROM's and so on, but then the hardware
costs go up.

The one question is what happens when the standards change? This can happen
when new features are required for example, or we find that the so called
standard is not so standard requiring a more explicit description of what
each function/interface is required to do.

Finally computer power increases it seems at a faster pace that advances in
communication technology. Keeping the software functions on a cheap desktop
PC, with a low level interface to the rig, allows one to take advantage of
faster computer hardware without the need to replace to whole radio.

> > their
> > wears.

That maybe nice for the vendors, but it does nothing for the little guy who
wants to take a shot at doing some software. The beauty of open source code

is it can serve to educate at the same time it lets the Ham community find bugs faster than the vendor may do it. Plus at some point the vendor will drop support for "last year's" version and will only support the new one. I can't tell you how many dollars I have spent to upgrade software because of discontinued vendor support, of the older version, in the hope that the major bugs found last time around are fixed. In many cases I don't need the extra features, which my hardware may not support anyway, but I sure needed the bugs fixed! I can see this happening with SDR software. The old version may do everything a Ham needs, but the bugs make it less than useful. If the software was open source at least somebody has a shot at trying to fix it themselves.

> Thanks for you comments, often I don't explain myself well enough and

4058. Need help - interfacing to mobile radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-02 00:00:00 UTC
From: "Tom D." <mickeygyness@hotmail.com>
Message-ID: <39886a2a$0$706$73a6f223@reader.city-net.com>
Source record: 74298

Our company has been asked to demonstrate interoperability of our equipment and a number of different mobile radios for a emergency response team for various law enforcement agencies. Our company builds mission critical audio conferencing equipment.

My problem is this - the interface to our equipment id a digital T-1 interface. Thus I would need to take the audio from the radios and mux it through a channel bank onto a T-1 stream. This would most easily be done if I have access to the 4 wire audio and maybe a couple of controls to key the mic and control the squelch. We have been asked to interface to the following radios;
Motorola Syntor X9000 (VHF - 155.055 MHz)
Motorola Syntor X9000 (UHF - 412-420 MHz)
Ericsson Orion (821-869 MHz)
Motorola Astro Spectra (860-870 MHz)
ComNet Ericsson MDX (800 MHz)

Does anyone know if the 4 wire (Rx and Tx) audio is easily available from the rear panels of these radios? If so what the interface connector would be? If not - is it necessary to purchase the radios with special options? Will it be necessary to tap the microphone and speaker to access the audio? Any good sources for the specifications to these radios?

Any help would be most appreciated. Either reply to this newsgroup or email to:

From: WKRK <wkrk@grove.net>
Message-ID: <3988815a_1@vienna7.his.com>
Source record: 74305

I'm looking to buy a used S.T.L. (Studio-transmitter-link). I'm moving my radio station less than 2 miles from the tower site with a straight shot and clear view of the tower. I'm going AM Stereo, so I'll need some way to do the stereo separation.

Is there any other creative, inexpensive, reliable solutions to get my audio path to the tower without an STL? I would rather avoid the phone company. I'm not an engineer, just the owner... so any ideas would be appreciated. Please let me know if you have any equipment or ideas that would work at wkrk@1320am.com.

Thanks,
Tim Radford

Source record: 74309

This is a good one. In a pileup -- quite often the YL's and youngsters get through with the high pitched voices. Bob Heil offers equalized mics to enhance the high tones for DXing. Kenwood offers HIGH BOOST to do the same.

If your voice is high pitched -- I wouldn't think you need any more assist in this direction such as a D-104 or Heil dream cartridge, they really emphasize the highs.

Some ideas -- is your ALC set for maximum punch -- consistant with no flat-topping or spattering??? This can make a big difference.

Speech processing would probably help -- I think an outboard speech proceesor was available for your Drake. There were some outboard audio speech processors available years ago. Alpha Vomax made an outboard processor which some locals used for the Drake -- they said it worked well.

There are some mics that offer tone control as well as being amplified -- seems Kenwood had one -- check out the Kenwood MC-85. Several suggested a Shure 444D for a punchy mic.- better bass and mids than some of the others.

Try before you buy if you can.

Tell you what, Steve. Spend an afternoon listening on the CB band. If you find that intellectually satisfying, then by all means forget about the Ham license. Here's a quick test: If you are interested in radio and throw your beer cans out your car window, then CB is for you. If you're interested in radio and don't do that, maybe ham radio is for you.

Floyd, I am glad to know that there is still room for environmentally conscious beer drinkers in Ham Radio. :-) When I buy a six pack of beer in the long neck bottles, I peal the labile off and stick it to my forehead. (I am on the PATCH) :-)

4076. Yaesu FT-100 vs Kenwood TS-50 vs Icom IC-706

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-02 00:00:00 UTC
From: Andy Brinkley <Andy@brinkleyelectronics.com>
Message-ID: <39889CC9.C452299B@brinkleyelectronics.com>
Source record: 74316

Don't want to start a flame war, but looking for comments on running any
of the above rigs mobile.
I will be purchasing a new rig soon and will be looking for one that is
easy to operate mobile.
My criteria are :

1. Must be easy to operate while mobile.

2. 6m is an added benefit.

3. Already have 2m and 440 radios, so I really don't need 2m / 440
capabilty unless the FT-100 or IC-706 performs
as well as dedicated VHF/UHF rigs.

Any other things to look for?

TIA

Andy

From: Rodney Isom <rodneyi@noooospam.hiwaay.net>
Message-ID: <sohil9todbm54@corp.supernews.com>
Source record: 74320

Hi folks,

I've got an Alinco DJ-G1T 2m HT & the original battery pack is just about dead. NicadLady says they can replace the NiCd cells currently in the pack with NiMH cells & increase mAh rating significantly. Anybody have any insight into the wisdom of doing this as opposed to using NiCd replacements? A major consideration is whether the original charger will work with the NiMH cells -- I don't want to have to buy a new charger as well.

Thanks for the advice,
Rodney - KF4COV

"Leland C. Scott" <no-spam@junk-mail.net> wrote:
>The one question is what happens when the standards change?

In an indirect way this is already happening to some ham gear. My Kenwood TS870 HF rig can be remotely controlled by using an RS232 serial port. The rig itself should (without breakdowns) be useful for 20 or 30 years (judging from useful boatanchor gear around today). However the RS232 serial port will likely be history in just a few more years. And the operating system to run the 16 bit control software won't be far behind. I guess I should save a contemporary software/computer system just for the rig...

That's not that new. My Icom W-2A (pre-1992 HT) will get the entire 136-174 MHz FM 2m band (including military, commercial, maritime, and misc. government, as well as amateur) without any problems at all.

4095. Re: 756Pro or 1000MP??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-02 00:00:00 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <NVMh5.13537$I76.743068@monger.newsread.com>
Source record: 74370

I think they are both great rigs.

The 1000MP has double the power and works well,

The 756 Pro hears quite well, is relatively quiet, and the display is great.
I really like the spectrum scope when looking for DX, or signals when the
band is just opening.

Were I to do it again, I'd probably get the 756Pro again, but the 1000 MP
looks pretty good.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

4098. Henry 2K-3 info needed

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-02 00:00:00 UTC
From: Bill Abate <wabate@erols.com>
Message-ID: <gu9fos0djumgq552kerddg2ehs0fhojiqn@4ax.com>
Source record: 74373

I just picked up a semi-basket case Henry Amp. The more I checked it out, the more I liked it. Nice Pi-L output. Built rather well. Think I might resurrect it. I need info/jpg's/schematic/etc. I just have the RF deck, but I'd rather have that than just the power supply! It's in fine condition. There have been some minor mods that I will have to weed out.

I've seen some info on the net on the 2K but not the 2KD-3. I'd like to evaluate it before spending bucks on a manual, etc. (its not listed in the usual places). I think I'm missing the bottom cover of the tube compartment. The tubes and chimneys are missing but I think the rest is there. I think it was a floor console but that's part of the help I need.

73 es tnx,

Bill Abate, K3PGB

4099. Re: Kenwood TS-520 - Tubes?? How many watts Output? 100W??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-02 00:00:00 UTC
From: chipster166@aol.com
Message-ID: <398bbd8b.4387419@news.usol.com>
Source record: 74374

The TS-520 uses 6146B's for finals though 6146W's which are a ruggedized military version will work also, according to Kenwood you don't need to buy a matched pair. Though you will need to (should) neutralize them. IIRC it used a 12BY7A for a driver. Power output should be about 100W +/- on 40 meters, it may drop off to say maybe 85 - 90w or so on the top end of 10.

4100. Yaesu FT2700R fault....

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-02 00:00:00 UTC
From: "L.M.Preece" <mda03@keele.ac.uk>
Message-ID: <8m8peljbr1@www1.kis.keele.ac.uk>
Source record: 74375

Hello people,

I have a Yaesu transceiver with a weird fault - let me explain:

Its a Yaesu FT2700R - the Japan model - 10 watts output rather than 25watts as the UK version does - and I purchased it in its original Japanese state from a student here at the Uni who, after bringing it over 6 years ago, decided not to use it nor take it home. (Probably cost as much to take home thru UK customs as it would to buy a new one when he arrives in Japan!).

On powering up, it was on the Japanese settings of 5/10kHz steps and strange repeater shifts. A web search (www.mods.dk) advised of the correct arrangement of the diode matrix settings behind the front panel, to give 12.5/25Khz steps and the correct 600/1.6 repeater shifts or 2m and 70cms respectively.

I fitted the diodes correctly as per the mods info, powered up, and what was a working transceiver (I listened to my local repeater on it while the steps were wrong), now seems to have gone astray. A friend who's opinion I trust at my club thinks the synthesizer has gone 'hay-wire' and is running, rather than locking onto the selected frequencies. He drew a blank from that point after checking I'd done nothing silly (trapped wires, bridged tracks, etc, etc...).

So I'm now stuck with a radio that has a front end that is 100% deaf or synthesizer that is 'out-to-lunch'. Fortunately I only paid 'pennies' for the set, so would be willing to spend a little to get it working.

Have you come across this obscure fault in the past and can shed any light upon it? A reset (switching the radio memory off) has been done, and this makes no difference. Obviously, I realise the radio is of mid-80s vintage but if a small outlay for repair is needed, I'd rather do this than just have paid good money for a doorstop and fist mic.

All help and hints appreciated....

Leigh.....

4102. Help with Quadra Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-02 00:00:00 UTC
From: K1SWR <fleet@mbl.edu>
Message-ID: <3987F9F1.775C7E14@mbl.edu>
Source record: 74377

I recently installed a Quadra in the station, great addition. The only thing I was unaware of was the inability to monitor both inputs through the amp. I use a 1000MP MKV for HF and a 847 for 6M. As I see it I need a DPDT coaxial relay/switch to cut the 6M antenna line between the radio and amp, allowing for dual receive on both radios. Has anyone come up with another solution or has a good source for a relay/switch. thanks in advance for any comments.

73, Barry K1SWR

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

4104. Re: Recommendations on RFI-free UPS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-02 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <xqVh5.3658$Z6.153184@newsread1.prod.itd.earthlink.net>
Source record: 74379

Exactly the words I used on them. While they did not specify precisely which models lacked the suppression, it was clear to me that the smaller units that carry "Office" in their name lack the suppression. When you read about the models on their website, they specify EMF/RFI suppression for all the other models except for those in the Office line. When I bought mine, the little "office" UPS was $139. Now, you can buy a 500VA regular model for $129 at Staples office supply. I really doubt that they gave any consideration at all to the fact that hams or others using AM radios would be using a UPS.

I am a female and am having trouble being heard or understood on HF. It's not for lack of getting out tho. It's just that my voice is not carrying too well. I have a Drake TR 7 and was wondering what would be a good mic to get for it to help me be heard/understood better? I had first thought of the Heil Gold Line mic. But in reading the literature about it, it states the the best results are with on on board transmit DSP or outboard EQ. I do not want to have to purchase an EQ too so was wondering if there is anything else that would be a good choice for my situation. Please email any thoughts, ideas, or help to me at: N9YLN@aol.com
Thanks in advance!

Hello,

I have been considering on purchasing another IC-706 for my mobile,
but want to upgrade to the mkIIG. The best new price I have found is
Texas Towers at $999. Anyone know of a better source/price? Anyone have
a nice used IC-706MkIIG at a good reasonable price?

Thanks,
Piero - N3FVG

Hi,

Thank you for reading this message.

I own an FT-11R 2mtr transceiver. When I got it I also got the FNB-31
4.8V Ni-Cd battery pack, and the FBA-14 dry cell battery case.
Unfortunately both of these only let me transmit at 1.5W output max. I
would like to know how to wire up the 4 power connectors of the radio in
order to work the full 5W output.

Many thanks for you help.

David / 4Z5DK

I like you call Renee-

Most female voices tend to favor the high end of the passband of the voice range on most SSB transmiter /receivers. IMHO, a microphone or a graphics equilzer that limits the high end and enhance the bass responce should provide help in this matter.

Best of luck and 73's

Dennis WB3KUM/9

The D104 is an economical (used ones can be had for ~ $50) mic which
is compatible with the TR7 and haspretty good mid and high end
frequency response. If you want to get fancy, a 2nd hand stereo
equalizer can be used between the mic and the rig to shape the audio
response to fit your voice. The TX bandwidth on the TR7 isn't that
wide, so some EQ might help you boost the mids or highs, or whatever
of your voice freqs need some emphasis. Good luck & 73

> having HF, 6 and 2 meter one radio. Anyone care to compare and comment about
> the FT920 vs the IC746?

I went down the same path. The DVK on the 920 caught my eye. Everyone
I talked
to said that the IC746 was a great radio. The 920 was OK, but not up to
par
with the 746.

I have had mine for about 3 months and if you ask me what I don't like
about it
I pretty much come up blank, with one exception, the band scope isn't
real time,
but I don't have the money for a 756pro so I will have to live with it.
Don't
get me wrong I am not saying the band scope is useless, far from it. It
is the
next best thing to sex. It would be better if it was really time, but
you
couldn't take it away from me now and I wouldn't have radio without one.

Good luck!

Skip them all and get a use IC 756. In the $1350 range, there are quite a few available under 2years old, and you will like it better than all of those, except perhaps...for the 870. Just my thoughts...Ive had em all and other than the pro, the straight 756 is my favorite...Ill even find you one and gaurantee it if you like!! 73 Murray Murray's Radio Ranch: Buy Sell Trade Swap Amateur Radio (Ham Radio) Equipment

Good reason not to stick everything in one box with a closed design. At least with computers you can upgrade them to an extent by swapping out cards, drives etc. What would be neat is a rig where you can swap out modules, such as the front end, bands, PA's etc. All you would need then is an "empty" box, with a dot matrix display front panel using soft-keys, where you just drop in the modules for the functions you want. I know this has been done to an extent before, FT-726/736 for example, but the modules were BIG and COSTLY! After ten years of advancement in electronics, and DSP, I think its time to take another look at this idea.

Why? Instant gratification. It's often easier to find a truck-stop CB shop eager to hop-up your CB and sell you an amp that'll work DX than to find a ham willing to "Elmer" you into doing it legally. This argues that we could be part of the solution, if not part of the problem.

How? The FCC simply doesn't have the manpower or resources to make a dent in the practice. It's silly to expect FCC to catch mobile stations running extra power when law enforcement in general catches less than half of murderers.

Operating standards? A land mobile band lies between CB and 10m. Every cop-shop and fire house has a station license but never uses it, having moved up to VHF/UHF FM, leaving the band essentially empty. Even CB techs know there is no such thing as a 40-channel radio - the PLL is binary so they're inherently 64, 128, etc, channels. I used to have an old 10-11m receiver that'd monitor these freq's. It's a different world than CB. If I didn't know better, I'd think the pirates were all hams - except that they don't insult each other as often .. :o) Too bad there's no way to encourage them to "get legal" ... or is there. Ideas?

I am not sure what you mean by audio tones. The MC-85 has a "Mic Level"
adjustment amd a "Compression Level" adjustment. You have the option of
having the Compression On or Off. There is also a Tone Adjustment, the
choices are "Low Cut" and "Normal".

Hope this helps.

Hello there,

I am looking for my first ham radio, preferably mobile not a HT. If anybody has a 2M radio for sale, please email me with a picture and their asking price. I am interested in a multimode radio, but would also be interested in an FM.

Please only respond if you are willing to ship to Canada.

Thanks in advance,

Richard.

4136. FS or FS+trade New Price QRO HF-2500DX Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-03 00:00:00 UTC
From: Larry Anderson <w6lar@cybertime.net>
Message-ID: <3989B40F.F6887BF7@cybertime.net>
Source record: 74261

Still offering the QRO HF-2500DX QSK amplifier for sale. New $2895, new asking price is $2000 or trade for Heathkit SB-220 amp plus $1500 cash. Condition is very good. Less than 50 op hours. I am original owner. Buyer pays shipping. If trade, SB-220 must be in excellent condition with low hours on tubes.
Only flaw on HF-2500 are minor scratchs on top cover front to back edges.

From: Rob PA3CXI <rob.kuijpers.jr@planet.nl>
Message-ID: <8mch2p$auuak$1@reader1.wxs.nl>
Source record: 74263

Hi,
How can I program a Kenwood TK3101 portable transceiver? I've got the SW (thanks Graig), but how do I link my PC to the rig. How can I increase its power from 0,5 (European version) to 2 Watts (US version)?
Regards
Rob

check out http://www.sdr.org/

Just to be clear I am NOT a member of this group. I can't afford it.
For the
most part it doesn't look like hams are invited.

My eagle spitfire works okay on SSB, but when I tried it on AM or FM I get the same as you said. Very hard to read, almost sounds like its transmitting through a 2.4 SSB filter the way it sounds.

It is true that GNU had it's root in Unix, but many GNU applications
have been
ported to WinTel such as GCC, emacs, vim, bash, etc.

But the idea isn't to be Unix based, Window Based, MAC based or VMS
based but
CORBA based. CORBA isn't tied to any one OS, architector, language or
machine.
CORBA routes object request via an ORB (Object Resource Broker) which
talks
to another ORB which does the work and returns the results.

Keep in mind that is just an example.
Just for example lets create a CORBA environment using todays equipment:

This CORBA ham shack has:

Computer 1: Win98 P1 with two rs232 port connect HF radio and rotor.
computer 2: P2 Linux system also with one rs232 port connect to TNC on
2m packet
DXcluster
computer 3: Win2K with great monitor and graphics also with rs232 PTT
for PSK-31
computer 4: Mac with great sound processing
computer 5: Call Book Central service (CBC) located on the Internet
computer 6: DigiQSL Card server.

All computers connected via ethernet.

ORB connection:

The control workstations (computer 3) is the Win2K which is running
OrbLog 1.0
which connect via ORBs to:

computer 1: HF radio and rotor to set/read freq/mode
computer 2: to the DXCluster to locate spots
computer 4: copies audio from the radio to the Mac where the Mac does
AF DSP
before outputting the signal to the speakers.
computer 5: to CBC Callbook Database to lookup call signs info.
computer 6: DigiQSL to send out either digital or hard copy QSL cards
once the
QSO is completed.

Impressed? Wait there is more. Using naming services, it is Plug and
Play. You move
your rotor to a different system. OrbLog finds. Move the radio to a
Linux system.
OrbLog finds it.

Buy a new radio of a totally different brand that just came out, OrbLog
doesn't care,
the ORBs takes care of those details.

This is all stuff that can be done by us, without help from radio
vendors. When
the vendors start to see the light, they will start putting ORBs in
their radios,
then magic is really going to start to happen. Notice that I said when,
not if.
CORBA is like the Internet was a few years back. Those who understand
it know
that CORBA or something like it is going to be an important part of just
about
every computer.

I am exited because once this takes hold we won't have to work about if
our
logging program will talk to radios, DXclusters, rotors, etc. It either
will or we can write a CORBA ORB without changing the app. It is going
to rock!

From: Paul Armes <pwa@corridor.net>
Message-ID: <3989E34F.1C36193D@corridor.net>
Source record: 74267

I am new to the hobby. Just received my tech license and will do the
code and general within a few days.
I am interested in a used HF rig which would be inexpensive yet good for
a beginner. I don't have much to spend but don't even know where to
begin. What units are good as starter units?
I have checked eBay but don't know if the prices there are reasonable.
Seems to be a lot of Kenwood on the used market.
Thanks,
Paul Armes

I want to thank you for your comments. I have been in CB since 1978 and I don't throw my beer cans out the car window as one of the 'Upper Crust Hams' (Joke) commented. At least I don't put all 'Hams' into 1 category as that writer did. I enjoy talking on SSB as a lot of other CBer's out there. Each person has a choice of how they choose to use their time and money. I really get angry whena person makes a comment like this. CBer's are not lower class citizens of the U.S. There are certain people that think they are better than thou in Amatuer and CB radio. I have many friends that are hams and they do not have this attitude. All I can say is 'To each his own'.

4149. FA: ONLY $2.50! 12VDC @ 200mA AC Adaptors

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-03 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <3989e81c.75894641@news.pacbell.net>
Source record: 74274

I have a bunch of 12VDC at 200 mA AC Adaptors for auction.
These may be used for Charging batteries for your HT, can power an HT
on low power. They are also good for Cellphones, portable TVs,
powering amplified speakers as well as other things.

I have a total of 69 of these and they are only $2.50 each!
These are surplus, so some are used and some are not. They all have
long cords with a power plug on the end. Center is positive polarity.
Ends tomorrow.

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=395062447

Paul there are lots of good starter rigs out there the Yaesu 101E is a good radio and so is the Kenwood TS 520 which you can find either for $200 - $250 either here or do a web search for Ham Radio Classifieds or the QRZ.com web site. The TS 520S or TS520 are good strong radios and are a bit stronger in the transmit section than the yaesu radios due to the 6146 finals they use. The Yaesu FT 101 uses old TV Sweep tubes for finals and usualy does well with them however see if you can find someone with a matched pair as spares. Check also Ham Radio Outlet or Amateur Electronic Supply for sales or tubes as if you get a tube radio I would suggest locating a supply for the replacement tubes. Also a tube final radio will require tuning of the final amplifier section something that a lot don't like to do.

If you will pay just a bit more you can get a good Solid State radio which will perform just as well and sound great. I like the TS 440S by Kenwood and make sure it has a built in antenna tuner. Unlike the TS520 and FT101 radios though you will need a separate external power supply around 20 Amps and adds to the overall price. Make sure the radios have a microphone also.

Last if you are in the area of a Hamfest go there as there are usually good flea markets there with hams that are selling. On here, the newsgroups, are also good however with anything you are trusting your money to someone unknown whereas with a store like AES or Ham Radio Outlet you hve some protection through credit card purchases and also are dealing with a dealer but will most likely pay a little more for that right.

Good Luck!

4162. Re: Need help - interfacing to mobile radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-03 00:00:00 UTC
From: Jim Allen <jmallen@altavista.net>
Message-ID: <8mdo8mvpk1@slb1.atl.mindspring.net>
Source record: 74287

Should be no major deal; simply option the radios for "tone remote", wherein
the control operator's console is located separate from the TX site. Often,
these remote lines are carried over standard leased copper pairs; with voice
and command/control being implemented through very short-duration tone
bursts. Our town did that with a bunch of remote receivers for the local
PD/FD. To go through a T1 line, any audio on the copper pair is run through
a DAC, muxed (if necessary), thence across the T1, then de-muxed (ditto)
and back through the DAC at the TX site. You're done.
If you don't want to spend money on options with Motherola or GE/Ericsson,
look at the aftermarket, such as CCI, CSI, Comm-Spec, etc.

Actually I know some one that after getting bored with modifying Kiddy style walkie talkies at the age of 8 finally got an 18 chanel AM rig for his 10th birthday which was shortly there after modified it didn't take him long to modify it to 40 chan and then beyond after learning about and making a crude EPROM burner. Made his pocket money modifying rigs and making 150W 2 transistor not so linear Linears! Next came jamming local TV stations and Pirate TV(had his own station for a whyle, with multipe TX sites to avoid DFing), supper small FM bugs (filling down components as SMD wasn't available then. Even routed down IC's with a wood working router to make them SMD) and TV transmitters made from salvaged TV's. Then into Ham radio and finally got his Full call Ham licence at 15 after studying code for about 2 weeks. That was the only thing necessary as he got 98% on the theory.
Then got his first real full time job a year before completing UNI as one of the 4 design engineers at one of the worlds biggest commercial HF land mobile companies! Worked there for 3.5 years before getting bored!
You see it really depends on what you want to do with your life. If you just want to make a nuisance of your self because your intellectually deficient or you just need a stepping stone to get you started.
So if you want to make a career for your self get into it but don't let it drag you down to the same level!!
Cheers
Eric

As a friendly suggestion, those wishing to get opinions concerning this rig against that rig, etc. might want to try going to www.dejanews.com and do a keyword search of the newsgroups' past postings using "FT-920", "TS-850", etc. for a keyword. There are numerous past postings comparing this rig to that rig, and your question(s) may well have been asked and answered any number of times in the past by several different people.

Althought the question is slightly off topic, I thought my two cents were needed.
All be it that Hams would bad mouth CB'ers but I don't really enjoy watching my tv get scrammbled because the Hammer next door enjoys talking on his radio. I just set back and watch his money goto waste, his Ham radios put out more out of band than my small but very effective 12 watts PEP on Side band. If you will listen to most of the old Hams, they too were once CB'ers but wanted to experiment with different modes and bands. I for one enjoy talking on the so called Chicken Band, but I usually don't mix words with hams untill I've had my fill of their nosense IE: Why are there so many Illegal CB rigs!!! because there are just a hand full of people from the FCC to try to regulate all bands and modes!! I've heard Hams that were worse than some CB'ers.

Really, all this time I thought that CB stood for "Children's Band". Then
again, you are right about it. I will take my Ham radio anytime over CB.
The only use I have for CB is letting my children play around on it,
except for ch 19, talking to each other.

Mike:

Can't furnish the dimensions 'cause the vehicle I have the -281 mounted in is not close by.

The speaker has plenty of volume. Clarity? In my opinion, I've heard speakers with better fidelity.
I suppose at age 53 my hearing is not perfect, but the Kenwood speaker in my other vehicle certainly
has a wider frequency range. Overall, the MFJ spkr is a good deal at the price it sells for.

I've had all three of those radios, and I would go with the 870. It's got a better receiver than the other two, and you don't have to worry about additional filters - a good solid radio.

Just my .02¢...

John

Rod:

You will like the increased operating time of the NiMH cells, typically double that of NiCd, or more. NiMH charging cycles are more stringent than NiCd therefore
I suggest using only a charger specifically designed for NiMH cells.

Another advantage of NiMH is they can be recharged when only partially discharged, unlike NiCd
which should be almost totally discharged before recharging.

Al, W2JUV

4188. WANT: 420-430 MHz Range Transceivers for Linking

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-04 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <398a5f20.106367696@news.pacbell.net>
Source record: 74198

Hello NG,

We are piecing together a FREE to use repeater system here in Southern California. We need to find some radios that will cover in the 420-440 MHz region. We need these radios to link between the different repeaters and remote base/link sites. We do not have a whole lot of money to spend, so we are looking for some radios that are economical. Are first link radio will be the HTX-404 440 MHz radio. This was donated to us for that use.

If anyone has something that they would like to part with at a nice price or donate to us for the repeater system, please E-mail me or call me. We don't need anything special, just something that is synthesized and works.

E-mail: radiotek@pacbell.net
Phone: (661) 272-6949

Thank You for reading & 73,

Mike KQ6MU

4189. FS 4cx800a 4cx400a tubes

Newsgroup: rec.radio.amateur.equipment

Source record: 74199

I have a matched pair of Svetlana nos 4cx800a tubes for sale. These tubes have never been used, are in great shape, and will produce as much wattage as any tube of the same type sold by any distributor, period. These tubes do come with a warranty from the distributor. You can see a picture of the tubes at the url at the end of this message. The matched pair is $200.00 plus shipping. I also have a pair of Svetlana nos 4cx400a tubes. These tubes are $180.00 plus shipping. I will be glad to answer any questions you may have.
Thanks for your time.

4190. Re: Icom Mic on a Yaesu?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-04 00:00:00 UTC
From: " Dale j." <dj2001@isd.net>
Message-ID: <040820000408450223%dj2001@isd.net>
Source record: 74200

If you have access to QST November 1993 page 82-83 (hints and kinks)
titled "How to connect an Icom SM-8 mike to the Yaesu FT-990
Transceiver"
This article will show you how to do it. More involved than just
hooking up the wires because you have to provide some voltage to
operate the SM8 mike preamp. Its not difficult though and I used a SM8
on a FT1000 for several years, worked very well except the SM8 has a
lot of gain and picks up room noise easily. Good luck Dale J.

> I have an Icom SM-8 Mic that can be connected to two traseivers. Hooking it
> to my IC-746 is not problem, but I want to also us it with my Yaesu FT-840.

Considering your criteria, look at the Alinco Dx-70TH. It's 100W 160-6M and
cant be any simpler and still work. The nicest thing, it INCLUDES ss/cw
narrow filters, DTMF and it's generally cheaper than the Kenwood

:

I have been thinking about this thread since it started. The value of a ham API for radio hardware is great. Some manufacturers will follow right away, others will remain proprietary until hams start expecting/demanding a compatible interface. The idea of using CORBA at the equipment level is bad. CORBA is too heavy for this class of imbedded application. The processing load is sufficient in many radios to force the manufacturer out of using a lower-cost processor. Compare Gnome, a CORBA-based windows manager, to KDE. KDE performace is much better because of the CORBA overhead. Note that KDE is slowing moving towards a CORBA standard, but that move has happened only after the "economy" PC moved past the 500 MHz speed mark.

The value of an object-oriented and network-centric API layer above the equipment layer makes more sense. Look at the OSI or other network layering and you will see that the ethernet card does not need to support a protocol as heavy as CORBA. Let the hardware have a common API, but put the object packaging above the equipment layer. If you want a unified CORBA solution, you can design a box to fit in between the radio and the network that supports CORBA or some other object model. With a common API, the box will always work. A well-designed box could have outputs for ethernet, tcp/ip packet, ppp, IR, wireless IP, or a proprietary scheme. This approach opens all the same doors, lets the manufacturers keep their 4-bit processors, saves the manufacturers from having to invest too much engineering time meeting the CORBA standard, and opens up a new market for the CORBA interface box.

Hi Andy and group,

You bring up a lot of good points. CORBA is quite a heavy has the press
has made it out to be. Of course anytime data marshaling and network
protocols are added to an apps things will slow down a little. One of
the
problems so have had with CORBA was they tried to do too much with
CORBA.
i.e.: "Let's make CORBA wrappers for all of our API". Never the less
your points is very well taken. I could also be wrong about this and
CORBA is a total dog. At any rate, I like the concept behind CORBA
even if it isn't the finally solution.

I think I understand your interface box, but could be the same
system as the users PC. Which was how I was trying to lay out
the example. Each PC had a server ORB(s) to manage one aspect of the
station. As you say this solution would take us a long ways to
proprietary and driver independents without moving any intelligence
to the radio. This will come. My hope is that if we can form at
standards forum we can kept one vendor from trying to rule the world
and kept everything open.

Andy I like your attitude! It is refreshing to have someone not
only points out problems, but offer other solutions. Your comments
are most welcome!

> compatible interface

IMHO a common API which all Ham Radio software used to control hardware is the smart route to take. The equipment manufactures may not need to much, if anything, to support a standard common API. Most systems are designed in a layered approach anyway to isolate code modules, and systems from another. A layered approach lets each layer change internally without impacting the interface to the other modules above or below it. As a minimum the system would be the hardware level, the driver module level, and finally the application software level.

The manufactures of Ham Radio equipment may, or may not, need to add extra "commands" to their software interface to support a standard API. By allowing the manufactures to keep their current command set we will insure the rigs will continue to work with older software, while providing the extra functionality, transparently for old software, to support a Ham Radio Equipment interface standard API. Hardware which currently does not have any form of software control will need to have it added.

The driver module typically interfaces between the application software, and the Ham Radio hardware. The driver module can communicate directly with the hardware, or use another driver, for example to talk to a RS-232 port or a LAN card. In any case the driver is the place where the translation from the propriety equipment manufacture's command language, for rig control, to the standard API takes place. Even at this level it is not unreasonable to have a series of lower level drivers, one for each piece of hardware, interfacing to a high level driver, which "exports" the standard API. This is the system used by many operating systems so that additional hardware can be added, or changed, without the need to rewrite all the application software.

Finally the application software is written to the "exported" API, and NOTHING else. As long as the application programmer does not take short cuts by trying to communicate with the hardware directly, or at a level below the top level driver exporting the API, we can change the hardware at will. This is like a PC application where you can read and write a file to your ZIP drive, hard disk, or a network drive. For the application software the operation is the same because it is using the API provided by the operating

system, which works by hiding the hardware differences among the different devices from the application.

I have an old R7. Its down on the ground, bent, few parts missing. It will take some work, and either some parts purchased from Cushcraft, or fabricated, to get it in working shape again.

When last tested, all of the electrical parts seemed to work.

I barely have any time to opeate, and no time to fix up an antenna (its been replace by an R-7000)

But... you can't beat the price. Free - only if you come by and pick it up. I'm in Northern California, near Redwood City.

My guess is that this will appeal to one of two types of hams - The kind with lots of spare time and initiative who will fix it up and be happy that they got an antenna cheap, and the kind (like me) who will put it in their backyard with the happy thought of how they will someday fix it up and have a cheap antenna, where it will sit for years, gathering corrosion

Micor 2m conversion repeater
model 893RCB-3145B-RH52,
on 146.700/146.100,
100w solid state final,
new helical RCV filter installed/tuned,
with full duty power supply,
installed in cabinet,
with service manual.
Scom 7k controller w/ all options, (PL & patch),
recently sent in for latest firmware upgrade,
with user manual and windows software.
new price $900
Telewave duplexers, NEVER BEEN USED - NEW!
tuned for above frequencies,
model TPRD1556.
new price $1572

Total replacement cost is about $3972 - asking $2000 + ship
Serious inquiries ONLY

:
: Finally the application software is written to the "exported" API, and
: NOTHING else. As long as the application programmer does not take short cuts
: by trying to communicate with the hardware directly, or at a level below the
: top level driver exporting the API,

Ouch! You just hit on an important problem. I have been investigating the
problem of remote control of a radio through networks. Think about adjusting
a tuning knob on a receiver for listening to SSB. Now, imagine a delay
between the knob adjustment and what you hear. Tuning becomes a nightmare.
Internet control of a radio introduces these delays, mostly in network
delays and audio encoding delays. If a heavily layered series of
APIs and drivers add to that delay, then the problem only gets worse.
Too much layering, or an incomplete API can interfere with smooth remote
radio control even if the other problems (delays) in the system are
solved. Some method of issuing low-level commands might be a part of
the specification.

:we can change the hardware at will. This
: is like a PC application where you can read and write a file to your ZIP
: drive, hard disk, or a network drive. For the application software the
: operation is the same because it is using the API provided by the operating
: system, which works by hiding the hardware differences among the different
: devices from the application.

Leland and the group,

Everything you say is true, and a conventional API standard may indeed
be a good starting point. Conventional APIs have following
disadvanages:

1. Must live on the same system.
2. Must be loosely or tightly linked with the application
3. Language restrictions.

I am sure it has others but can't think of them now.

Of course CORBA isn't the end all either it has the follow disadvanages:

1. Limited Windows support so far. It is coming.
2. There is a small (less than 1 millsecond) performance hit,
which if handled correctly won't be an issue.
3. There is a learning curve.

I do think you are right in that we should start off with maybe a
DLL library or ActiveX.

I am going to take a first cut a radio interface spec this weekend
and post it to the project mailing list.

Myself, I usually think of a tuned input as one that is adjustable. Or
as far as amp's anyway. Most radios use a 50 ohm output. Most amps use a
50 ohm input, but some can vary a bit. A tuned input lets you adjust the
input circuit for the best match to the output of the rig. Most tube
amp's have a tuned input. I guess also you could refer to any tuned
input circuit as a tuned input also even if not adjustable, but when I
think of a tuned input, I think of one that can be adjusted. MK

I think it was a console. But not sure, they also made a 2K-4 I think.
Dunno, I'd hate to scare you off, but if it's missing the pedestal and
power supply, and the tubes and chimneys, you will be looking at some
money to rebuild. I'd almost rather find another to use, and keep the
other for spare parts. I have a 2K classic, which is similar, but quite
different also. So any info for mine, won't help you too much. I do know
a friend who has a 2K-4, but I don't know the differences between his
and yours. Probably not drastic. MK

Maybe so, but the ad's aren't supposed to be on here. That is what they
have the swap NG for. This NG is for radio equiptment and technical
stuff, not auctions, and sales of rigs etc. That these people seem to
totally ignore this, makes me think either they think they are better
than everyone else and don't care if it ruins the NG, or can't read, or
are just plain stupid, or are just plain old assholes. Take your pick.

The following equipment is for sale. Please respond directly to Joe Nunimaker, KD3VR at bmejoe@juno.com or call him at 301-577-3749. He does NOT have access to this Newsgroup. Thanks.

Item 1):
2 Micor, solid state, 100 watt continuous duty repeater/base stations. 2 channel transmit and receive. Carrier squelch and private line, tone coded squelch, digital voice protection. Motorola C73RXB-1126B, date code of October 1988. Absolutely mint condition. Guaranteed to be completely operational.

These units have consecutive serial numbers. Both units are identical except one unit has a receiver board model TLD5781AV, which covers 132-142mhz. This receiver board will cover the 2 meter band without modification. All other boards are exactly the same in both units. The units are configured as remote bases, so they will need to be rewired as repeaters, if that is the intent of their use. This is easily done with the manual. Asking $895 each. Pick up only please from Maryland just outside of Washington DC.

Item 2):
CAI, commercial marine band, 2-30 mhz. 1 KW, continuous duty HF transceiver. The exciter unit is in a 19 X 22 inch equipment cabinet, is diode programmable and has 150 watts of output. The PA unit is in a 19 inch X 4 foot, roll around equipment cabinet. The PA unit uses an 8877 ceramic tube. The unit could be converted for the amateur bands by someone with some electronic experience. It is in working condition and can be seen in operation before purchase. Asking $500. Pick up only please.

3):
One (1) Eimac 8877 ceramic tube. Unknown age but can supply serial number. Will guarantee the tube to be in good operating condition and will make rated output power. Asking 450, plus shipping.

73 Thanks
Joe Nunimaker, KD3VR
bmejoe@juno.com

Hi to the list

Can any one advise me as to what frequencies the following dummy load is rated for. It uses a large connector, some what similar to a very large PL-259. Can anyone let me know if it can be used with an RG8 type cable and a source for the connectors?

Model 82AV
Watts 500
Ser # 183
Ohms 51.5

Manufactured by Bird Electronic Corp.
Cleveland, OH

Thank you
Mike/K5VSE

4225. Re: tuned input

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-04 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <398B6F9D.F4437DBB@dialpoint.net>
Source record: 74235

Usually used to define a linear amplifier with a tuned (matching
circuit) in the input to the amps tubes. Many (some) of the older
grounded grid amp circuits just used a RF choke to keep the cathode
above ground for RF. The impedance was usually low enough the older
tube transmitters could load into it . That is an untuned input. The
newer solid state rigs don't have any way to adjust the output to match
much other than a 50 ohm load (well some do have internal tuners).
Without the tuned input , the transmitter will not usually put full
power into the amp due to the large missmatch.
Without the tuned input you have to put an 'antenna tuner' between the
transmitter and amp input for many of the solid state rigs to eliminate
the missmatch problem.

Also most amps will have lower distortion to the output signal if a
tuned input isused.

Mark,
While I agree with you on the improper posting of FS/FA ads on this
newsgroup, the steps taken by this self-appointed "spam patrol" were much
more obnoxious than the original ads. It wasn't necessary to post his
"complaint" five times, and his totally bogus use of the email address
abuse@fcc.gov was not only fraudulent, but probably a violation of federal
law as well.
If I see an FS or FA ad here on this NG, I just ignore it. Certainly that's
preferable to compounding the problem by posting five put-downs, which were
more likely to ruin the NG than the original ads. The ad posters may be
stupid, but posting BS replies to the ads is even more stupid.

Mark K5MAR

Okey I realize that if you have items for sale you want to get as much exposure as possible however I can't stand the number of people who list their ebay auction stuff on here as well. If you want to auction it fine but don't go listing your price on here as if that is what you can get it for. It is deceit and furthermore usually most items sold on ebay go for more than you could get them for by keeping an eye on the Newsgroup or classifieds.

Auction it .. fine ! Just don't list the price here as if that is what you can get it for.

Gary (My Opinion)

Cell phones operating at 1800 MHz are either using CDMA or TDMA
for transmission. In the case of CDMA, the signal is spread over a
wide bandwidth - there's no single frequency for the counter to count.
In the case of TDMA, there *is* a single carrier frequency, but the
transmitter is pulsed on and off, probably not remaining on long enough
for the counter to measure it accurately.

Ordinary frequency counters are mainly useful for measuring continuous
transmissions that have a well-defined carrier frequency, such as the
FM signals radiated by analog cell phones, older police/fire/etc
handhelds, baby monitors, older cordless phones, and so on.

Source record: 74292

I have an Icom SM-8 Mic that can be connected to two traseivers. Hooking it to my IC-746 is not problem, but I want to also us it with my Yaesu FT-840. The Icom plug works fine, but the wiring is different. Here's the pin out for both radios. How do I switch the wires to make the Icom mic work on the Yaesu?

Icom
1 Mic input
2 +8 V DC output
3 Freq up/down
4 Main readout Squelch switch
5 PTT
6 GND (PTT)
7 GND (Mic)
8 AF Output

Yaesu
1 Green (looks like goes to UP)
2 Yellow (goes to Dwn and Up
3 Blue (Dwn)
4 Brown (FST)
5 Orange (FST)
6 Red (PTT)
7 Looks like to cable shield
8 White (200 ohms)

This is probably intermod, the mixing of two other signals inside the front end of your receiver or perhaps somewhere else. If you change to a small or indoor antenna the intermod will probably go away, as it takes strong signals to overload the mixers. Alternately, you could install a filter in the line to filter out signals outside the 2M band. If you know the frequencies of the offending signals you could make a simple trap out of coax to filter them out. Look it up in a good ham radio book. Good luck.

I think the radio is more $ at HRO according to their web site but they do include free shipping and I think they have a 8 -10 day return/exchange privelage if the radio you purchased dies on you as long as you didn't modify the radio. I think other Ham stores have the policy "You bought it and you are stuck with it..go deal with the manufacturer". I don't have any ties to HRO or any other store.

I bought this radio at a pawn shop, and it didn't come with the manual or specs. It's battery is 9.6V, so that's what I'm feeding it with on the DC input. Is this input rated at 9.6V, or is it set up for automotive use (12-13.9V)?
Also, how does the Auto Power Off function work? When's it supposed to shut off?
And can someone explain to me how I'm supposed to use the autodial and it's presets when it won't work while keying the mic?
If anyone has a manual for this radio, please let me know. I have other ?'s!
Thank you and 73's,
Scott Moore, N0XMZ

>supposedly in good condition with everything working. Please email
>KB3EDH@aol.com

I owned a Triton IV (early labeled model 540) from 1977 to 1998, when
I replaced it with an Omni-D.

The 540 is/was a great radio - especially for CW.
The optional (I hope you have it??) audio CW filter works great, the
receiver is very sensitive and the QSK is excellent.
It always got excellent audio reports on SSB.
There is no SSB speech processor, but I never missed it.

When used with the Ten-Tec 262 series power supply that has an
electronic current limit, the rig was almost indestructable.
The finals rarely failed. In all the years I owned it the only
failures or service items was a bad final bias diode, two dial
lights and restringing the dial cord after the elastic failed.
Parts are still available from Ten-Tec at minimal cost.

How many other ham manufacturers still support their rigs
22 years after they have been discontinued?

For a no-frills rig, it's an excellent unit and still the standard
rig for serious CW ops (a picture of it was featured in QST
around 6 months ago).

Values of the rig would be about $200 to $300 with another
$50 extra for a 252/262 series power supply.

Hi:
A friend who has a boat asked me to look at his marine radio, it was broken. The problem is the salt water and salt air had corroded the 12 volt leads and connector. Replacing them is easy but I noticed crimp connectors on the 12 volt line. Is there a reason not to use solder on marine equipment? Thank you in advance.

Source record: 74156

I have a problem with my TR-9130 rig. It SEEMS that the microcontroller is continually resetting at start up, but the RF-circuitry is working fine. Symptoms: flashing LED-display when squelch is open, dim or unlit segments when squelch is closed...

What did I do so far?

1. I re-soldered most of the connections, but the through-platings are hard to do; the solder everytime "blows up" into a bulb... Nevertheless, this seemed to help a couple of days...

2. The problem turned up again... With the heat-gun and freeze-spray, I could create the problem, and make it disappear... Maybe leaking capacitors? I changed ALL electrolytic capacitors... Didn't help...

3. Some extra observations: in the beginning the problem went away after the TRX heated up (10-20 minutes). Now it doesn't even disappear anymore, and what's more: the vfo-dial to tune does not respond anymore.
Power supply on the input of the (series-)regulators seems ok (13.78V), but when the display is flashing (reset of µC???), the supply voltage to the µC itself is only 3.2V, where it should be 5.2V if the TRX is properly working...

Anyone had similar problems, and somebody knows what to do???

Thanks in advance, please mail me your experiences...

Gary (and group),

I don't care much for those listings on here, either. When I want to go to auction I can find ebay, boneyard, etc. It is only my opinion that pointers to ebay etc are pretty close to off-topic. Rather than file law suits, or take potshots at those folks I just filter out those listings. Its easy enough to do.

I'm happy. Ebay hopefuls are happy. The 'silent majority' who seem to enjoy that kind of listing are happy.

Check out the filters on your reader and enjoy life more. There are better things in life than criticizing amateur marketers.

The jack on the radio will take direct 12V input & also slow charge the 5W 9.6V battery. All the things written above the # keys in blue are accessed by hitting the "function" key while pressing that # key. APO must be set by trhe user. Programming software/cable is available from RT systems. Turning on the keylock ("KL") & then hitting " #, 6 , 3 , 1 " will lock the radio into a channel-only commercial display mode. hit the sequence again to return to normal. .....hope that helps a little.....

The waterproof extention cord for the soldering gun gets unwieldy while
at sea?
</rim shot>

They're used for the same reasons as for cars -- quick, cheap, you don't
burn yourself, you don't burn a hole in the bottom of your boat, no
skill/talent required, it's only 12v, etc.

Pete

It's possible that they used the crimp for vibration purposes. Companies like Mallory and Holley recommend installing their ignitions systems with crimp connectors when they're being used in a high-vibration environment. Solder connections are not flexible and tend to be the "weak link" in the chain. I have found this to be true when using two-way radio equipment in a mining environment.
One bad thing about crimp connections is that they tend to corrode easier and faster.

Dan

FS:Icom IC-2350H

IC-2350H 2M/440 MHz Dual Band Mobile

Dimensions: 5.5 (W), 1.6 (H), 8.1 (D), 2.6 lb
2 M (50 W) 440 MHz (35 W)
Wide Band Rx (118 MHz - 174 MHz)
110 Memory Channels
PL Encode Built-in
Built-in Duplexer
Auto Repeater Shift
Seven Scan Modes, including Fast Scan

IC-2350H SPECIFICATIONS

GENERAL
Frequency Coverage:

VHF:
Transmit: 144.00-148.00 MHz
Receive: 118-174* MHz (*guaranteed 144-148)
UHF: 440.00-450.00 MHz
Mode: FM
Number of memory channels: 110 (100 regular, 2 call, 4 scratch pads and 4 scan edges)
Antenna Impedance: 50 ohms (nominal)
Power Supply Requirement: 13.8 V DC+/-15% (11.5 A)
Usable Temperature Range: -10°C to +60°C; +14°F to +140°F
Frequency stability: Less than ±10 ppm
Tuning step increment: 5, 10, 12.5, 15, 20, 25, 30 or 50 kHz
Current Drain (at 13.8 V DC):
Transmit at high power: 11.5 A (VHF); 11 A (UHF)
Receive: 1.2 A (squelched); 1.8 A (max. audio output)
Dimensions (projections not included): 140(W) x 40(H) x 204.5(D) mm, 5.5(W) x 1.6(H) x 8.06 (D) in
Weight: 1.2 kg; 2.6 lb.

TRANSMITTER
Output Power:
VHF: 50 W, 10 W, 5 W selectable
UHF: 35 W, 10 W, 5 W selectable
Modulation System: Variable reactance frequency modulation
Max. Frequency Deviation: ±5.0 kHz
Spurious Emissions: Less than -60 dB
Microphone Impedance: 600 ohms

RECEIVER
Receive System: Double conversion superheterodyne
Intermediate Frequencies:
VHF: 1st 17.2 MHz; 2nd 455 kHz
UHF: 1st 30.85 MHz; 2nd 455 kHz
Sensitivity: Less than 0.16 ?V (typical) for 12 dB SINAD
Squelch sensitivity: 0.13 ?V (at threshold)
Spurious and Image Rejection Ratio: More than 60 dB
Audio Output Power: More than 2.4 W at 10% distortion with an 8 ohms load.

This one is used but never abused (8+ easy). I bought it new four years ago and it has functioned exceptionally well ever since.

No mods have been applied

Reason for selling. Make room in the truck for the FT-100

I work for the rail industry and along the tracks we have high moisture and extreme vibration and over the years crimp connections have been the connection of choice. Some people use a combination however which is crimp the connection and where the wire protrudes past the crimp area onto the lug of the contact solder is applied and across the crimp but not behind the wire so as to retain flexability. My recomendation is to do this however go one step further. Get some heat shrink and some silicon and make you as water/air tight connection you can and this should eliminate your problems.

4272. FS or Trade: Test & Misc. Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-05 00:00:00 UTC
From: mystique224@home.com
Message-ID: <398C7041.CD47D5AA@home.com>
Source record: 74181

I have the following:

- HP 403B Voltmeter with complete manual (Ex. cond.) $75
- Eico DMC-1 Capacitance Meter (Ex. cond.) $25
- Heathkit Frequency Counter 225MHz (Ex. cond.) $85
- Eico Power Supply 0-30 V @ 1A $10 (only goes up to about 22V
though, think someone repaired it before and modified it with a
different part) Works fine though
- RLC Variable Attenuator 0-120 dB in 10 dB steps, 50 ohm BNC
connectors, Ex.
cond. $70, Retails for $130
- Two BIRD Wattmeter Slugs 50-125MHz 50W & 100-250MHz 50W Both Used but
in Ex.cond. Both for $85
- One brand new (unused) Eimac 3CX800A7 Power Triode Vacuum Tube Bought
new for $329 will sell for $225

That is pretty much the list. They are pretty much items that I have
bought at one time and rarely use anymore. The tube was bought to retube
an HF amplifier in which the person owning it changed their mind. All
items
will be shipped 2-3 Day priority mail. Sorry I have received too many
beat up
boxes via UPS and don't use their business. Buyer pays exact shipping
charges
plus $3.00 for insurance. I will guarantee all items non DOA unless
insurance
is buyer denies insurance. Pics are available upon request. Email if you
have
any further questions.
Thanks,
James

P.S. - I will also except trade offers.

First of all if you can get that angry as your reply seems to indicate at
just an opinion posted here then there is a lot more wrong than just my
opinion. My objection to the auctions is not their presence or people
trying to sell equipment but rather when they list a price which is most
likely outdated by the time someone reads it and leads them to think it is a
better deal than it is. Trust me man if your anger gets up that easy at me
then I have more control over you than you do .. think about it. Like ham
radio this Newsgroup is for a purpose and while that is amateur radio
equipment auctions included no one should get so tore up over it that they
let another cause them anger. It was my opinion, as you said I am not God
so relax

4277. Using all mode receivers to surf subcarriers on FM radio stations

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-05 00:00:00 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <398CA535.B75B8A2A@ix.netcom.com>
Source record: 74186
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.equipment

Listening to subcarriers on FM broadcast stations with the TS440S and similar radios:

As the TS440S can receive signals all the way down to 30KHz all modes (AM, FM, USB, LSB, CW), you can "surf" the SCA subcarriers on the FM broadcast band. Also those of TV stations on their sound broadcasts.

What you need to do is tap the output of the main FM carrier detector before the deemphasis circuit in an FM broadcast band radio. A cheapie clock radio will do at first. The deemphasis circuit is usually an RC low pass
filter. One way to "hunt" for this point is to hook up an audio amplifier to a
test probe, and find a node on the circuit board that has main channel broadcast audio with lots of treble as compared to that found at the top of the
volume control. One this spot has been identified, connect a 0.01uF cap in
series with a 1K resistor, and that then in turn feeds the center conductor of
a length of thin coax. The coax ground connects to the radio ground. The

other end of the coax connects to the TS440S antenna input. Check that the
FM broadcast radio still plays, as the coax cable is now loaded with 50 ohms
impedance.

Disconnect the mic on the TS440S so you don't accidently transmit into the
FM radio! Tune in 38KHz in USB mode. Now tune around on the FM broadcast radio. You should be able to hear the "difference" (L-R) audio

signal of FM stereo stations. You should be able to notice the usual lack of
vocals in most songs, as compared to the FM broadcast radio's mono speaker output. Assuming success, try tuning in 67KHz FM mode on the TS440S. Now tune around on the FM broadcast radio. You may find various foreign language programs and data transmissions. Also try 92KHz FM on the TS440S. Expect about 10% of FM broadcast stations to have subcarriers. Don't overlook the college radio subband from 88 to 92 MHz.

You're essentially "surfing" the radio specturm in two dimensions, one "axis" is the FM broadcast band, and the other is each FM station's subcarrier signal spectrum.

I have run into this corrosion problem B-4 on 6x6s and regular trucks.

Get some lithium grease,(High quality lube grease), after the connector is installed, spread the grease liberally on the terminals and the wires. Make sure the grease covers all of the crimp connector, and ALL of the the bare wire. The grease should extened onto and over the insulation of the wire.

This is messy, but it is effective.

4279. FS or FS + trade QRO HF-2500DX QSK Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-05 00:00:00 UTC
From: Larry Anderson <w6lar@cybertime.net>
Message-ID: <398CB014.14D72B1B@cybertime.net>
Source record: 74188

Still offering the QRO HF-2500DX QSK amplifier for sale. New $2895, new asking price is $2000 or trade for Heathkit SB-220 amp plus $1500 cash. Condition is very good. Less than 50 op hours. I am original owner. Buyer pays shipping. If trade, SB-220 must be in excellent condition with low hours on tubes.
Only flaw on HF-2500 are minor scratchs on top cover front to back edges. Uses 2 ea 4CX800A tubes, grid driven. Completely self contained with ALL power supply components inside. All Peter Dahl inside with QSK Vac relay. Easily does 1500W plus with 15 to 50 watts drive depending on

band. Fully WARC band compatable. I've driven it over 2500W into dumy load to see what it can do. But at 1500W its just idling along. Two speed fan. Screen current fault circuit.

It's hard for me to believe that the next president of the United States will be George W. Bush or Al Gore. Both remind me of Hollywood movies that have been focus-grouped to death: they push all the appropriate buttons, but have zero original vision. Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could give Al & George a good run for their money. At 65, Nader isn't running as fast as he used to, and the Green Party doesn't exactly have its platform figured out, but I think they have what it takes to inject a dose of radical democracy into the race. Unlike the two Tweedles, Nader is real, he stands for decency and common sense and he still commands a lot of respect in progressive and activist circles. And hidden behind the rainbow coalition of lefties, eco-feminists and crazies, the Green Party does have some great ideas. It's the only party that stands for the Tobin Tax, true cost markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine

sticker (17K) or a Banner ad (5K):

==========

What it Means to be Green

"At the root of all Green political action is nonviolence, starting with how we live our lives, taking small, unilateral steps toward peace in everything we do. Green politics requires us to be both tender and subversive. Affirming tenderness as a political value is already subversive. In Green politics, we practice tenderness in relations with others; in caring for ideas, art, language, and culture; and in cherishing and protecting the Earth. To think Green is to build solidarity with those working for social justice and human rights everywhere, not bound by ideologies."

-Petra Kelly

Hello Gary,

Well I for one, think its an appropriate place for the placing annoucements of any ham related gear available to everyone. How I choose to sell something shouldn't be of interest to you past your own interest. Please don't try promote your view of how this newsgroup should be, certainly not at expense of the rest of us.

I listed my radio here for two weeks, without a single reply, in one week I had 700 hits and I ended up with more than I was asking for on Ebay. So I think that's the reason for your angry, its cutting into your pocketbook. And that's my opinion,

: Andrew R Mitz wrote:
: But, wouldn't the fact that the driver and API layers are running on a
: several hundred Mhz machine make their delay negligable compared to the
: slower transfer rate of the Internet?

Yes. You are probably right.

:
: I have, as time has allowed, been working on an netwoek type interface
: using Linux. I have a couple of programs on my web site for controlling
: Kenwood TS140/440/940's. I have a 140. One in written in C using Xforms
: and the other is in Tcl/Tk and runs on Linux, Win95, etc. any machine
: with a Tcl/Tk 8.0 port.
: My first attempt is just a simple network/serial port pipeline. Next
: step is to have a more portable type API server and driver. As time
: allows that is.

Regarding the interface, the human interface should be separate from
the API. I, too, have written network centric interface. Mine
is in Java and was described in the February 1998 issue of QST.
The goal here is to build a common API layer between the hardware
and the rest of the system.

Leland C. Scott (no-spam@junk-mail.net) wrote:
: > Too much layering, or an incomplete API can interfere with smooth remote
: > radio control even if the other problems (delays) in the system are
: > solved. Some method of issuing low-level commands might be a part of
: > the specification.
:
: That's how software gets broken! The whole point with GOOD software
: engineering practice is to keep each module, and layer, isolated from one
: another. The communication should ONLY be through the exported API. Each
: module should not depend on any data structures, internal routines, etc.
: that are not meant to be used publicly in any other module. This is what is
: called data hiding, another software engineering principle.
:
: If a programmer does an end run around the system by issuing "low level
: commands" not supported by the API, then if the hardware, or the internal
: software, should change then the application fails! Time and time again I
: hear about programmers who do this. Then later when something changes
: internally that their software depended they get bit in the behind. They
: know better. When a good programer does this its because its the "easy and
: quick way" to fix something, instead of spending a little more time to
: design a better solution.
:
: By sticking to a standard published API the manufactures, and programmers,
: are then free to make any necessary changes to code modules, so long as the
: specifications for the exported API remain the same. That is the whole point
: of having a standard API, and sticking with it. Every computer science
: course, book, etc. should hammer people over the head until they finally
: realize its good solid software engineering practice!
:
: If there is a need to issue a low level command not supported by the
: standard API, that should be a big clue the API requirements were not
: completely analyzed, and specified, in the design stage.

Exactly. Which is why fast, hard real-time systems often throw the
existing APIs out the window. Interactively controlling a receiver
frequency is a difficult real-time issue. There must be options for
low-latency interactions in the API. There must also be minimal overhead
for moving data between layers or an interactive application will
fail. Computer science books don't write working real-time systems.
They just discuss them. After reading the books, some poor sole
has to make it all work.

I feel I'm geting trash off the AC power lines and its getting into
my audio equipment!!

Instead of going the Ferrite Block route...how about using a computer
APC/UPS battery backup system........
Am I reading the tech write-ups correctly...when your plugged into the
battery side of the APC, the systems works as follows....
Your AC outlet feeds the APC ..the APC then converts the AC to
DC...goes through the battery then converts the DC back to AC and then
feeds/powers whatever you have plugged into the output side with
clean-conditioned AC...so if this is true the RFI on the AC lines is
not going to get through the battery so my problem ends there!!
True or False????

Bill

4300. FA: Radio Shack HTX-10 10 Meter Transceiver Like New!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-06 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <398dc7b8.329784745@news.nvbell.net>
Source record: 74056

I have a Like New Radio Shack HTX-10 10 Meter Transceiver for auction.
This is the NEWER model, not the older HTX-100. This is all-mode and
has a compact size. It is in excellent condition. Comes with Hand Mic,
Power Cord, Mobile Bracket and Manual.

Very Low starting price and there is NO Reserve!

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=402507092

Thank You & 73,

Mike KQ6MU

4301. FA: RARE Standard C288A 220 MHz HT Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-06 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <398dc7d5.329814049@news.nvbell.net>
Source record: 74057

I have a nice Standard C288A 220 MHz HT for auction. This is in great condition. Receives 100-249.995 MHz, Transmits 222-224.995 MHz. 5 Watts output on High Power. Comes with Rubber Duck, Ni-Cad Rechargeable Battery Pack, Battery charger and battery charger stand, plus the manual.

The starting bid is very low and there is NO Reserve!

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=402597040

Thank You & 73,

Mike KQ6MU

4302. Re: Using all mode receivers to surf subcarriers on FM radio stations

Nope. As the original law was written, monitoring of all subcarriers was forbidden. When it was pointed out to the KongressKlunks that TV sound and FM Stereo worked on subcarriers, the law was rewritten to exclude only those subcarriers and the standard FM subcarrier for Public Service (reading for the blind mostly) at 91 KHz. The biggest SCA user was Muzak (67KHz) and since they went microwave the impetus to beat up on people monitoring subcarriers went away but it's still illegal.

Monitoring studio feeds is illegal too. These are spread out all over so it'd be difficult to block a scanner for this.

Some old satellite 2 GHz TVRO receivers with the big dishes (The older ones - the newer ones fell under the EPCA.) had a subcarrier output jack that had some interesting stuff on it that you could listen to with an all-band receiver.

I have no idea what's possible with the newest satellite TVROs - the 18" dish kind.

Some cable systems have strange subcarrier stuff running around too.

Regardless, it's still bad legislation, passed for bad reasons, and as
such, should be ignored anytime possible in the hope of getting people
to wake up and realize that it IS bad legislation, and get it removed.

Here's my stance:
If somebody's gonna toss it up in the air, beam it through my house, my
body, my cat, or whatever, then I've got every right in the world to use
my <insert any of several devices, modified or otherwise, here> to
intercept it. If you don't like me knowing what it is you're
saying/showing, then you better use a secure encryption method,
otherwise, I consider it fair game.

You're the one standing there screming it at the top of your electronic
lungs for anyone with the equipment/know-how to hear. Don't come crying
to me about "privacy" concerns when you don't do anything to keep it
private, short of lobbying for a ridiculous, unenforcable law. If you
want what you're transmitting to be private, then you either need to
encrypt it securely, or don't *braodcast* it in the first place.

I believe Matt's description is essentially correct. These units use the DC supply as the back-up only. FYI, a recent poster to this group mentioned a terrible RFI problem with his APC unit (acknowledged by APC tech support) present in his APC "Office" unit. APC tech support told him that only the high-end (i.e., more expensive) units have decent RFI/EMI suppression. Regards, Randy.

Matt Erickson <kk5dr@hotmail.com> wrote in message news:398DD6E8.F048051F@hotmail.com...
Not entirely correct. The "UPS", charges the battery when the AC main is normal, during use. When the AC main voltage drops below a preset level, a relay switches the UPS over to the battery, that supplies power to and AC converter. There are usually some surge suppression, and RFI, noise filtering in a UPS, but not nearly enough, to get rid of line noise, & variations in line voltage.
I would say that you are in need of a "Line conditioner", which filters, isolates, and regulates the AC voltage going to the equipment hooked up to it.

Bill wrote:
I feel I'm geting trash off the AC power lines and its getting into my audio equipment!!
Instead of going the Ferrite Block route...how about using a computer APC/UPS battery backup system.....
Am I reading the tech write-ups correctly...when your plugged into the battery side of the APC, the systems works as follows....
Your AC outlet feeds the APC ..the APC then converts the AC to DC...goes through the battery then converts the DC back to AC and then feeds/powers whatever you have plugged into the output side with clean-conditioned AC...so if this is true the RFI on the AC lines is not going to get through the battery so my problem ends there!!
True or False????

Actaully, the more expensice units, termed "ONLINE" UPS units, actually work like Bill described, only the cheaper ones actually use a relay type circuit to switch between 120 and battery, the online units account for a much smoother and quicker transfer between power out and battery power

It is only illegal to use SCA signals at a business or public place
without paying the provider. SCA is a leased service, rarely provided
by the station delivering the signal. You can use it it home, but the
bandwidth and noise figures are poor, compared to the baseband signal.

The older systems were at 4 GHz, not 2 Ghz. The same applied to the
subcarriers as FM broadcast. Not legal in a public place, or business
location.

That's correct. And subcarriers on FM are not totally unused. Some
stations have several. Most of the programming is available by
subscription, as was the Physicians Radio Network, with receivers
tuned to the station in question, and the correct subcarrier
provided as part of the subscription service.

So, in some cases, subcarrier monitoring is not only illegal, but
it is theft of service.

This is simply not true. Not since the latest revisions of
communications law. It is illegal to monitor SCA without a lease
agreement, or subscription, no matter where the monitoring is done.

> SCA is a leased service, rarely provided
> by the station delivering the signal. You can use it it home,

No, you may not legally do so at home.

> but the
> bandwidth and noise figures are poor,

Yes, they can be pretty dreadful. And if the station is processing
with hard composite clipping, the receiver hears baseband transients
in the SCA audio.

We carried PRN for years on one station I worked. Composite
clipping was all the rage throughout hte market. But composite
clippers were not very sophisticated, so we daily got complaints
about the cymbal crashes that punctuated a treatise on pancreatic
surgery, or how to a D & C and still make you tee-time. It wasn't
very engaging programming.

And PRN did crack down on pirates. I don't have the first clue how
they caught them, but we'd get the reports every month, the number
of non subscribers caught listening.

Nope. Not me.

I think this sucks too. The only thing I find astonishing is that there are still scanners and a monitoring public. We're going to go through a similar thing with scanners, etc. as the gun folks are currently enjoying with their hobby. I'm waiting for the first activist to proclaim a scanner or a short-wave radio hurt a kid...

Kinda OT but see this: http://www.frenchu.com/tpg/drill.html

4318. Kenwood vs. Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-06 00:00:00 UTC

Hello everyone. I have a question. I am interested in getting a new ht. I looked at the Kenwood TH-G71 and noticed that when you are using the recharger that comes with the radio, the recharger outlet is on the ht. In the past, the outlets where on the batteries. I was also looking at the Yaesu FT-50. Are recharging the batteries on that model done in the similar way?

Thank you,
Scorpioeo@aol.com

What is a good way to attach an external antenna to this thing, or more importantly, would it be worth it? Should I make an adapter for it with a stud to BNC or PL 259 connector on it? Thanks

I have a VX5 Yaesu and the charging port is in the radio, where I prefer it.
The reason I believe for this is the ultra compact size of the new batteries
and by not putting the charging portion in the batter it saves space.
Don't know about the particular radio you are asking about though sorry.

>not going to get through the battery so my problem ends there!!
>True or False????

I believe that is false. I have an APC 600 Backup UPS. I'm looking at the block diagram from the owner's manual. In normal operation, the house AC goes through suppressors and then straight to my PC. Whether these suppressors are good enough to take out your "trash" I couldn't say.

Simultaneously, the AC is going into a second circuit; the AC travels through the suppressors, then a battery charger, then the battery, then the inverter, then a transformer, and finally to a transfer switch. If the house AC is interrupted, the transfer switch clicks over, and the battery circuit comes in and powers the PC. The battery will go for about 25 minutes with enough juice to power two Compaq DeskPro PCs.

This battery circuit appears to be in operation ONLY when the main house AC is interrupted or coming in at the wrong voltage.

(This is a higher quality 400-watt unit; I paid about $300-$350 for it five years ago. It's better than the cheapo APC units that are currently being sold for about $110, the so-called Back-Office units.)

You might look at a "line conditioner," not a backup UPS. The line conditioner, as I understand it, will even out voltage irregularities and give you "purer" AC.

APC puts out a nice, informative technical newsletter every month or so. You might go to their web site to see what you can find out about their various units. Expect to spend several hundred dollars to get something that will do you any good, especially if you're running your whole stereo system off it.

Or, hey, you can go to the stereo magazines, and buy one of those $500
power cords that are all the rage nowadays... :-)

4323. IC-729 advice needed, help!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-06 00:00:00 UTC
From: Ken Diaz <kenjd@email.msn.com>
Message-ID: <OlrjOiBAAHA.205@cpmsnbbsa09>
Source record: 74079

Hi, I'm thinking of picking up a super clean, low usage 729. I understand the IC-728 audio chain hisssssed like a frightened cat. And that Icom compounded the problem by introducing severe (!!) high frequency roll-off. I have acute hearing and fatigue quickly when using a headset with hissy audio. Does anyone know if the 729 suffers from the same problem as it's younger brother (728)?
I don't know, but perhaps they cleaned it up in the 729 (doubt it). Thanks in Advance, Ken, WB9YCJ/6

Well I might have most of my questions answered. I seem to have put most of the sheetmetal back where it belongs. I am missing the bottom plate of the tube cage and the blower. I have gotten more pieces of the puzzle, including the power supply. What luck. Mine is a desk top version. It sits in a 5 inch deep skirt. Don't know how there would be enough room for the blower. Sure wish the guy finds that blower or something. I'm so close.

If you had some mounting info on the blower. That would be great. Not sure if the console and desk would be the same... Need the value of the resistor that ties the B- to ground. Looks to be a 25 watt or so. reads open.

It is interesting to look at Sherwood's data on receivers. The R4C turns out to be at the bottom of the list in some respects (what Sherwood considers important in a receiver), but with his mods it goes to the top. The Ten Tec Corsair I is near the top, the Kenwood TS 830 is up there, and I think the OMNI V shows up in the upper reaches. Just an interesting comparison.

I have had a nice C-line here and I liked the receiver, other than some small quirks common to the R4C (the "crackling" sound, stuff like that). I had my Ten Tec OMNI VI next to it and often the selectivity of the OMNI VI really showed up the stock Drake. It is hard to compare sensitivity without instruments, they are both in the ballpark. I cannot tell you about "noise" from the receiver either, other than to say that the OMNI VI sounded a little "hissier" but copied the same signals, sometimes better than the Drake. The AGC and audio sections of the R4C were quite wonderful, the OMNI VI has slimmer audio coming from it (well, narrower filters too). I went in and changed the time constant of the OMNI VI (very easy) and it is smooth like the Drake now.

I don't think you'll be disappointed at all, but it really is a matter of taste in many respects. If you are near the central coast of California, come over and I'll show you how the rig works!

this is the java bean generic radio interface i came up with a couple years ago for what was going to be a java based contest logging program. the principle behind the interface in the java bean world is to define a minimum set of functions that a bean has to fill to fit into the framework. with this as the 'api' you could then impliment beans for specific radios, then each radio bean would be able to make use of a communication bean that had an interface that would let it talk to radios that could be on serial ports, networks, or any other type of port you wanted to write a communication bean for. the nice thing about 'java beans' is that they are modular. as long as you follow certain design processes they can be installed and customized at runtime, so by only publishing a set of interface requirements you could have many writers supplying small pieces that should all fit together and be interchangeable. the whole project kind of bogged down with the slow start of java, lack of tools in the beginning and other priorities. some of the high level design is still available on my web site at:
http://www.berkshire.net/~robbins/logger
there is an old prototype on there, i have continued to update it a bit but haven't had much time recently to really do anything with it. it doesn't actually talk to any radio since the stock java tools didn't include a serial port interface, there are/were some available as 3rd party libraries but were a bit pricey at the time i was working on this.

some advantages of java for something like this is that it is (relatively) platform independent, it has remote process capabilities for use over networks, and the 'beans' concept makes building modular systems nice.

```
public interface RadioInterface
{
public int getVFOCount(); //radio returns how many vfo's it has

public void setTXVFO(int vfo); //select a vfo to tx on
public int getTXVFO(); //radio return what vfo is currently selected for tx

public void setRXVFO(int vfo); //select a vfo to rx on
public int getRXVFO(); //radio return what vfo is selected for rx

public boolean isSplit(); //is split mode selected
public void setSplit(boolean split); //turn split mode on/off

public Frequency getFrequency(int vfo); //get freq from vfo
public Frequency getTXFrequency(); //get current tx freq being used
public Frequency getRXFrequency(); //get current rx freq being used

public void setFrequency(int vfo,Frequency newFrequency); //set freq in a vfo
public void frequencyUp(int vfo, int step); //step freq up in vfo by step
```

```
public void frequencyDown(int vfo, int step); //step freq down in vfo by step

public void setMode(int vfo, Mode newMode); //set vfo mode
public Mode getMode(int vfo); //get current vfo mode
public Mode getTXMode(); //get tx mode
public Mode getRXMode(); //get rx mode
public void modeUp(int vfo); //switch mode up (does this make sense??)
public void modeDown(int vfo); //switch mode down (does this make sense??)

public void setBand(int vfo,Band newBand); //set vfo band
public Band getBand(int vfo); //get current vfo band
public Band getTXBand(); //get tx band
public Band getRXBand(); //get rx band
public void bandUp(int vfo); //move vfo up one band
public void bandDown(int vfo); //move vfo down one band

}

4340. Help w/ MT500 Audio (Need Service Manual!)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-06 00:00:00 UTC
From: Shawn Reeves <kleptein@hotmail.com>
Message-ID: <klopos852jktts9ffq6gb8fooqcjg92b86@4ax.com>
Source record: 74107

I have a low band, 42-50 MT500 that has no audio... does anyone out there have the manual that they could either sell me or scan in the audio portion and email to me? The part number for the board is NUB6083A.. I have a lot of audio (about 1V) on Pin 6 of the big IC, but that's as far as I can get poking around. Any help would be appreciated...

But, wouldn't the fact that the driver and API layers are running on a
several hundred Mhz machine make their delay negligable compared to the
slower transfer rate of the Internet?

I have, as time has allowed, been working on an netwoek type interface
using Linux. I have a couple of programs on my web site for controlling
Kenwood TS140/440/940's. I have a 140. One in written in C using Xforms
and the other is in Tcl/Tk and runs on Linux, Win95, etc. any machine
with a Tcl/Tk 8.0 port.
My first attempt is just a simple network/serial port pipeline. Next
step is to have a more portable type API server and driver. As time
allows that is.

I don't think they, drivers, will do that. Almost all of the delays are in
the routing of the datagrams through the different routers on a network.

> Too much layering, or an incomplete API can interfere with smooth remote
> radio control even if the other problems (delays) in the system are
> solved. Some method of issuing low-level commands might be a part of
> the specification.

That's how software gets broken! The whole point with GOOD software
engineering practice is to keep each module, and layer, isolated from one

another. The communication should ONLY be through the exported API. Each module should not depend on any data structures, internal routines, etc. that are not meant to be used publicly in any other module. This is what is called data hiding, another software engineering principle.

If a programmer does an end run around the system by issuing "low level commands" not supported by the API, then if the hardware, or the internal software, should change then the application fails! Time and time again I hear about programmers who do this. Then later when something changes internally that their software depended they get bit in the behind. They know better. When a good programer does this its because its the "easy and quick way" to fix something, instead of spending a little more time to design a better solution.

By sticking to a standard published API the manufactures, and programmers, are then free to make any necessary changes to code modules, so long as the specifications for the exported API remain the same. That is the whole point of having a standard API, and sticking with it. Every computer science course, book, etc. should hammer people over the head until they finally realize its good solid software engineering practice!

If there is a need to issue a low level command not supported by the standard API, that should be a big clue the API requirements were not completely analyzed, and specified, in the design stage.

> disadvanages:
>
> 1. Must live on the same system.

Nope. There are applications that run on a user's PC which issues
Remote-Procedure-Calls to a server somewhere else on a network, or even a
different network for example.

The company I work for has the user interface software, for payroll;
inventory; etc, running on a user's PC. The interface software then uses
RPC's to call the database application running on the server. The user's PC
does not care where that server is located either.

> 2. Must be loosely or tightly linked with the application

Well that is the point of having a standard API. The application talks to
the API to do whatever it needs with the hardware.

> 3. Language restrictions.

Nope. As long as the INTERFACE, meaning the size; type; and sequence, of the
arguments, and returned data are published, you can use almost any language
to access the API.

"David" <phochief@adelphia.net> wrote:
> I'm looking at a couple of used Astron power supplies
> and curious what the difference is between a "switching"
> power supply and "linear" one?

Linear and Switching describe the techniques used to perform voltage regulation.

Switching power supplies are smaller, lighter, and more effecient than linear supplies. Size and weight may be factors if you plan to move the supply around a lot. The circuit design is more complex on a switching supply and some specimens leak a bit of "switching noise" that may affect communications gear. I've heard that they can also produce an audible hum / whine as well as some fan noise that may be offensive in a quiet environment. I don't own one, so this is 2nd hand information - YMMV.

Linear supplies are more bulky and less effecient, requiring a large heat sink to keep operating temperatures in check. On the positive side, they are simpler in design and do not have the switching noise issue. The folks at HRO tell me that they sell considerably more linear supplies to hams and other radio enthusiests.

If you have a recent ARRL Handbook, check out the Power Supply section, there are both linear and switching power supply projects that include comments on the technology.

I have two Astron linear supplies in my shack, an RS-35M powering a Yaesu FT-847 and an RS-35A for a Mirage 5016 linear amplifier. Voltage remains constant under full load, and they're nice and quiet - both electonically and environmentally. The 35M includes voltage and amperage meters for an extra $10. I personally think the meters are worth the additional cost, but that's up to you.

> Would an RS-35A be a good choice for an Icom 756pro?

The 35A Should work fine as long as you don't intend to drive other equipment from the same supply -- The IC 758-PRO draws 23 amps at it's rated power of 100 watts, the Astron 35 amp supplies can handle a continuous load of 25 amps.

Hope this helps...

Hi Mike,

I had this same problem, no solution. The placement of the 10m tap is obviously the problem, but where it should go I'm not sure. I modd'ed my AL84 to take Svetlana EL509's, similar to the mod on the Svetlana website for the GL1000 (if I recall correctly), and am still having trouble tuning it on 10m. Unfortunately the amp is lower on the priority list than getting the tower up, so won't get back to it for a while.

What it looked like was that less inductance was needed than what was shown on the Ameritron spec. I finally just moved the tap to the input for the coil and it was close but still not right -- only got 200W out instead of about 350 or so expected (given that 10m is pretty much over the edge for those tubes). So tapping in closer to the coil input might do it for the stock tubes. Just don't burn up the tubes testing it!

Source record: 74126

how can i cut down on monitor r,f.

I get bad rf on 20 mtrs but if i drop down to 640x800 it seems to help but i will then pick up the rf again on say 17mtrs. i have tried most things ie ferrite rings etc on the cable that goes from the videocard to the monitor. The monitor itself does not cause rf when plugged in on its own it just when i hook it up to the videocard all hell breaks lose.

thanks for any help in advance
dee

4360. Icom IC 706MKIIG

Hello ,

can someone tell me where to find the power output adjustments on the mainboard of the Icom IC-706MKIIG and the diode to unblock the TX frequencies !

Thanks ,

Please sent your mail to : pa1dyk@amsat.org

Hi there

I will very shortly be coming over from Scotland to visit my Family.
Although I visit them every year, I have never found the time to visit or
look for a Ham store.

It so happens that I am on the lookout for a 10m mobile perhaps a Ranger or
Uniden.
I was thinking of picking one up whilst on vacation.

Does anyone know of a suitable retail outlet in the Waldorf area of
Maryland?

Thanks in advance

Drew

Message-ID: <W6ij5.59625$LE.291230@typhoon.we.rr.com>
Source record: 74146

I know what the features are but how do these three radios stack up against each other in terms of PERFORMANCE?

Ever since I received my license back in 1986, I've been running around with an HT on the seat of my car plugged into dual-band antenna on the trunk. I'd like to upgrade now to a mobile rig with some "ooomph" to it (I've long since been tired of my measly 5w) but I'd also like to finally get into HF now that I've got my General. It'd be nice to do it all in one nice compact installation, especially considering my Honda Civic ain't no Ford Excursion. Space is at a premium. Any of these three radios will do the job, however I know with the Alinco I'd lose the VHF/UHF and have to keep using the HT in the car. I'd rather not do that. However, if it turns out that it is a superior radio on HF to the other two, I'd consider that.

So, can these radios be ranked in order of performance, quality, ease of use, etc?

Thanks to all in advance.

Mark, KB6KGX

4382. FS or trade: Test & Misc. equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-06 00:00:00 UTC
From: mystique224@home.com
Message-ID: <398CB683.760B5B5@home.com>
Source record: 74196

I have the following:

- HP 403B Voltmeter with complete manual (Ex. cond.) $75
- Eico DMC-1 Capacitance Meter (Ex. cond.) $25
- Heathkit Frequency Counter 225MHz (Ex. cond.) $85
- Eico Power Supply 0-30 V @ 1A $10 (only goes up to about 22V
though, think someone repaired it before and modified it with a
different part) Works fine though
- RLC Variable Attenuator 0-120 dB in 10 dB steps, 50 ohm BNC
connectors, Ex.
cond. $70, Retails for $130
- Two BIRD Wattmeter Slugs 50-125MHz 50W & 100-250MHz 50W Both Used but
in Ex.cond. Both for $85 SOLD
- One brand new (unused) Eimac 3CX800A7 Power Triode Vacuum Tube Bought
new for $329 will sell for $225

That is pretty much the list. They are pretty much items that I have
bought at one time and rarely use anymore. The tube was bought to retube
an HF amplifier in which the person owning it changed their mind. All
items
will be shipped 2-3 Day priority mail. Sorry I have received too many
beat up
boxes via UPS and don't use their business. Buyer pays exact shipping
charges
plus $3.00 for insurance. I will guarantee all items non DOA unless
insurance
is denied by buyer. Pics are available upon request. Email if you
have
any further questions.
Thanks,
James

I would not say disagreements either, true, but we do have a different angle
of how we look at the problem. 8-))

As a another comment about a standard API using RPC's, Real Time OS, and
mixed language calling, etc., we are really talking about two issues here.

A standard API is a "design" issue ONLY. How that design is executed is an
"implementation" issue. These are not the same. We can have a bad design
implemented on a very fast system, or we can have a great design implemented
by a kid who can't program his way out of a paper bag. I think too many
people get these two concepts mixed up. If you get poor performance how can
one be so sure it is a design problem with the API, or the API concept it
self that is at fault?

I owned an Icom IC-R8500, and was very satisfied with it! The only thing
I'd like to see changed (if possible) is the band switching relays used. If
you scan across bands, you hear the clatter of little relays as it switches
between bands. It seems those electro-mechanical relays could be replaced
with newer technology, i.e.; photo-opto relays.
